HOLSTEIN COWS' MILK WILL MAKE YOUR BABY HAPPY AND STURDY.

A healthy baby is a good baby every time. Your baby will never be fretful if you keep it free from digestive troubles by using Holstein Cows' Milk.

Babies flourish and grow strong on Holstein milk because it is so much like breast milk—the food to which Nature has adapted the little stomachs of infants.

In Holstein milk, as in human milk, the cream or fat is divided into minute uniform globules less than half the size of those in common milk. So when Holstein milk reaches the stomach it acts just as human milk does. It forms small soft curds, flaky and easy to digest.

Holstein cows are large, healthy, full of vitality, exactly the kind of cows you would expect to give the most wholesome milk.

Holstein milk costs no more than ordinary milk. If your dealer cannot supply you, send us his name and we will help you secure a supply. At all events send for our free literature, it's full of good points about Infant Feeding.

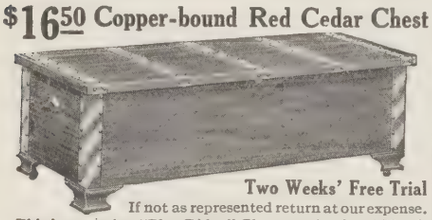
$16.50 Copper-bound Red Cedar Chest



Two Weeks' Free Trial
If not as represented return at our expense.

This is a genuine "Blue Ridge" Chest, made of real North Carolina Red Cedar and bound with 2-inch copper bands studded with round head colonial copper rivets. It is finished in the natural color, hand rubbed and polished. It will protect your furs and other garments from moths, mice, and insects and impart a fragrant sweet perfume to them, instead of the horrible smell of moth balls or camphor. It is also a very handsome piece of furniture. Size 40 x 19½ x 15. Shipped direct to you from the factory. Catalog free.

BLUE RIDGE RED CEDAR CO., Dept. T, Reidsville, N. C.
And 1654-1656 Long Beach Avenue, Los Angeles, Cal.

PERSONAL GLIMPSES

(*Continued from page* 1137)

me, and which spoke to me like a voice in the wilderness, I believe I should have gone insane.

About this time another prisoner was put into my cell. He was a Pole who had just been sentenced to eighteen years in Siberia. I saw at once that he was a man of the better class, and highly educated. From the first moment he entered the cell he talked about nothing but his innocence and the great injustice done him. I tried to comfort him, and told him the tragedy of my own life. He listened intently, and when I had finished he replied:

"Altho I am a Pole and a Christian I have lived among the Jews for years, and I know their religion, lives, and habits, also their secrets. And I know there is no such thing as ritual murder among them."

I thanked him with tears in my eyes, and a great friendship grew between us.

One day he was called before the prison governor, and when he returned I saw he was greatly excited. I asked the cause and he replied that while he did not wish to upset me he must tell the truth. He said he was called to the governor's office, where he was questioned by several high officials. The first question was, "Are you a Christian?" The Pole answered that he was, and he was then told, "As you are a Christian you must assist us to solve the murder of the Yushinsky boy by one who drinks our Christian blood." The Pole said he was very anxious to help, but he did not see how he could.

"Perhaps Beilis has told you he committed the murder," said the governor. "You are with him day and night, and perhaps his conscience has pricked him or maybe he talks in his sleep."

"I have listened very carefully," said the Pole, "and the only thing I have noticed are the bitter tears of the Jew. I am convinced my cellmate is an innocent man."

"You were not asked that," yelled the official. "If you want to, you can get evidence from a sleeping man as you can not get it from a single living soul awake."

Two days later the Pole was taken to Siberia, and I shall never forget our farewell.

The greatest joy I had felt since being imprisoned came three weeks later when the prison superintendent came to my cell one morning and told me that the hour of my trial was approaching. My prison clothes were taken away and the old blue suit, which I had not seen for two and a half years, was given to me, and I was told to make myself comfortable. The superintendent spoke so kindly that I could hardly realize that he was the same man who had previously treated me so abominably. He looked at me and evidently read my thoughts, for he said, "The truth will soon be known, and I see by the papers that there is no evidence against you, and that every one believes you will be set free. In that hour I want you to remember me kindly.

When I was led away by the soldiers I shall never forget my feelings as the great iron door in front of the prison swung open and I saw for the first time

The SIGN of a GROWING BUSINESS

This is the well-known trade-mark of Browne-Morse Quality Filing Cabinets. It carries an interesting message to the thinking man.

Browne-Morse Filing Cabinets fully meet the requirements of any business. Whether its needs are large or small, the Browne-Morse lines will supply them. Let a business grow as it will, Browne-Morse Cabinets keep pace with its growth.

Browne-Morse Cabinets

In quality Browne-Morse Filing Cabinets are unexcelled. A man buys a cabinet now, and another in ten years. The second will not put the first to shame—for Browne-Morse equipment is built to last. Every piece is made with as jealous care as if it were the only one to be produced.

Browne-Morse filing equipment seems to put new life into a business. The man who sits at a "Desk with Brains" is at the focus of his business and can inspire and direct its every move. His mind is relieved of the burden of detail and he devotes his energy to the higher problems. Such a business pulsates with life—and grows!

Write for information about the "Desk with Brains" and other Browne-Morse equipment. Learn why it has been adopted by so many rapidly growing businesses.

FRENCH CO., 253 Arch Street, Philadelphia, Pa.

after many long months the glories of the sky and the sunshine. I was quickly hustled into the prison van, and the sight of so many people, for a crowd of men, women, and children gathered to see me, frightened me. As I was driven through the streets I looked through the small grating in the side of the van and saw crowds of young men and young women students from the university, as well as hundreds of other persons who cheered and waved their hats as I passed by. When the crowd prest too close about the van the Cossacks drove them back with whips.

At last we arrived at the court-house and I was taken from the van. As I was led up the steps to the trial-room I said to myself, "God, oh, God, show them the truth and defend me!" With these words I went forward to face my accusers.

A CLEVER OREGON GIRL

MISS FERN HOBBS, private secretary to Governor Oswald West, of Oregon, was sent to Washington the other day as a missionary to convert Congress to the notion that it ought to adjust a number of tangles between the State and national governments in connection with the titles to public lands. She is said to be the first woman to represent a State government in such a capacity. Usually, high-priced lawyers are hired to do work of this kind. Miss Hobbs is a lawyer herself, but she regards lobbying for her State at the national capital as merely a part of her secretarial duties. When she arrived in Washington she immediately conferred with Senators Chamberlain and Lane, of her own State, and arranged for conferences with Secretary of the Interior Lane and the Congressional Committees with which she would have to deal. Knowing how to handle difficult political affairs has given her a considerable reputation in the Pacific Northwest, according to a Washington correspondent of the St. Louis *Post Dispatch*, who tells about her uphill struggle to a position of distinction:

Miss Hobbs's salary as the Governor's private secretary is $3,000 a year. She was appointed to that place last June, having previously been the Governor's stenographer.

In addition to being one of the highest-salaried women in the public service, Miss Hobbs can lay claim to another distinction for one in her position—youth. No other woman, and probably but few men, has attained such an important position in the course of twenty-seven years, which is her age.

She is decidedly a self-made woman, having fought her way up the ladder of success, carrying burdens at times that would have discouraged a less determined person.

A few days after she took her new position as private secretary to Governor West, she was admitted to the practise of law,

THE TOLEDO METAL FURNITURE CO., 2391 Dorr St., TOLEDO, OHIO

after having just been graduated from the law department of Willamette University in Oregon. It was a laurel won by dint of hard work and a spirit that does not falter. She studied law while other young women attended parties, balls, and theaters. Yet she is young, girlish, and a jolly companion. There is nothing long-faced or old-maidish about her. She is pretty and is popular at the Oregon capital. She is one of the "boys," and by her close friends is called Hobbs, without any prefix.

She was born in Nebraska. At the age of six her parents moved to Salt Lake City, Utah, where she lived for twelve years and finished the high-school course.

Then her father met with serious financial reverses and she came to Oregon to make her own way in the world and help support her brothers and sisters. For a time she was a governess in the home of J. Wesley Ladd in Portland. But she wanted to get out in the commercial world, so she bought a typewriter and a book on stenography and in spare moments mastered them.

It was not long until she was the private stenographer for the President of the Title Guarantee and Trust Co., of Portland, in which the Ladds were interested. While there she had what she says was the most trying experience of her life. As confidante of the president of the institution, she went through the storm of a bank failure and investigation. And it was the loyalty, pluck, and spirit displayed during those turbulent weeks that opened the way for her to win her $3,000 position.

All this time she was stenographer in the bank she also kept house for her younger brother and sister, both of whom she put through school, and on the side studied law. Her ambition had not been satisfied with the attainment of stenography.

When the trust company failed there was on deposit in it a large sum of the common school fund of the State. Governor Chamberlain appointed Ben. W. Olcott, new Secretary of State, to represent the State in the investigation of the bank's affairs. When Olcott reached the intimate papers and documents of the company's head, Miss Hobbs, who was then employed as stenographer to the bank's receiver, did not hide her dislike of the man who was trying to find something wrong with the transactions of her former employer. Her dislike of him and her loyalty to and spirited defense of the bank caused Olcott to take particular notice of her.

One day he met Judge Martin L. Pipes, her law tutor.

"What do you know about that little girl with the light brown hair in your law class, Judge?" asked Olcott.

"The one with the glasses?"

"Yes."

"I don't recall her name," said Judge Pipes, "but I know she is one of the brightest students in my class. She knows more law now than half the lawyers in Portland."

When the bank investigation was over, Miss Hobbs secured a position with the Ladd Estate Co., one of the wealthiest corporations in Oregon, and Olcott, a little later became campaign manager for Oswald West, candidate for Governor.

West was elected, and shortly before the time for him to take office Olcott asked him if he had any one in mind for his

Only the Tree-Ripened Oranges and Grapefruit are Sold under this Mark

Only nature can ripen oranges and grapefruit successfully—man's efforts to imitate her processes always have failed.

Nature's way is to ripen the fruit on the tree—she holds the oranges and grapefruit there until they have become sweet and juicy.

Sometimes men try to beat out nature by picking the fruit green and sweating it until the skin turns yellow. Then the orange or grapefruit *looks* ripe but it remains immature inside—the pulp will be dry and stringy and the juice flat and sour. It isn't fruit good to eat.

The Florida Citrus Exchange, a co-operative, non-profit making association of growers, markets only tree-ripened fruit. The members are pledged to leave their oranges and grapefruit growing on the trees until nature has converted the citric acid into sugar and has made the fruit healthful and delicious.

Your guarantee of tree-ripened, sweet, juicy, well-flavored citrus fruits is the mark—in red on boxes and wrappers—of the FLORIDA CITRUS EXCHANGE. Tell your dealer that you want Exchange fruit—that while other oranges and grapefruit *may* be good; those with the red mark of the Exchange on the boxes and wrappers is *sure* to be. Should you have any trouble in getting this fruit, please write to Florida Citrus Exchange, general northern office, Central Trust Bldg., Pittsburg, Pa.

CONVERSATION

What To Say and How To Say It

A new and widely commended book
By MARY GREER CONKLIN

"Books like this perfectly delightful one, simply thrill one with the imaginary joys of conversation, real conversation, not breathless chatter or the martyrdom of enduring having somebody talk when you want to, but a fair and even deal, heart and mind alert, and a companion for whose opinions you really care. This eminently intelligent book has so much that is good sense, and so much valuable advice to give that it warms the heart and stirs the imagination."—*Elizabeth Daingerfield, in the Herald, Lexington, Ky.*

"People who are perplexed over this necessary but difficult aspect of social life, will find sensible and valuable suggestions in this book."—*The Standard, Chicago, Ill.*

"'Conversation' shows that its author has thought deeply concerning her theme, and followed many lines in her endeavor to ascertain why talk is so seldom worth while."—*Detroit Free Press.*

12mo, cloth, 75c net; by mail 82c

FUNK & WAGNALLS COMPANY, 354-360 Fourth Ave., New York, N. Y.

private stenographer. The Governor-elect had not.

"I know a girl who will fill the bill in every particular," said Olcott, who sent for Miss Hobbs and introduced her to the Governor on the day he took the oath of office in January, 1911.

In the three years Miss Hobbs has been with Governor West her ability and courage have been put to some severe tests. When, a year ago, the Governor launched a State-wide antivice crusade, it became necessary to open an office in Portland, where the fight finally centered. He sent Miss Hobbs to take charge of it and act as his official representative. We read on:

As the fight waxed warm the Governor himself spent much time there. Scores of men and women from the submerged world and representatives of the saloon interests sought him on various pretexts, and it was Miss Hobbs's duty to be present at every interview, as the Governor refused to see any of them alone. When the Governor was at the capital Miss Hobbs directed the campaign of law enforcement.

Several months ago, when the State legislature was in session, there was bitter strife between the Governor and the organization leaders in the Assembly. As the end of the session drew near, there was much speculation as to what measures the Governor would veto. The leaders decided to adjourn the legislature for five days, then return and pass the vetoed bills over the executive's head. It happened that Saturday of the last week of the regular session was a holiday. The Governor locked up his office Friday evening and dropt from sight; so did his employees. Saturday morning, when the legislature wanted to deliver some bills to the executive, a frantic and futile search for the Governor was begun.

The next Monday morning Miss Hobbs was the only person to appear at the executive offices. The legislators stormed the place. Demands were made for the Governor's return, then for information as to his whereabouts. But the law-makers might as well have besieged a sphinx.

Alone, except that she was in constant communication by wire with the Governor, Miss Hobbs weathered the legislative storm, which reached its crest when both houses of the Assembly passed a resolution authorizing a forcible entry into the Governor's offices with the accumulated bills, and which resolution was literally carried into effect by the President of the Senate.

Miss Hobbs is a student of details; she keeps her mind on her work, and Governor West says he has never yet put a job up to her which she has not been capable of handling.

"Some of my girl friends have asked me what I am going to do with all my salary," she said recently. "I'm not going to spend it on clothes and a good time; it's going to pay the mortgage. When that is out of the way then I will be free to do just as I please."

She was in favor of woman-suffrage during the campaign which brought success to that progressive measure, but played no prominent part. However, she lent aid to the cause and helped to bring success. She has stanch friends among the leading women of the State, who recognize

I Make a Cigar to Suit YOUR Taste

If you are a "Havana" smoker, I can make just the cigar that will suit your particular taste—at about half what you now pay—and to prove it, I'll send you a hundred on free trial, without deposit. All I need to know is the brand you are now smoking and the price.

If after smoking a dozen or so you do not find mine a hundred per cent better than the cigar you now smoke, send the remainder back—the trial will not have cost you a penny.

My entire business—the largest of its kind in the world—has been built upon my ability to give a BETTER cigar than any one else can for HALF the money. This is because I sell direct to private smokers at factory prices.

If you've never smoked a clear handmade "Havana" only a few days old—a cigar with all the rich flavor of the original oil of the leaf intact—a cigar so fresh and moist that you can bend it almost double—you have a real treat in store for you, as I'm willing to prove entirely at my expense.

Write me today on your business letter-head (or enclose business card), giving name, price and color of the cigar you're smoking and I'll ship you postpaid on free trial, a hundred "Roberts" cigars that will JUST suit your particular taste. Write today. Send no money. Simply address

in her a satisfactory affirmative answer to the question if woman is fit for important political positions.

There is nothing masculine about Miss Hobbs. Knowledge of the ways of the world, politics, and business has only lent charm to one of Oregon's most interesting personages.

Some see in her a possibility for the Governor's chair, when the time for a woman's guiding hand in the executive office arrives.

HUNTING THE PORPOISE

NOWADAYS the playful porpoise, little known to landlubbers except as a gamboling, glistening creature that amuses itself by leaping from one wave to another, is hunted as systematically as the whale used to be. For a long time the blubber of the porpoise has been valuable for the oil it contains, but only of late has its body been known to contain a lubricant of unusually fine quality. It seems that fishermen have discovered that the lower jaw of the porpoise yields an oil that is peculiarly fitted to serve as a lubricant for watches, clocks, and chronometers, and from no other source can an oil of the requisite qualities be obtained. The industry is carried on by a special class of fishermen along the Atlantic coast of this country, who are busy during the cooler months, because it is then the porpoise puts on its winter underwear in the form of a thick protective layer of fat, which makes the work more profitable than in summer. The New York *Sun* tells the story:

A few years ago nearly a quarter of a million clocks just out of their makers' hands went wrong. It was not merely that they lost time, but they actually came to a full stop and would not work at all. There was no question about their skilful fabrication and assembling. The whole trouble was due to an imperfect lubricant, and a goodly sum of money and much time were spent before those clocks were in running order and fit for distribution. From this may be appreciated the value of the contribution which the porpoise makes to the daily life of mankind.

For years the porpoise was taken principally as a side issue in other fishing. The increase in the demand for the oil led to the creation of a business having for its sole end the capture of porpoises in large numbers and under circumstances that could be controlled to meet commercial demands.

Harpooning had previously been the method of taking them, but this had many drawbacks. An oil refiner in New Bedford learned that the Turks on the Black Sea used drag-nets to land the native porpoise when swimming near shore in quest of certain small fish upon which they feed. This was a practise unknown here, and conditions were not identical, but that clever Yankee believed that the facilities could be adapted to suit the requirements. From New Jersey to Florida are now

BUFFALO LITHIA SPRINGS WATER

The Great Solvent and Eliminator of Uric Acid and other Poisons

DR. STUART MCGUIRE, Richmond, Va., Surgeon in charge of St. Luke's Home, Professor of Principles of Surgery and of Clinical Surgery, University College of Medicine, Richmond, Va., etc.: "In cases of headache from lithæmia, of headache from passive congestion of the kidneys, of strangury from concentrated urine and a host of other ills, I always advise Buffalo Lithia Water."

GEORGE BEN JOHNSTON, M.D., LL.D., Richmond, Va., Ex-President Southern Surgical and Gynecological Association, Ex-President Virginia Medical Society and Professor of Gynecology and Abdominal Surgery, Medical College of Virginia: "If I were asked what mineral water has the widest range of usefulness, I would unhesitatingly answer Buffalo Lithia. In Uric Acid Diathesis, Gout, Rheumatism, Lithæmia and the like, its beneficial effects are prompt and lasting. * * * Almost any case of Pyelitis and Cystitis will be alleviated by it and many cured. I have had evidence of the undoubted Disintegrating, Solvent and Eliminating powers of this water in Renal Calculus, and have known its long-continued use to permanently break up the gravel-forming habit."

The late HUNTER MCGUIRE, M. D., LL.D., Ex-President American Medical Association and of Medical Society of Virginia, Late President and Professor of Clinical Surgery, University College of Medicine, Richmond, Va., etc., said of Buffalo Lithia Water: "I know from constant use of it personally and in practice that the results obtained from its use are far beyond those which would be warranted by the analysis given. I am of the opinion that it either contains some wonderful remedial agent as yet undiscovered by medical science or its elements are so delicately combined in Nature's laboratory that they defy the utmost skill of the chemist to solve the secret of their power."

Buffalo Lithia Water is sold by all druggists and everywhere mineral waters are sold.

BUFFALO LITHIA SPRINGS WATER CO. BUFFALO LITHIA SPRINGS, VIRGINIA

Moonstones Imported Direct

These stones show the bluish opalescence that identifies the genuine. Wonderful milky sheen and lustre; strikingly beautiful. *Bought in British India* by a member of our firm. You can buy from us for *half the price* you'd pay jewelers.

Buy Moonstones Loose: have these stones set by your jeweler in platinum, gold or silver. After mounting they cost you about a *third less* and look *twice as handsome* as the jeweler's commonplace stock.

Beautiful Christmas Gifts lovely birthday remembrances; individual, the correct stones for men's evening wear—stud-sets and cuff links; very fashionable for rings, lavallieres, collar and cuff pins, scarf pins, etc.

Assortment on Approval if you send reference. See them. Make your selection and return remainder. Address

scattered fishing stations organized by that refiner of the old whaling city, and from November to April they are busy seining porpoises as they pass up and down the Atlantic shore-line. Porpoises can be caught at other seasons, but in winter they are fattest and furnish the best and most profitable yield.

To the uninitiated the fat of the body and the fat of the lower jaw appear much of a kind, but the oils produced from them are radically different in their characteristics. The oil from the body fat is worth in the raw state about 40 cents a gallon, while a like quantity of the yield of the jaw pans and the marrow of the jaw-bone brings $10. The blubber, or body fat, of a large porpoise furnishes from five to six gallons of oil, and the lower jaws of a fish of the same size give probably about two quarts on an average, and this quantity is greatly reduced before the various stages of refining have made the oil fit for the market. When ready for sale to watch- and clock-makers the oil is worth nearly double its value in the raw or unrefined condition.

The equipment at each fishing station consists principally of the boats and the special nets designed for the work. A working unit is composed of four boats and a mile of seine. The seines are heavy and exceptionally stout, and it is something of a task to handle them properly. The boats are a cross between a skiff and the fishing dory of Newfoundland and our own down-East coast.

It is not possible to put out after the porpoises from sheltered points; the boats have to be launched right into the surf and carried safely beyond the danger-line of the tumbling breakers. Loaded with its quarter of a mile of net, it is a hard task to shove one of these boats through the broken water near the beach. The most fruitful porpoise-hunting station is close to Cape Hatteras, and it is well known what hazards lurk in the waters of that part of the coast of the Carolinas.

Because of the risks run and the skill required in this occupation the crews are recruited from local fishermen who are perfectly familiar with the coast and are quite at home in the surf. They must have clear heads, steady nerves, and the ability to act quickly. The surfmen are ever ready for their work when a school of porpoises draws near, provided the sea gives them half a chance, and it takes but little imagination to grasp something of the excitement and the peril of their occupation.

The habit of the porpoise is to swim in schools within a mile or so of the shore, very close to the beach when feeding. When they are near the beach it is possible for fishermen to intercept their course and drag them ashore after they have stranded in shallow water. Tho simple to describe, catching them is a difficult job. *The Sun* goes on:

Sometimes the sea is so smooth that the fish detect the presence of their foe soon enough to go scurrying off at great speed. Again, the waters may be so troublous that prompt handling of the nets and the interception of the approach-

THREE-SASH FRAME

Create Artificial Summer

for your garden this winter. This miniature glass garden with its double glazed sash affords the means of growing your favorite flowers and vegetables right through the coldest months.

Violets grow profusely in these cosey beds. Pansies and mignonette also flourish abundantly. Lettuce, radishes, beets, Swiss Chard, small white onions, etc., yield profitable winter crops.

Start Spring seedlings of vegetables and flowers early and have large healthy plants weeks before your neighbors who must wait for moderate weather to plant in the open.

Lutton Sash Frames made in 2, 3 and 4 sash sizes, each sash 3x6 ft., single or doubled glazed. Any size shows a profit on the first crop and will give years of service. Carefully crated and shipped ready for immediate use. Frames sold with or without sash.

Make use of these frames this season. Write today for descriptive pamphlet D.

At all Bookstores; or post-paid by publishers on receipt of mail price—the Five, Carriage Paid, for $6.50.
FUNK & WAGNALLS CO., Dept. 913, NEW YORK

ing school become impossible. Perhaps one or more of the boats may be swamped before getting clear of the breakers, making further successful efforts at the time out of the question, or the porpoises may be swimming too far off shore to be reached with a fair chance of drawing them to shallow water before they can get away.

There are many times when the efforts of the fishermen are fruitless, and days may pass without a single porpoise putting in an appearance. Sometimes a haul will net less than a dozen; perhaps the surfmen may land half a hundred; and there have been occasions when more than double this number have been reached at a single try. As several thousand must be caught during the season to supply the annual consumption of oil for this country, it is easy to understand why there are stations for this work located along the Atlantic seaboard from New Jersey to Florida.

Porpoises vary from six to twelve feet in length, and the biggest of them weigh fully a quarter of a ton. Their speed in frightened flight and their beautiful leaps above the water's surface tell of their great strength; and one can easily picture the task involved in drawing the heavy seines with the added burden of a goodly number of these excited mammals making their utmost efforts to break their way to freedom.

The porpoise is the largest denizen of the deep caught by seines within the waters of the United States, and for excitement the nearest approach is the taking of the tunny in the waters of Europe. As soon as the porpoises are stranded in shallow water, the fishermen rush in among them, taking good care to avoid the slashing sweep of their powerful tails, and hook them so that they may be dragged high and dry upon the beach. Strange as it may seem, the fish are not infrequently drowned or suffocated before they can be pulled ashore. This is because they can not breathe properly when resting on their sides or their bellies.

No time is lost after these graceful creatures of the sea have been landed in stripping them of their fat. The head is severed from the body, and the precious tissue of the lower jaw and cheeks is tried out separately from the body blubber. The reason for this is that the two oils are quite unlike as lubricants, and haste is needful in order to prevent the fatty tissue from becoming rancid before rendering. Rancid fat seriously affects the final product, and seemingly trifling conditions bear importantly upon the ultimate suitability of the lubricant.

At the fishing stations the oil produced is essentially raw or crude by comparison with the finished article and contains a good deal of foreign substance which must be removed before the stuff is fit for the market.

As soon as the oil is received by the refiner it is heated gently in order to complete the cooking process begun by the fishermen at the seining stations. Up to this point man has done his work, and now time and Nature take up the task. The oil is allowed to rest for eight months and is exposed during that time to the clarifying effects of the sun and also to the influences

A BLIND LEADER OF THE BLIND

THE old adage about the blind leading the blind has been proved wrong in one case, at any rate. When William I. Scandlin became blind six years ago it was generally taken for granted that his career was ended. But that was because his acquaintances did not know how resourceful a man he was. Mr. Scandlin has proved that one may be completely blind and yet, figuratively speaking, see more clearly than most of us who have eyes. He has made the darkness bright for himself and bright for many others. The key to his success is the idea that we others are handicapped in our work for the blind because we must work "from the outside in," whereas he has the advantage of helping "from the inside out." Kathleen Norris tells about him in *The American Magazine:*

Mr. Scandlin was in early middle life twelve years ago—a prosperous business man, a prominent member of various clubs, and the father of a growing family—when his sentence fell upon him. He had nearly six years in which to grow reconciled to blindness and to helplessness and dependence, as he thought. All the schemes in his busy brain, all the activities of his full days must be resigned, one by one. No more casual glancing at the clock, at the newspaper headlines, at the faces of friends, no more of the spring greenness, the busy noontime streets, the theater, the club. Life was over for William Scandlin, or at least the best of life.

Perhaps he quailed before the years, but those who know him even a little know that it was not for long. When he was sure that blindness must be, he gave up his work and his offices and devoted his failing sight to the learning of what might fill the years to come. He bought a typewriter and worked seriously at short stories. He studied enunciation and address, with lecturing in mind. All the while the light was steadily going, and whatever he did was made incredibly difficult and tedious by the ever increasing handicap of his failing sight. Mrs. Scandlin, who is as extraordinary a figure as her husband, put her eyes and brain and hands, her courage and trust, tirelessly at his disposal. Together they began the new life, and they began it hopefully, as they had years before begun a different new life together.

Mr. Scandlin wrote an extraordinary number of short articles and stories and sold nearly all of them, not at very large prices perhaps, but with enough return to encourage him very much. He stopt writing only when his lecturing became too absorbing; the lectures were an instant success. It was through these that he first came to know Miss Winifred Holt—the wonderful woman whose whole heroic life is devoted to the cause of the sightless—and the great institution she has built, of climatic heat and cold. Then it is strained or filtered through suitable fabrics further to cleanse it.

"THE EMERALITE" BED LAMP

CAN BE ATTACHED TO ANY BED

Like all "Emeralite" lamps (with the emerald green glass shade and white glass lining) this lamp affords the maximum of reading comfort. It can be attached by felt-lined clamp and detachable key to any brass bed post, vertical or horizontal, round or square, from ¾ in. to 2½ in. diameter. Will not mar bed's finish. Also made with felted vice-jaw clamp to fit wooden bedsteads. The light is soft and restful and can be placed just where you want it.

This is the ideal fixture for hotels, hospitals or home. No unsightly screws, no protruding corners. Neat, efficient, practical, convenient. Can be used with electric Tungsten or Carbon lamp. Sold by dealers everywhere. Write for OUR BOOKLET telling all about this BED LAMP and the other 30 handsome styles.

Just the Thing for Holiday Giving

FUNK & WAGNALLS COMPANY
354-360 Fourth Avenue New York, N. Y.

the Lighthouse for the Blind, in East Fifty-ninth Street, New York City.

Before the new Lighthouse was built, last year, Miss Holt and Mr. Scandlin were in daily consultation, and perhaps it was this combined knowledge, from the outside in and from the inside out, that has made it what it is, truly a shining tower whose light reaches to the city's darkest places. Surely that person was blind who designed the hallways with their rounded openings, the stairways with chain-guards at top and bottom, and a balustrade running up the center, and the great porchlike cement and iron fire-escapes that stand out twenty feet from the building.

When we went to the Lighthouse we were told that Mr. Scandlin was at a board meeting, but in a few moments he joined us, an erect, rosy, splendidly vigorous man who made his way as confidently as we did through the halls. He piloted us everywhere, touching electric buttons for lights or for the elevator, pointing out every beauty of detail, introducing us to the blind girls at their looms, and the blind men busy with basketry.

In the hour or two that we spent at the Lighthouse, he was constantly interrupted. Mr. Scandlin was needed to straighten out a matter of house business, was wanted to meet visitors, was wanted at the telephone, was wanted in his own office to meet and advise the heartsick young father of a family whose eyesight had recently been lost through a factory accident. He is president of the Blind Men's Club, he superintends the census office, he makes endless calls upon the city's blind in their own homes, and travels all over the State in their interest, sometimes being entirely alone, on trips of several weeks' duration. He arranges for the monthly concert that is given for the blind in the King's County Poorhouse, a concert, by the way, that is enjoyed by several hundred of the State's charges who are not blind. He is constantly planning and experimenting, and when he talks of the great work that has already been done and the greater changes that the near future will bring for the blind his face fairly radiates content, and you find it hard to realize that only a few years ago he had to meet one of the heaviest blows that ever falls to the lot of man.

Some weeks ago, in the Lighthouse, Mr. Scandlin explained the method of writing and typewriting, and exhibited the establishment to a lady who was heartsick over her son's impending blindness, and quite unaware that her guide could not see.

"Ah, but Mr. Scandlin!" she wailed, when she was going, "you find this work very inspiring and delightful, but you are not afflicted! You can see!"

One may imagine the twinkle in his eyes as they met hers.

"That is very true, madam," he answered gravely; "as you say, I really know nothing of the affliction of blindness!"

Sartorial Wonder.—" Son."

" Well, dad? "

" Did you pick out that suit of clothes of your own accord or is it a part of the hazing you have to go through with ? "—*Louisville Courier-Journal.*

Come and Make Money in the Salt River Valley, Arizona

Here Uncle Sam has built the great Roosevelt Dam and is watering a farm for you. It is durable, fertile, easily worked soil, rich enough to enrich you. Twenty acres is enough, and rightly handled will put money in the bank rapidly.

Alfalfa pays surely and easily. It ripens quickly, cuts five or six crops a year, and sells for good prices. All conditions are favorable to it, and there's a demand right at home.

When you get to producing fruit, then you will be making the big money. The fruit here is of high quality, and you can put it onto the market early when prices are highest. Salt River Valley cantaloupes and strawberries reach the market in early March and bring $400 to $800 an acre. Oranges, peaches and olives take longer to come into bearing, but the results are worth the waiting, especially when you have these other crops to market meanwhile.

Sugar beets are money getters. They produce a heavy tonnage here, with high sugar content, and the premiums paid increase the profit.

Chicken raising and dairying pay well, and you will understand why when you see the prices Arizona miners pay for butter, eggs and poultry.

The Roosevelt Dam not only gives you water for irrigation—making crops certain—but the development of the electric power furnishes your light and power, and ultimately is expected to pay the entire cost of maintenance.

This is a valley of homes, with schools and churches. Land with water rights cost about $100 an acre, but you will agree such land is worth it.

If you want to know more about the "Salt River Valley" write for our new Arizona folder. I'll be glad to answer specific questions, also tell you about the Homeseekers Excursions, the first and third Tuesday of each month.

THE SPICE OF LIFE

Good Control.—"That man has a wonderfully well-trained memory."

"Yes. He can make it remember anything he chooses."—*Washington Star.*

A Side-step.—BIX—"Can you lend me $5 for a month, old boy?"

DIX—"What the deuce does a month-old boy want with five dollars?"—*Boston Transcript.*

Good Riddance.—"So Miss Biffers is married at last?"

"Yes."

"And who is the happy man?"

"Her dear old dad."—*Birmingham Age-Herald.*

The Other Way.—"So the Youngweds have separated. I suppose it was because he couldn't support her in the style to which she was accustomed."

"Say, rather because she couldn't accustom herself to the style in which he could support her."—*Boston Transcript.*

Diplomatic Move.—"What makes you so anxious to send Three-finger Sam to the legislature? He isn't so very popular."

"No. We citizens of Crimson Gulch figured that it would be a great savin' to the general community to get a poker-player like Sam located somewhere else."—*Washington Star.*

The Answer.—Father, teaching his six-year-old son arithmetic by giving a problem to his wife, begs his son to listen:

FATHER—"Mother, if you had a dollar and I gave you five more, what would you have?"

MOTHER (replying absently)—"Hysterics."—*Brooklyn Life.*

Hardly Begun.—"Your society started out to decide a number of questions of great scientific importance."

"Yes. We arranged to consider the manifestation of the psychic impulse in protoplasmic life and the molecular energy developed by the prismatic transmutation of light-waves and kindred topics."

"And have you done so?"

"No. We've only been in session a week. We haven't yet decided the question of who's boss."—*Washington Star.*

Three Requests.—A *P. M. G.* reader sends us the following little story—certainly one of the best of its kind:

To the great god Buddha came the representatives of the Catholic, Protestant, and Jewish religions, to pay him homage. Buddha, very flattered, told each of them that if they would express a wish, it would be fulfilled.

"What do you wish?" he asked the Catholic.

The answer was "Glory."

"You shall have it," said Buddha, and turning to the Protestant, "What do you wish?"

"Money."

"You shall have it."

"And you?" This to the Jew.

"I do not want much," quoth he; "give me the Protestant's address!"—*Pall Mall Gazette.*

Overlooked.—A bridegroom is a person who spends a lot of money buying himself a wedding-suit that nobody notices.—*Dallas News.*

Easy Way.—KNICKER—"The Administration wants to starve Huerta out."

BOCKER—"Then it should bring him to New York and make him buy eggs."—*New York Sun.*

Both Behaving.—MRS. WOMBAT—"Mah husban' ain't been arrested in twenty-five years."

MRS. COOPLEY—"Mine's up fo' life, too."—*Puck.*

Dickering.—"Ordered your winter coal yet, old man?"

"Ordered it? I'm not in a position to order it. But I'm making overtures for it."—*Boston Transcript.*

Weepy.—"How was the matinée, Felice?"

"I have never before enjoyed a play so much. Just look at this handkerchief! It's soaked with tears."—*Birmingham Age-Herald.*

Getting It Straight.—"After all," said Kwoter, "it's a true saying that 'he laughs best who laughs last.'"

"Not at all," replied Wise. "The really true saying is: 'He laughs best whose laugh lasts.'"—*Catholic Standard and Times.*

False Alarm.—"What's this?" asked the dictator, nervously, as the courier handed him a document.

"An ultimatum."

"Another ultimatum? Then it's all right. I thought maybe they were trying to start something."—*Washington Star.*

Going.—During revival meetings in a Western city placards giving notices of the various meetings, subjects, etc., were posted in conspicuous places. One day the following was displayed:

Subject—"Hell: Its Location and Its Absolute Certainty."

Thomas Jones, barytone, will sing "Tell Mother I'll Be There."—*Ladies' Home Journal.*

Learning Fast.—When little Willie's mother opened the door to the vicar her face beamed with joy and welcome, in spite of the fact that it was washing-day.

"This is a real pleasure, sir," she began. "I've been waiting to thank you for the good you've done our Willie by your evening classes. Home's as different again since he attended the plumbing and gas-fitting class!"

"This is, indeed, gratifying—very!" said the vicar. "Now, what improvement have you noticed especially in little Willie of late?"

"Well, he's arranged our penny-in-the-slot gas meter so that we get our gas for nothing. You see, he's moved it from the scullery to outside the front door, sir."

"But you still have to put your pennies in the slot, my good woman!"

"Ah, but you see, sir, before he put the meter in the road our Willie wrote 'Chocolates' over the slot!"—*London Answers.*

How I Made $20,000 in One Year in My Back Yard

After thirty years' experience in raising blooded dogs, I have written a book that tells the secret of my success. It shows how anyone with a little patience and small capital, but with much love and kindness, can make a comfortable living and have joy in abundance right in one's back yard.

My book tells you my system of scientific breeding; how to properly feed, rear and care for them; contains a chapter on canine ailments and their proper treatment; explains how to house break, teach tricks and gives modern methods of training hunting dogs. Contains standards and descriptions of twenty-five breeds with illustrations of typical specimens of each breed. Highly bred dogs are in greater demand than ever before, over one million dollars being paid annually to the working classes of the British Isles for dogs, which could as well be bred in this country. My dogs have won over 600 ribbons, and by following my system as given in this book, you can do as well. The breeding and raising of large litters of healthy specimens of winning form being assured. If you have but one dog, you cannot afford to be without my book. Price of book is $1.00 delivered. After you read it and are not satisfied, I will return your dollar.

CURRENT EVENTS

Foreign

November 21.—Prince Keiki Tokugawa, the last of the shoguns, who for ten months was the "uncrowned ruler" of Japan, dies in Tokyo.

November 23.—A final estimate gives the wheat crop in Russia as 873,751,000 bushels, which exceeds last year's crop by more than 200,000,000 bushels.

November 24.—The British Government asks the Admiralty, War Office, and Board of Trade for reports on the question of the construction of a tunnel under the English Channel.

November 25.—German women present a petition to Parliament asking for suffrage in the Empire.

General Villa's army at Juarez defeats a force of Mexican federals who attempt to retake the city.

November 26.—The British superdreadnought *Warspite*, which is to cost $14,000,000 and will be the most formidable battle-ship afloat, is launched at Devonport, England.

Domestic

WASHINGTON

November 20.—The National Conservation Congress adjourns after adopting resolutions, as amended by Gifford Pinchot, denouncing water-power monopolies and declaring for public ownership.

November 21.—The Department of Justice decides to make a thorough investigation of the cold-storage situation throughout the country, with a view to ascertaining if there had been a combination in restraint of trade resulting in the increased cost of living.

John H. Marble, member of the Interstate Commerce Commission, dies.

November 25.—Miss Jessie Woodrow Wilson, daughter of the President and Mrs. Wilson, is married to Francis Bowes Sayre.

Democratic Senators in conference agree to have no Christmas recess unless the Currency Bill is passed by December 24.

GENERAL

November 20.—It is reported that textile operatives in New England will receive a general wage increase of 12½ per cent., effective December 1.

November 22.—The antislavery bill which was passed recently by the Philippine Assembly is ratified by the Philippine Commission and is now a law.

Fourteen deaths and 175 serious injuries are the figures given for the football season.

November 24.—Thirteen public utilities have been purchased by Wisconsin towns, under a new law which empowers municipalities to take over such plants at will, the aggregate valuation of those bought being $2,400,000.

A mysterious aeroplane fall kills two army lieutenants at San Diego, making a total of 15 in the Federal air service who have met death.

E. M. Holland, one of the best-known American actors, dies at Cleveland.

November 25.—Governor Cole L. Blease, of South Carolina, frees 100 convicts in order that they may eat Thanksgiving dinner at their homes. One is pardoned and the 99 paroled during good behavior.

Fourteen thousand employees of the General Electric Company, of Schenectady, N. Y., go on a strike.

W. W. Finley, president of the Southern Railway, dies suddenly in Washington, following a stroke of apoplexy.

An Undesirable.—The new baby had proved itself the possessor of extraordinary lung powers. One day baby's brother, little Johnny, said to his mother:

"Ma, little brother came from heaven, didn't he?"

"Yes, dear," answered the mother.

Johnny was silent for a minute, and then he went on:

"I say, ma,"

"What is it, Johnny?"

"I don't blame the angels for slinging him out, do you?"—*Tit-Bits.*

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

In connection with the LEXICOGRAPHER'S answer to "F. P. A.," of Detroit, Mich., in the issue of THE LITERARY DIGEST, dated October 11, a correspondent points out that the form "Jacques" does not occur in "As You Like It," but that there the form is "Jaques." He adds that "the pronunciation of 'Jaques' is not, as you imply, 'Jay'kweez.' In Shakespeare's own pronunciation it was probably 'Jakes,' and according to the traditional stage usage 'Ja'kwes' or 'Jaq'wes.'" Reverting to the pronunciation of this name (Jaques), that commonly heard on the stage is jay'kweez; the Shakespearian pronunciation has been rendered jak'wez (*a* as in *at* and *e* as in *pen*). The pronunciation "jakes" is that with which the LEXICOGRAPHER is himself most familiar.

"R. Q. K.," Springfield, Ohio.—"What is the meaning of the word *sabotage* which we see so frequently in the papers?"

The NEW STANDARD DICTIONARY defines the word as follows:

sabotage, n. [F.] 1. The act of cutting shoes or sockets for rails in railroad-ties. 2. By extension, the act of tying up a railroad by malicious damage. 3. Hence, any poor work or other damage done by dissatisfied workmen; also, the act of producing it; plant-wrecking.

It is derived from the French word *sabot*, a wooden shoe, and is pronounced sa-bo-tazh' (both *a*'s as in *arm*; *o* as in *obey*).

"M. R.," Bellevue, Pa.—"Who were Agnes Surriage and Harry Frankland'?"

Sir Harry Frankland, or more fully Sir Charles Henry Frankland, was some time consul-general in Portugal. His story forms the groundwork of Dr. Oliver Wendell Holmes's ballad of "Agnes," which is told more correctly by Elias Nason in his "Sir C. H. Frankland, or Boston in the Colonial Times," published in 1865.

Sir Charles Henry Frankland, who was collector of the Port of Boston, was born in Bengal, India, May 10, 1716. He died at Bath, in England, January 11, 1768. On the death of his father in 1738 he was offered the governorship of Massachusetts and the collectorship of the Port of Boston. He accepted the latter office, and in 1741 he went to Boston accompanied by Sir William Shirley, who was given the former.

While on a visit to Marblehead for the purpose of erecting fortifications, Frankland became interested in a young girl of sixteen who was scrubbing the floor of a tavern where he stayed. This was Agnes Surriage, who was possest of great beauty and wit. Frankland obtained the permission of her parents to have her educated. In 1752 he retired to his estate at Hopkinton, Mass., which he had bought in 1751 and lived there in great luxury with Agnes Surriage. In 1754 he returned to England on account of the contesting of the will of an uncle, through which he had become beneficiary, and he took Agnes Surriage with him. But his relatives treated her with disdain and Frankland left England on a continental tour. While in Lisbon, Portugal, he was buried under the ruins of the house of Francesco de Ribeiro during the earthquake that occurred there November 1, 1755. Agnes Surriage rescued him and shortly afterward he married her. He returned to England with his wife, who as Lady Frankland was most cordially received by his relatives, and in 1756 they both went to Boston, where Lady Frankland was welcomed in the best society of that city. Subsequently (1757) Frankland resigned and became consul-general in Portugal, but in 1763 visited Boston and spent some time at Hopkinton. Later he returned to England and went to Bath, where he died. In 1887 Edwin L. Bynner published a novel entitled "Agnes Surriage," of which Lady Frankland was the heroine.

This CHRISTMAS ~ Make it ELECTRICAL and Have it PRACTICAL

Coffee Percolator
$12.50

It is ever the desire to find something new to give expression to the spirit of Christmas. With the growing trend toward sane and practical giving, the range of choice that is offered in electrical devices for home comfort and home convenience appeals strongly to one who would select for a gift that which is attractive both for its novelty and practicability.

Velie

Now Comes the Velie One-Ton Truck, as Superior in Light Delivery and Short Haul Service as the Velie Three-Ton Truck is in Heavy Duty

A larger motor than any other one-ton truck—greater power—greater ability—greater economy because less strain. Investigate these important facts.

Big concerns that have steadily adhered to horse-drawn service for light loads are now displacing their equipment and buying Velie One-Ton Trucks.

And their first big reason is, because they know the Velie Company is sound, that it is backed up by practically unlimited financial and manufacturing resources. Only such a Company is in a position to give the kind of service that Truck owners must have if they are to be satisfied.

Velie service centers in the large distributing points assure prompt and satisfactory treatment in every case where service is required. Buyers of Velie Trucks know that this service will continue.

The second big reason is, because the Velie One-Ton Truck has more features contributing to proper service than any other Truck of the same capacity built.

A Company of the standing of the Velie Company must build a good Truck—for the reputation of the Velie Company depends on the high standard of service of every Truck that we send out.

Electric starting and electric lighting are regular equipment. And here is a big feature contributing to satisfactory service. The driver does not waste time starting the motor after the Truck has been standing still; he does not waste gasoline and oil by allowing the motor to idle when he is making delivery of packages.

Pneumatic tires as regular equipment, with solid tires optional, contribute to the long life and economical service of the Truck and make quick delivery possible without rapid depreciation.

The big motor—giving ample power at relatively low speed—assures maximum service and reliability.

Comparison of the specifications of the Velie One-Ton Truck with those of any other one-ton truck built, is a convincing argument.

So is careful study of the service which has been obtained by the owners of Velie Trucks.

We have been building the One-Ton Truck as long as we have been building our heavy capacity Trucks, but only now, after we have been satisfied that it is the best Truck of its type that can be had, are we ready to accept orders that we have been holding off before.

A motor truck built to stand the rigid requirements of Velie Truck inspection can be used almost anywhere, but many Trucks that can be used almost anywhere have fallen down in work that is being accomplished successfully every day by Velie Trucks.

VELIE MOTOR VEHICLE COMPANY

50 VELIE PLACE, MOLINE, ILLINOIS

22 People Died in This Wreck

—an awful toll—and more terrible because it was preventable.

Alfred Henry Lewis strikes to the rotten core of the stock-watering and high finance that has brought ruin to our country's railroads and death to hundreds of people. "Own the railroads or the railroads will own you" is his warning.

Tense, pointed, prepared after long study by skilled investigators, his indictment embodies some of the most comprehensive ideas yet advanced on the railroad situation. All patriotic Americans, men or women, owe it to themselves to read what Mr. Lewis says in the articles now running in

"Your Money and Your Life"

A Welcome Christmas Gift Your Boy Needs—Only $1.00

This fine illustrated monthly magazine is not a little child's publication—nor is it a sensational outlet for cheap "thrillers." It never prints a word, thought or picture which tends to lure boys away from home or give them mental poison. **A magazine you can trust—that will never break faith.**

Read by 500,000 typical, aggressive boys. Put your boy in this happy class. Subscribe now as a Christmas present to him.

Twelve months of healthful brain-food —$1.00. 10c a copy at newsdealers'.

If you make request, when sending a subscription, we will mail a Christmas Gift Card to the boy, notifying him of his coming year's pleasure and profit.

THE SPRAGUE PUBLISHING COMPANY
219 American Bldg., Detroit, Mich.

"Home-Making, the New Profession"

Is a 100-pp. ill. handbook—it's FREE. Home-study *Domestic Science* courses. For home-making, teaching and well-paid positions. **Am. School of Home Economics, 525 W. 69th St., Chicago, Ill.**

The Lawyers Co-op. Pub. Co., Rochester, N. Y.

"No man of business...can afford to be without it!"

NATIONAL CITY BANK
Wall St., New York. The largest bank in America

—Vice-President of the National City Bank, New York.

With such authority behind it, this frank statement ought to make all business men think. Isn't it short-sighted not to equip *yourself* and *your employes* with this most wonderful of all instruments of human knowledge—the *new* Encyclopaedia Britannica?

Any day down at the National City Bank

in Wall Street you will find the new Encyclopaedia Britannica in use in a working business library that is the product of the highest grade of business acumen.

The Standard Oil interests have never been behindhand in seizing upon aids to success. The men conducting this great institution appreciate the value of expert knowledge; knowledge that is available at any time it is wanted, and on any possible sort of occasion. They are men quick to recognize the latest and best means for improving efficiency. They make money work, whether they put it into an encyclopaedia or a share of stock. And they know that system counts, in making information accessible no less than in the handling of checks.

A large manufacturer of flavoring extracts found that information the book gave him about materials used in his business was alone worth more than its price.

A big company engaged in the manufacture of steel and brass products had the article on Iron and Steel reproduced for special use in connection with its business.

An expert on commerce, writing of the industrial articles, says: "This work ought to find a place on the shelves of every manager of big works in the English-speaking world."

A few representative firms out of many thousand subscribers in the world of finance, business, manufacturing, etc.

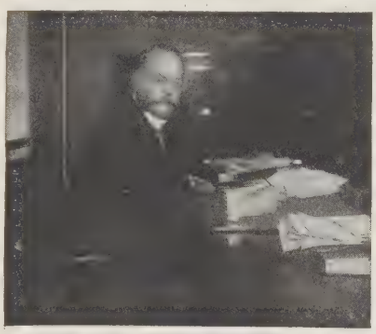
The New Encyclopaedia Britannica

11th Edition, 29 Vols. (Published by The Cambridge University Press)

is the most highly perfected instrument for making *knowledge available for use.* It is the only complete systematized inventory of all the knowledge that has practical value, and is the product of the organized cooperation of acknowledged leaders of the world's thought in every department of human activity.

Fifteen hundred practical experts and specialists from 21 countries worked together on a systematic plan to produce this entirely new work, and the unprecedented sum of $1,500,000 was spent to make it.



HON. WILLIAM C. REDFIELD

OFFICE LIBRARY OF THE CURTIS PUBLISHING COMPANY, PHILADELPHIA, PA.
With the Britannica on second shelf from top

Whether you are manager or clerk, banker, merchant, manufacturer or salesman, steel man or grocer, this work has a claim upon you. It renders a service unparalleled in this day of specialization.

"The best library for the business man. Progressive firms should see to it that it is not only in their offices, but in the homes of those on whom their business success depends," says a specialist on business system.

Photo, Topical Press
THE BANK OF ENGLAND
Threadneedle St., London, where the Britannica is used

Full sets, in 7 different bindings, both on India and ordinary paper, together with bookcases, on display in the *Exhibition Rooms, 6th floor, 120 West 32d St.* Open every week day, including Saturday, from 9 to 6.
Telephone 8530 Madison Sq.

Last Opportunity on Monthly Payments

THE CLOSING OF THE SUBSCRIPTION LIST opened by the *Cambridge University Press* for the sale of the New Encyclopaedia Britannica at specially low prices and by monthly payments of only $5 marks a radical change in the method of purchase, and the successful conclusion of a bold enterprise.

The price was exceptional because it was 40 *per cent less* per volume than the price at which previous new editions of this work had been issued.

The purpose of this early sale at a low price and for small monthly payments was to bring a great educational work, **upon the preparation of which over $1,500,000 had been expended,** within reach of the largest circle of readers, and to make its usefulness widely and rapidly known. These two objects have now been achieved, more than 50,000 sets having been distributed.

IN ENGLAND, THE OFFER AT THE PRESENT PRICES WILL BE TERMINATED ON DECEMBER 20TH, AND IN THIS COUNTRY, SHORTLY THEREAFTER.

HOW TO MANAGE the System and Get the Most Out of Life

Despite A Weak HEART

The Passions and Pains of 5000 Years in These 4 Volumes

Just to get you started as a Review of Reviews subscriber, we make you this offer. Not only do you get this famous History of the World absolutely free—but you pay for the Review of Reviews in little monthly payments. From the books you know the past, from the magazine you know the present. Send no money;—just the coupon for the whole set on approval. And do it today—offers like this wait on no man.

Duruy's History of the World FREE

Complete—Authoritative—Good for Reading—Good for Reference

In four splendid volumes, well bound in cloth, and full of portraits, sketches, maps and diagrams, with a full index and with one volume on history of the last 50 years by Prof. Grosvenor of Amherst.

So up-to-date that it includes Amundsen's Discovery of the South Pole, with maps, etc. . . . So far back that it begins with the first man. Over 2,000,000 copies of DURUY have been sold in France alone.

This master of the pen shows you the glory that was Greece's and the grandeur that was Rome's.

He guides you through the Middle Ages, the picturesque old days of feudalism and of the crusades; through the Renaissance, with its revolution in art, science and letters, up to contemporaneous history which Prof. Grosvenor completes in brilliant manner.

In the story of the past, lie the secrets of today. When you know the motives of men in the past, their desires and their ambitions, then you can understand the history that is being made around you today—and you will understand that better when you get the Review of Reviews for a year.

REVIEW OF REVIEWS FOR A YEAR

Send no Money Send the coupon only. It brings the whole set—4 good volumes—charges prepaid—absolutely free. All we ask is that—after you get the books and like them—you send 25 cents for shipping and $1.00 a month for 3 months to pay for the Review of Reviews.

If the books alone aren't worth more than you pay for both books and magazine together, send them back at our expense. But be prompt. The world-wide fame of DURUY will make these 5,000 sets disappear at once. Send your coupon today—and be in time.

WHY The American Standard Bible

(Edited by the American Revision Committee)

Is Best for the Sunday School

The exact thought of the sacred writers is given in readily understandable language in this version, thereby making its sacred teachings not only clearer to the young folks, but infinitely more interesting—every reading makes more Bible students.

The American Standard Version is used by the International Lesson Committee in the preparation of the Uniform and Graded Lessons, and by the leading Bible Scholars of the United States.

Even the English scholars say it is the best—Read what *The London Quarterly Review* says: "It is a noble work, destined to become the accepted Bible of the majority of the Anglo-Saxon race; and we are tempted to wish that it might be adopted as the one final revision of the English-speaking world."

Because of the great demand the publishers have issued it in over 200 different styles to meet every need. Prices from 35 cents to $50.00.

THE SOUL

By J. W. Corey, M.D. 40 years' Study and Research. THERE IS NOTHING LIKE IT IN THE WORLD. The Soul is no longer a mystery. Its organ has been discovered and can be developed with mathematical exactness. Scientific, interesting and attractive. Transforms Man into Superman. It is the first scientific Text-book on the Soul ever published. Do you know anything about the Soul? If not, you can know if you desire to know. It is happiness, peace and joy to those who do know. The Soul is as superior to the Mind as the Sun is to the Moon. The Soul soars, the Mind grovels. Doctors, Lawyers, Preachers, Teachers, Psychologists, Sociologists and general readers should have a copy for reference. It solves life's problems. The Soul keeps us young. Good paper; Clear type; 12 chapters; Silk cloth binding; Gold letters. Booksellers and Librarians say it is first class. The Soul should be well clothed. Can be consulted with profit every day. $1.00 Postpaid. Prospectus 2 cents. **Order Now.** Money back if not as described.

Success at 35

In reply to your kind favor of the 25th, I am glad to say that the jobbing business I started four years ago is now firmly established and is showing excellent profits. At the beginning even my best friends said I did not have enough experience to make a go of managing a business of my own. As a matter of fact, I didn't. If I had not in the nick of time taken up your Modern Business Course and Service, I should certainly have followed methods of financing and selling that would have proved ruinous.

While I am just conceited enough to believe that eventually in some way or other I should have made good anyway, I feel that the credit is due almost wholly to you that I have been able to establish myself as a business success at 35, instead of at 50.

From a subscriber of the

Alexander Hamilton Institute

There are tens of thousands of men in business who have it in them to make their business careers successful—eventually.

But the road that many of them follow leads through long years of blind stumbling. Gradually they learn business principles through their own losses and mistakes. The best part of their lives is gone before they "arrive."

The man who wrote the letter above has found a shorter road to his goal. He has supplemented his own experience with the experience and the thought of other men. And so today at 35 years of age he stands at a point that he would not otherwise have reached before he was 50. He has added 15 years to his business life.

The credit is due—he says—to the Modern Business Course and Service of the Alexander Hamilton Institute. More than fifteen thousand men are ready to give similar testimony to the immense, practical value in their business affairs of the work of the Alexander Hamilton Institute.

Some of these men are business generals; others are still trudging in the ranks. Some are advertising men; some are accountants; some are shop executives. Whatever their positions, they are all picked men. The Alexander Hamilton Institute appeals only to men who are looking ahead and moving up.

Alexander Hamilton Institute

21 Astor Place **New York City**

If you feel that 15 years are worth adding to your business life—if your career is not yet closed—if you are still on the up-grade—then send for the wonderful story of the development of the Alexander Hamilton Institute during the last four years, which is told in our 80-page book called "Forging Ahead in Business." The book is written especially for you—for every live, 44-calibre man. It will lay before you *facts* that you ought to know. It will open up new possibilities for greater business achievement. You may have a copy for the asking. Attach coupon to your letterhead.

A Classical Education *at home*

No dry-bone digging in bulky old tomes—*No* tiresome struggles to translate the dead languages for yourself—
But a Wealth of Inspiring Ideas applicable to your daily life—a *Digest* of the Vital Knowledge of Past Ages, practically helpful in your intercourse with men and women, in your *conversation, reading* and *writing.*

"Foreign Classics *in English*"

By William Cleaver Wilkinson, Professor of Poetry and Criticism, University of Chicago

What It Means to You

Are you on speaking terms with the great masterpieces of foreign literature—
—the books that have *lasted through the centuries*
—whose contents are as pregnant with *living truths* today as when originally uttered, altho the *medium*—language—(of some) be dead?

The whole world recalls the utterances of the Greek and Roman orators, called forth on great historical occasions; while the pithy truths expressed by their philosophers are part and parcel of our daily thought and speech.

The Greek and Latin *classics* might well be called the "*first principles*" of our present day thought and knowledge.

French and German literature as well holds a vast treasury of rich idea-germs for you—

if you can read them.

Are—

"Herodotus, Thucydides, Plato, Aeschylus, Sophocles, Aristophanes, Sappho, Demosthenes" (Greek)—"Livy, Tacitus, Lucretius, Plautus, Horace, Cicero, Pliny" (Latin)—"Froissart Rabelais, Montaigne, Moliere, Voltaire, Rousseau, Diderot, Lamartine, Balzac" (French)—"Luther, Klopstock, Lessing, Novalis, Goethe, Schiller, Heine" (German)—

only empty names to you? *Then*

A True Intellectual Feast

awaits your reading of these wonder-minds of foreign literature when they are made to talk in *your own* every-day, common-tongue, *living* English.

That is *just what Dr. Wilkinson has done* in preparing the "Foreign Classics *in English.*" But he is *not* a mere translator—he has selected the most precious jewels from the great mass of writings that have come down through the ages and interwoven them with a bright running comment of his own, which *explains* them for the everyday reader. This work is *limited to six convenient library books*, each 8x5½x1 in.

1838 pages of pithy, compendious paragraphs —100 hours of delightful mind culture. Say two evenings of reading a week: Then you will make this complete *digest* of great foreign literature a part of *yourself*—your own personal, pride-worthy possession, in 6 short months, while the *pleasure*—even forgetting the *profit*—of acquirement will come in a constant stream.

Also Useful to the College Alumnus or Student

Many people recall with feeling *far from joyous*, college days (and nights) spent wrestling with difficult foreign language constructions—their *personal* reading (?) of the classics.

Most of the *beauties* of a foreign literature are lost in the scuffle when we, *Americans*, laboring in a labyrinth of alien words and sentence structures, try to read the *author's meaning* out of the original text.

"Classic" Defined

"A *classic* is properly a book which can be simple without being vulgar, elevated without being distant, and which is something neither ancient nor modern, *always new and incapable of growing old.*"—LOWELL, "*Among my Books.*"

Prof. Wilkinson's masterful selection of the *really important* in Greek, Latin, French and German literature, which he reproduces *entirely in English*, along with his own rapid-fire comment and elucidations, explanatory maps and pictures, is regarded as:

"Scholarly,"—*Outlook.*
"Always Interesting,"—*Nation.*
"Inspirational,"—*Literary World.*

These Six Inspiring Books

are printed on superior book paper and tastefully and substantially bound in cloth. They are regularly sold at $1.50 a volume or $9 for the set. See F. & W. catalog.

$3-Holiday-Coupon Good Only For 30 Days

The corner coupon below has the same value as 3 crisp $1 bills if filled in and mailed to us *at once*, the $3 credit to be applied on one set of Wilkinson's "Foreign Classics in English," in the handsome ornamental cloth binding as just described, at our *printed* net catalog price, $9. The $3 will be taken right off your bill the same as so much cash. *No reduction without coupon.* Carriage prepaid to your city.

10 Days' Free Examination

on *your own reading table*—You request them for *free examination* without feeling any sense of obligation to purchase unless you are more than pleased with the books. We feel you can not help but have a pride and joy of ownership in this beautiful edition of Wilkinson's "Foreign Classics *in English.*" That is the reason we want you to *see* the books and *then* judge whether you want to keep them. Remember, this coupon has only temporary value.

Use Coupon before you mislay it.

VALUE $3.00—HOLIDAY COUPON
(Not good after January 13, 1914)
FUNK & WAGNALLS CO., 354 Fourth Ave., N. Y.

Please send me, *carriage prepaid*, one set Wilkinson's "Foreign Classics *in English*" for ten days' *free examination*—6 12mo volumes bound in substantial cloth. Do You Believe That ?

"Our Whole System of Society is Rotten From Top to Bottom and the Social Environment is the Worst That the World has Ever Seen"?

So says our greatest living scientist—co-discoverer with Charles Darwin of the theory of evolution—

in his new book

Social Environment and Moral Progress

By DR. ALFRED RUSSEL WALLACE

Author of "Darwinism," "Man's Place in the Universe," Etc.

"One of the most fruitful and suggestive of recent works. It is a study on the one hand of the moral character and intellectual capacity of man, and upon the other of modern society as affecting man's moral and intellectual progress...A remarkably stimulating examination of the life of mankind."—*The Springfield Republican* (Mass.).

"He recalls to our minds, with stinging, uncontrovertible logic, all the social, political, and economic wrongs and injustices from which we suffer today. After treating of morality in general, and of character as a permanent attribute of humanity, he devotes a chapter to environment during the nineteenth century, tracing the gradual urbanization of life in civilized countries, the drift from country to crowded city, and all the ills of 'hectic industrialism'."—*Review of Reviews.*

"His book is bound to be an epoch making one, a towering landmark in a vast expanse of literature upon this burning subject."—*Record of Christian Work.*

"The author's position as co-discoverer with Darwin of one of the most momentous theories in the history of thought, his venerable age, his wide scientific knowledge, and deep philosophic insight, lend to his utterances an authority such as could be claimed by *no other living writer*....It comes with an authority too high to be impugned; it conveys a message of too grave import to be ignored. Not to read and earnestly ponder such a message is little short of a sin against the future."—*The Dial.*

A UNIQUE PLAN FOR CHRISTMAS GIVING

It Will Make Your Christmas Dollars Give Pleasure and Profit Among Your Friends and Kindred—It will Promote Efficiency Among Your Employees to Your Decided Saving. "Worth as Much to Every Man as a Tuition at Columbia or Harvard," says one Literary Digest Patron after trying the "Plan" Extensively and Repeatedly.

You Get Special Price

Our Plan has delighted all who have tested it.

Under it, among Your Friends and Employees, you can practise economy while giving real values.

High class literature is always prized by the recipient.

Our Method is dignified, simple and satisfying.

The Printed Page is the best form of Holiday Remembrance.

© F. & W. Co.

We Cooperate With You

Under this Plan, among your Employees, you can promote efficiency while pleasing them.

Mental improvement adds to the value of service.

We Benefit the Giver and the Receiver.

You will not go amiss in embracing this plan for your selected helpers.

We Guarantee You and Satisfy Your Friend

Our Proposition to Cooperate with you is legitimately in your interest. The friends you prize most will be delighted if you accept it, and will thank you many times. Your employees will be helped by it and made glad.

We Serve Your Convenience and Save Your Cash

You have the right to return what you buy of us if not satisfactory.

We furnish you full particulars upon receipt of request for these.

Make As Many Presents As You May Wish

Remember that under this proposition we add largely to the purchasing power of your money.

Your business will receive direct benefit from your adoption of our plan.

Your friend is informed that what we send has been ordered by you. We send notice of this fact.

Every Present Will Improve Its Recipient

Remember that you incur no obligation by asking for full details, which will be furnished promptly as per Coupon.

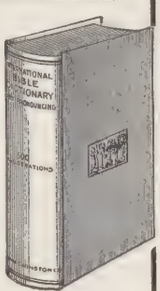
INTERNATIONAL BIBLE DICTIONARY

Edited by F. N. PELOUBET, D. D.
Author of "Select Notes on the International Lessons"



Based on profound scholarship, it explains in the simplest language, **every Biblical subject,** every place, nation, person, custom, instrument, implement, animal, plant, flower, etc.

SELF-PRONOUNCING—
An invaluable feature, owing to the many difficult Bible names.

MOST COMPLETE—
The "International" contains 5,419 separate articles—1,007 more than the next largest one-volume work, and 1,761 more than the third largest.

AGENTS MAKE LARGE PROFITS—

BEST ILLUSTRATED—The "International" contains 508 illustrations and NEW maps (the other Dictionaries mentioned have 3 and 454 respectively). Many of these have never been printed before.

BEST BOUND—The "International" is bound in **Special Library Buckram,** made to meet the requirements of the U. S. Government for a material more durable than cloth or leather. Withstands atmospheric changes; resists vermin; will not mold or decay. (The other Bible Dictionaries mentioned are bound in ordinary cloth.)

SPECIAL OFFER **The International Bible Dictionary will be SENT FREE for examination, ALL CHARGES PREPAID. If it does not please you, return it at our expense. If it pleases you, remit special price.**

OUR SPECIAL PRICE IS ONLY $2.40. (The other works mentioned above sell at $5 and $6 respectively.)

Choosing a School for the Winter Term

Do you know that many of the best private schools will be open to receive your children after the Christmas holidays?

Schools which had a full roster in September frequently have a few vacancies at this time, due to change in parents' plans, illness, and other causes.

If you were unable, for similar reasons, to place your son or daughter in a school at the Fall opening, take advantage of this opportunity. Place them in the right school after the holidays. Many schools devote special attention to students who enter at this time, helping them to rapidly make up the three months which they have lost. Principals also arrange special prices for the rest of the year.

In these columns appear the announcements of the leading schools and we would suggest that you write at once to those which seem to meet your requirements.

If you do not see the one you are seeking among the schools advertised here, we will be glad to advise you promptly and fully. This service is impartial and is offered without charge.

Simply tell us the kind of school desired, location, and approximate tuition, addressing your letter to

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 354–360 Fourth Ave., New York

VOL. XLVII., No. 24 NEW YORK, DECEMBER 13, 1913 WHOLE NUMBER 1234

TOPICS OF THE DAY

HOW THE PRESIDENT'S MESSAGE IS RECEIVED

THE "CENTRAL SUBJECT" of the deliberations of the present session of Congress, declares the President in his message, will be legislation "to prevent private monopoly more effectually than it has yet been prevented." Nevertheless he reserves his specific antimonopoly recommendations for a special message at a later date, realizing, the Washington correspondents suggest, that to turn the glare of the spot-light on this many-sided subject at the present moment would distract the attention of Congress and the country from the Currency Bill, which now holds the center of the stage. So, in the absence of an explicit antitrust program, the passages which arouse most discussion in the press are those relating to Mexico and to presidential primaries. The message as a whole, the correspondents tell us, was received by the joint session of the two Houses with a cordiality and enthusiasm that lend support to the rumors of an "era of good feeling" among the political factions in Washington. From the leaders on both sides come tributes to the broad statesmanship of the President's address.

But while the Democratic leaders in House and Senate are willing to cooperate on the legislative program laid before them, "already it is evident," remarks the Washington correspondent of the New York *Times* (Ind. Dem.), "that the great annual appropriation bills will delay for many weeks most of the constructive legislation Congress is called upon to enact." This also is the prospect as it appears to Mark Sullivan, Congressional expert of *Collier's Weekly* (Prog.), who, despite rumors that the Senate will pass a currency measure by December 20, predicts that serious debate on the Currency Bill will probably not begin until after Christmas, and the bill, in all likelihood, will not become a law until March." "This will mean," adds Mr. Sullivan, "that Congress will have been in session without interruption for one year, from April until April, and will have passed only two important measures"—the Tariff Bill and the Currency Bill. "The time of the two Houses has been deliberately wasted in the belief that the exclusion of other measures from discussion would hasten action on these two Administration measures, but it has not done so," remarks the Philadelphia *Press* (Rep.), which declares that "each branch was without business the greater part of the time, waiting for the other or the committees to act on the measures the President was pushing." Returning to Mr. Sullivan's account of this "impossible situation," we are reminded that the special session occupied eight months (beginning April 7), and are assured that during this period "nineteen-twentieths of the time of the 435 members of the Lower House was spent in inefficiency and idleness." This dissatisfaction, however, is apparently not shared by the President, who concludes his message with a reference to his own pleasure in "cooperating with this Congress and sharing with it the labors of common service to which it has devoted itself so unreservedly during the past seven months of uncomplaining concentration upon the business of legislation."

Editorial efforts to characterize the message as a whole are generally complimentary and even eulogistic, dwelling especially upon its briefness, its clarity, and its broad grasp of the subjects discust. "It heartens, it animates, it stimulates—it soothes," declares the New York *Herald* (Ind.), which rejoices that the dominant note is one of confidence. "It is neither a call to arms, an apology, nor a challenge," remarks the Newark *News* (Ind.), but "just that sort of a statement which the head of a great business might issue to his associates in the enterprise regarding the coming year's program and policies." But "it's lacking in definiteness," complains the Albany *Knickerbocker Press* (Ind.), and the New York *Journal of Commerce* speaks of the President's "calm, conciliatory, and rather non-committal" survey of the nation's affairs, and observes that "the message is so suave and smooth and cheerful that one finds it hard to complain of its lack of real analysis or discussion of anything." "For the reason that he does not commit himself to detail, he leaves little chance for dispute," thinks the Philadelphia *Telegraph* (Rep.), which nevertheless finds the message "reassuring."

"There is but one cloud upon our horizon," reports the President, "and that hangs over Mexico." He then proceeds to discuss the Mexican situation in a few outspoken paragraphs in which some papers, like the New York *World* (Dem.), discover a "new American doctrine," while others, like the Philadelphia *Inquirer* (Rep.), can find "just no policy at all." Declaring that "there can be no certain prospect of peace in America until General Huerta has surrendered his usurped authority in Mexico; until it is understood, on all hands, indeed, that such pretended governments will not be countenanced or dealt with by the Government of the United States," the President goes on to say:

"We are the friends of constitutional government in America; we are more than its friends, we are its champions; because

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 354–360 Fourth Avenue, New York, and Salisbury Square, London. E. C.

Entered at the New York Post-office as Second-class Matter.

in no other way can our neighbors, to whom we would wish in every way to make proof of our friendship, work out their own development in peace and liberty. Mexico has no government. The attempt to maintain one at the City of Mexico has broken down, and a mere military despotism has been set up which has hardly more than the semblance of national authority. . . . . .

"Even if the usurper had succeeded in his purposes, in despite of the Constitution of the Republic and the rights of its people, he would have set up nothing but a precarious and hateful power, which could have lasted but a little while, and whose eventual downfall would have left the country in a more deplorable condition than ever. But he has not succeeded. He has forfeited the respect and the moral support even of those who were at one time willing to see him succeed. Little by little he has been completely isolated. By a little every day his power and prestige are crumbling, and the collapse is not far away. We shall not, I believe, be obliged to alter our policy of watchful waiting. And then, when the end comes, we shall hope to see constitutional order restored in distrest Mexico by the concert and energy of such of her leaders as prefer the liberty of their people to their own ambitions."

It is in his declaration that "such pretended governments will not be countenanced or dealt with by the United States,"

THE MEXICAN CACTUS.

—Bradley in the Chicago *News*.

which constitutes itself not only the friend but the champion of "constitutional government in America," that the New York *World* discovers the "new American doctrine." We read:

"Exactly ninety years to a day after James Monroe in a message to Congress defined the Monroe Doctrine, Woodrow Wilson in an address to Congress defined the Wilson Doctrine.

"The former was designed to protect the Latin-American republics from European colonization. The latter is designed to save these republics from recurrent anarchy. . . . . .

"As the Monroe Doctrine was aimed at the Holy Alliance, so the Wilson Doctrine is aimed at the professional revolutionists, the corrupting concessionaires, and the corrupt dictators of all Latin America. If language means anything, it means that so far as this Administration is concerned the United States will not recognize the constitutional authority of Latin-American governments established by usurpation without the free consent of the unintimidated inhabitants thereof. . . . . .

"If the United States is to guarantee the integrity of Latin-American countries, they must in turn maintain a kind of government that will not forever threaten peaceful relations between the United States and the rest of the civilized world. If we are to protect their territory, it is right that we should demand that they protect their own institutions."

Championing constitutional government in America, remarks the Springfield *Republican* (Ind.), "is in line with the doctrines of the fathers, and in the long run will prove to be the principle to tie to." Also "it explains the basis upon which President Wilson is proceeding as to Mexico and the other neighbor countries."

While many papers agree with the Syracuse *Post-Standard* (Rep.) that the President's confidence in his policy of "watchful waiting" is "probably justified," others, like the New York *Evening Sun* (Ind.), see in it only a "dangerous optimism." In the Philadelphia *Inquirer* we read:

"The policy of 'watchful waiting' is no policy at all. If President Wilson was set upon overthrowing Huerta he ought to have been prepared to put some one in his place who would have accepted the Wilsonian principles. But it is now entirely apparent that the President had no definite policy whatever. His interference has brought about a carnival of blood and thunder, with no assurance of anything better in sight. For should Huerta be driven out by Villa or by some other rebel chieftain, in what respect would Mexico be better off? President Wilson does not know. He merely 'hopes' that all will come out right; 'hopes' to see constitutional order restored 'by the concert and energy of such leaders as prefer the liberty of their people to their own ambitions.' . . . . . .

"'Watchful waiting' coupled with a 'hope' for the best—that is the Wilson policy, which is just no policy at all. And all the world holds its sides and laughs."

"Who are the leaders to whom the President looks for the restitution of constitutional order in Mexico?" asks the New York *Evening Mail* (Ind.), which continues:

"Are they to be found among the Carranzas, Villas, Zapatas, or any of the bandit chiefs whose men have been killing prisoners, violating women, and looting and burning cities, towns, and villages in the name of the 'constitution'? . . . . . .

"No one familiar with the Mexico of to-day can discover among the fierce and unscrupulous soldiers and spoilers who will command the country when Huerta's Government is crusht any sign of the leaders who 'prefer the liberty of their people to their own ambitions.'

"What is to take the place of the Huerta Government whose collapse the President says 'is not far away'?"

"Is it possible to have a President of Mexico freely and fairly elected?" asks the New York *Press* (Prog.), which answers that those who know Mexico and the Mexicans believe that it is not. So "after this Huerta, what shall President Wilson do about the next Huerta?" The same misgiving finds expression in the New York *Tribune* (Rep.) and *Journal of Commerce* (Com.).

Huerta replies to the President's frank words with a declaration that "I have no intention of yielding," and "should this fighting in Mexico continue for years, I shall continue to do my part in it if I am still alive." He also asserts, according to Mexico City dispatches, that Mexico is self-supporting, and that forced loans, if made necessary, would enable him to resist indefinitely. *El Pais*, which is described as the most independent of the Mexico City newspapers, remarks that "President Wilson's words are so injurious and depressing, and at the same time the charges he makes against the Mexican President are so unjust, that it is preferable to pass them by in silence in order not to awaken anti-American sentiment in Mexico."

On the day following the reading of the Message, the House passed the Hay Bill "to provide for raising the volunteer forces of the United States in time of actual or threatened war." Commenting on this measure, Mr. Mann, minority leader, declared that it presaged war with Mexico. He said in part:

"I remember very well when the first proposition was presented to this House in reference to the war with Spain. Mr. Cannon, my colleague from Illinois, then chairman of the Committee on Appropriations, presented one day in the House a bill to appropriate $50,000,000 and place it in the hands of the President of the United States. I was one of the new members of the House. I received one minute of time. I took that one minute to say that at least there was one man in the House who was not attempting to deceive himself, while all the others had said that this was not in expectation of war, but to prevent war. I know that it was because we were expecting war.

Photograph by Underwood and Underwood, New York.

NOT WILLING TO FIGHT FOR THE FUN OF IT.

These Mexican soldiers have stacked their arms in a street in Mexico City, refusing to fight for the Huerta Government until they are paid and fed. President Huerta's lack of funds to keep his army contented may account in part for the recent Constitutionalist successes.

"I fear that the same situation arises now. . . . . .

"I do not see any escape from chaos and anarchy in Mexico under the plan we are now pursuing. If this situation runs on very long, it means war."

Turning from the Mexican question, the press find a topic of second interest, and, incidentally, a complete surprize, in Mr. Wilson's advocacy of a change in the method of choosing Presidential candidates. "I urge," says the President, "the prompt enactment of legislation which will provide for primary elections throughout the country at which the voters of the several parties may choose their nominees for the Presidency without the intervention of nominating conventions." And he goes on to say:

"I venture the suggestion that this legislation should provide for the retention of party conventions, but only for the purpose of declaring and accepting the verdict of the primaries and formulating the platforms of the parties; and I suggest that these conventions should consist, not of delegates chosen for this single purpose, but of the nominees for Congress, the nominees for vacant seats in the Senate of the United States, the Senators whose terms have not yet closed, the national committees, and the candidates for the Presidency themselves, in order that platforms may be framed by those responsible to the people for carrying them into effect."

The President's hope that this suggestion "can be handled promptly and without serious controversy of any kind" seems to find more encouragement in the comments of political leaders than in the editorial columns of the press. Thus while dispatches record the approval of Speaker Clark, Oscar Underwood, and Democratic, Republican, and Progressive Senators and Representatives too numerous to name, we find, in the Eastern press at least, many expressions of doubt as to whether the proposed reform is either constitutional, practical, or desirable. "I am glad the President has gone to Kansas to get the primary idea and a plan for a party council to make the platform," remarks Representative Victor Murdock (Prog.), and other Bull Moose leaders point out that the President has here appropriated a Progressive policy. Inquiries sent by the New York *Sun* (Ind.) to the national committeemen of the Democratic, Republican, and Progressive parties elicited 53 answers, 46 of which were favorable to the change, 3 against it, and 4 non-committal.

Representative Mann, minority leader of the House, admits that the Presidential primary is coming, but thinks that another Constitutional amendment will be necessary first. A nation-wide primary, objects Senator Gallinger, the Republican leader in the Senate, would "give the rich man an advantage over the poor man," and "make bribery easier than at present." Southern Democrats, according to a Washington dispatch in the New

READY FOR THE END AT THE NATIONAL PALACE.

If President Huerta is in the Capital when the rebels get there—if they do—he will depend on these machine-guns, belonging to the Federal Artillery Battery, to repel any assault upon his official residence.

York *World*, regard the President's suggestion with suspicion as a menace to States' rights; and in the New York *Herald* we read:

"A Federal primary law is a certain precursor of a Federal election law. And with the Federal election law what will become of the now winked-at disfranchisement of negro voters in the Southern States?"

Some are moved by Mr. Wilson's suggestion to say that if his primary plan had been in force in 1912 he would not now be President. "Nothing more radical or far-reaching or extra-constitutional," remarks the New York *Sun*, was ever proposed by Theodore Roosevelt. Among other papers which look doubtfully upon the idea are the New York *Tribune* (Rep.), *Telegraph* (Dem.), *Times* (Ind. Dem.), and *World* (Dem.), the Brooklyn *Standard Union* (Rep.), and the Baltimore *News* (Prog.). *The News*—

"does not believe the country is ready either for surrender of the States' right to regulate or provide for primaries as they will, or for restriction of the parties' right to mold their conventions according to their own ideas of propriety."

Other matters recommended to Congress in the message are the ratification of the several treaties of arbitration awaiting renewal by the Senate; the passage of the Currency Bill; the institution of rural credits; the enactment of legislation to reduce the "debatable ground" about the Sherman Antitrust Law; a conservation policy that will "use the resources of the country, not lock them up"; Government railroads and a territorial form of government for Alaska; increased scope and equipment for the Bureau of Mines; a "fair and effective" employers' liability act for the benefit of railway employees; and "alleviation of the very unsafe, unjust, and burdensome conditions which now surround the employment of sailors." Of our obligations toward "our territories oversea" the President says:

"No doubt we shall successfully enough bind Porto Rico and the Hawaiian Islands to ourselves by ties of justice and interest and affection, but the performance of our duty toward the Philippines is a more difficult and debatable matter. We can satisfy the obligations of generous justice toward the people of Porto Rico by giving them the ample and familiar rights, and privileges accorded our own citizens in our own territories and our obligations toward the people of Hawaii by perfecting the provisions for self-government already granted them; but in the Philippines we must go further. We must hold steadily in view their ultimate independence, and we must move toward the time of that independence as steadily as the way can be cleared and the foundations thoughtfully and permanently laid."

A BARGAIN-COUNTER BOOK VICTORY

AT FIRST GLANCE it might seem that everybody concerned in the making, selling, and buying of books would be happy to learn of the Supreme Court's final decision that publishers may not lawfully combine to stop the sale of their books at "cut rates." The "consumer" will get his books cheaper and can afford to buy more of them; the retailer will be perfectly free to buy his books at regular wholesale prices from any jobber or publisher, and to sell them at any price which suits his fancy; the publisher will thus sell more books and the author will get bigger royalties. But the publishers point out an error in this line of reasoning. They assert that the department stores will be the only winners—the book-buyer will only be helped in buying "best sellers" and the department-store class of literature; the retailer who can not meet department-store competition in those lines, and who can not exist on his sales of works of higher grade, must put up his shutters; the publishers will find no retail outlet for their more serious, slow-selling works, which the book-lover will find it difficult to obtain. So representatives of the publishers insist that they have been fighting the small retailer's battle, and indirectly the consumer's. But the owners of the New York department store who originally brought the suit have no misgivings. They call the decision "a complete victory" in the "fight against the Book Trust." It "brings to a climax a suit at law which has been fought from court to court for the past eleven years, during all of which time Macy's has sold books at less than the trust-fixt prices." And it means that "the 'Book Trust' hereafter can not dictate the retail price of any of its products." As the New York *Journal of Commerce* tells the history of the suit in its news columns:

"R. H. Macy & Co. sold several books copyrighted by publishers belonging to the said combination at prices below the price fixt. The Book Trust thereupon published Macy's name in the trade as having cut the prices of copyrighted books and forced its members, as well as all wholesale and retail dealers, to refuse to sell them any books of any kind. Macy & Co., however, feeling that one of their business policies was at stake, continued to sell books at whatever price they saw fit, in spite of the attempts of the trust to force them to sell at a higher price as required by the rules and regulations of the combination."

Finally, suits were brought in both State and Federal courts, and the final settlement of the one brought by Macy & Co. means, we are told,

"That the combination of the book publishers has been

illegal not only as to uncopyrighted books, as previously held by the New York Court of Appeals, but also as to copyrighted books.

"The decision means a victory for R. H. Macy & Co. all along the line and establishes for the benefit of the reading public the absolute right of retailers, in the absence of a contract to the contrary, to sell copyrighted books at any price they choose."

Turning to the publishers' side of the case, we find the statement made by the president of their association that "there never was any attempt to fix prices by the association," and that "there was never a 'Book Trust.'" Mr. George Haven Putnam, of G. P. Putnam's Sons, makes a like assertion. He then goes on to explain that the efforts to keep up retail prices on copyrighted books have been made, first in behalf of the regular booksellers throughout the country, and ultimately to enable the book-buyer to get the books he wants, and to get them wherever he may live. To quote Mr. Putnam's remarks as given in the New York *Evening Post:*

"The general purpose of the association was, as said, to prevent the booksellers throughout the country from being driven out of business by the competition of dry-goods concerns which utilized books as advertisements, and for this purpose were prepared to sell them at cost or below cost.

"The American who is interested in literature, and who may have the impression that he is going to have the advantage of some cents a volume on his future purchases, will find that the result of this application to the book trade of the restrictions of the Sherman Act will be to undermine the business of the bookseller and to lessen the opportunities (so important in the United States, where thousands of cultivated readers are at a great distance from the publishing centers) of examining on the counters of a well-appointed bookshop the current literature of the day and the standard literature of past years. . . . . .

"The immediate result of the use of books as inducement and misleading advertising is in lessening the number of booksellers throughout the country, to restrict the facilities for selling and the opportunities of the public for buying. It is therefore the dry-goods concern whose operations have now been legalized under the Sherman Act which works in restriction of trade, and in the development of a 'monopoly' of bookselling even if the books sold are restricted to certain popular classes.

"What the dry-goods dealer has in mind is not the distribution of good literature at a lower price than that at which it will be sold by the regular bookseller, but the bringing into a 'state of mind' a customer (and particularly a feminine customer) who, finding that there is a reduction easily calculated on a popular book, convinces herself that the enterprising dry-goods dealers are selling all their 'fripperies' at a similar reduction."

The public should understand, concludes the New York publisher, "that not only authors, publishers, and booksellers, but book-buyers throughout the country have a direct interest in the maintaining of book-distributing machinery."

Another reminder of like tenor comes from the New York *Journal of Commerce*, which observes editorially:

"The fact still remains that there is a certain lack of justice to publishers and to authors of copyrighted books in virtually destroying their special market by the freedom of any dry-goods, hardware, or grocery dealer, to get the books and to sell them cheaply as a mere incident of their own proper business."

GLASS

WILL THE CEREMONY PASS OFF WITHOUT A HITCH?

—Bradley in the Chicago *News.*

DEPOSIT GUARANTY IN THE CURRENCY BILL

MR. BRYAN'S former advocacy of bank-deposit guaranties may be held responsible by some for the appearance of a guaranty plan in the Currency Bill. Yet the action of the Democratic Senators in caucus seems to have been immediately suggested rather by Republicans and anti-Administration Democrats than by the Secretary of State. The name of Senator Hitchcock (Dem.) is associated with the minority report from the Banking and Currency Committee, but with him were such Republicans as Senators Bristow, Crawford, and McLean. One "improvement" they decided to put in the Glass Bill was a provision for a "depositors' insurance fund." This, remarks the New York *Sun* (Ind.), "seems to have caught the fancy of the Democratic caucus, and something of the sort"—to *The Sun's* disgust—"is promised for the bill which the Senate will be asked to pass." According to the summary of the caucus plan in *The Sun's* Washington correspondence, one-third of the "surplus profits from the reserve association above the cost of conducting the banks and the payment of dividends, and after a surplus of 20 per cent. has been accumulated," shall be "devoted to a guaranty fund to reimburse depositors in the reserve banks against loss. The amendment divides the surplus profits in three equal parts, one part to go to this guaranty fund for depositors, another to refund the 2 per cent. bonds now used as a basis of circulation of national bank-notes, and the third to be turned back to the bankers in the reserve association as extra profits." This, says the Philadelphia *Record* (Ind. Dem.), a zealous supporter of the Administration, "is not a very objectionable proposal, nor a very important one."

"It is a small thing compared with the guaranteeing of deposits that has been proposed at various times and tried in a State or two. . . . The guaranteeing of bank deposits by all the banks acting mutually puts a premium on bad banking and imposes a penalty on good banking.

"That objection does not apply to this plan for using a small part of the profits of the regional reserve banks to insure their deposits. The deposits will be made by the member banks, which will be represented on the directories of the regional banks. . . . It is really a mutual insurance scheme by banks in a position to regulate the risks incurred by the regional bank."

But *The Sun* will have none of it. This may be deposit guaranty "in its least noxious guise"—but "banking judgment will regard it as only a beginning." And we read further:

"Opinion will probably be that once the new banking system is headed in that direction, no prediction can safely be made about a stopping place. The best banks will not be anxious to get caught in the toils of such a movement. Yet these are the banks which above all the new banking system should comprize for the successful operation of the financial machinery. It will be a poor system made up chiefly of banks from which the conspicuously fit institutions are eliminated.

"All experience indicates that the best guaranty of bank deposits is a good banking system and good banking under intelligent and alert government supervision."

To another conservative editor the projection of the guaranty

of bank deposits into the currency situation seems "likely to be more diverting than the 'red herring' Mr. Vanderlip is alleged to have drawn across the trail some time ago." And the St. Louis *Globe Democrat's* (Rep.) final judgment is that

"The currency measure contains already enough experiments without adding this financial heresy to the mixture. The Administration is said to be unfavorable to it. If offered in good faith, it would be promptly and energetically rejected, regardless of party lines. If designed to embarrass the Administration, it deserves the same treatment."

A "SCHOOL OF COUNTRY LIFE"

A SCHOOL established solely for the purpose of preparing people for such a prosperous, active, interesting, and comfortable life in the country that the city will lose its lure, is something to delight the heart of our Secretary of Agriculture. For he is convinced, he writes to the founders of the Knapp School of Country Life, at the George Peabody College for Teachers, in Nashville, "that the biggest problem confronting us is the rural-life problem, and yet it is one which in its larger aspects has been ignored." The new school, founded in memory of a man who did much for Southern people living in the country, represents, according to the Mobile *Register*, "the first attempt in America to build an institution devoted exclusively to the study of the problems of rural life." What will differentiate this school from the ordinary agricultural college, explain its founders, will be its attempt to solve the big social and economic problems of country life, to show the farmer the possibilities of a career and a happy life without going to the city. The Southern press extend an enthusiastic welcome to the Knapp School, believing, as one editor puts it, that it is certain to perform a "wonderful service" for the South, where 85 per cent. of the people live in the rural districts. For, as the Mobile paper points out,

"The school will teach farmers and their sons the principles of better farming, better business methods on the farm, and better living in the country, and thus promote the agricultural interests of the South.

"The school will maintain courses on the college campus and make demonstrations on the Knapp farm. The Knapp farm will be established as an object of interest and imitation for the entire South, a model of its kind. The school will offer cooperation to help convert part of the grounds of country schools in all sections of the South into similar models for their respective communities. It will also help to convert the farms of its friends into such models.

"Everything that makes advance toward a larger and more accurate knowledge of the cultivation of the soil, especially in the South, is very welcome to all persons who are interested in Southern agricultural development. The Knapp school and farm promise to be of material aid, and to make farming not simply more profitable but more cheerful for those who are engaged in it."

It is most fitting, declares the Memphis *Commercial Appeal*, that this school should be the memorial to the life and work of the late Seaman A. Knapp. For,

"There has not been a name to which the farmers, their sons, and their daughters in the South are so much indebted as that of this good man, who died a little over a year ago. In organizing the cooperative demonstration work, in promoting the boys' corn clubs and canning clubs among the girls on the farm, Dr. Knapp did three things which firmly fix his name in the history of the great industrial awakening now going on in the South."

The memorial building for the use of the Knapp School, we learn from a pamphlet sent out by the memorial committee, is to be located on the Peabody College campus.

"The farm will be located within ten or twelve miles of Nashville, and will be conducted in accordance with the demonstration methods. It will contain about two hundred acres. Pure-bred seed and animals will be developed. The best devices and implements will be used. Crop rotations will be worked out for different Southern conditions. Demonstration agents, rural school supervisors, State and county superintendents of education, and other workers will make this farm a rallying-point, in order to carry back to their States the benefits of the work done there. Corn-club boys and canning-club girls will also make occasional trips to this agricultural Mecca for inspiration and intruction. The pure-bred products of the Knapp farm will be offered as prizes to the boys and girls who do the best work."

Farmers will be taught "to become more efficient producers, more economic citizens." But something more than the economic aspect will be considered, since "living in the country must be made more convenient and interesting before men and women, boys and girls, will be content to remain on the farm. The Knapp School, by promoting health and sanitation in the country, by teaching improved methods of road-building, by promoting cooperation in providing highways and modern facilities for transportation, will contribute toward the desired end." Finally,

"This school of country life will become a clearing-house for the rural communities of the South, a center for the exchange of valuable ideas and information practically tested. The farm demonstrators will live upon the farm for several weeks in the summer. The faculty of the college will work out their ideas here for the twelve months in the year. The teachers of the South who come to George Peabody College for Teachers for training will cooperate in studying and in meeting the needs of an ideal country community. They will be allowed to carry back home no theory which they have not first worked out and tested in practical life.

"Thus those who teach the adult farmers and their wives will come to understand those who teach the children, the prospective farmers and prospective housewives. The teachers and the farmers will work together. The school and farm will, in other words, be a storehouse to which the practical farmer and his wife will come for tested knowledge, and at the same time a practise school to which the maker of citizens, the teacher, or demonstrator, will come to try out his theories before being allowed to apply them."

OUR FIRST SINGLE-TAX CITY—The most important election that was held last month, in the opinion of single-taxers, took place in Pueblo, Colorado. Other cities, observes the single-tax Chicago *Public*, "voted on questions more or less superficial," but "Pueblo has taken action on a fundamental matter." It is further noted that while cities often elect reform administrations only to see the "gang" come back at the next election, experience in other countries has shown that no city which has once adopted the single-tax system has ever voluntarily given it up. *The Public* has additional confidence in the permanency of Pueblo's experiment because one of the new city commissioners is an out-and-out single-taxer, while "two members of the old board which had endeavored to keep the single-tax amendment off of the ballot were recalled." Quoting further from *The Public's* modestly exultant editorial on the Pueblo victory:

"In declaring for the single tax in municipal affairs the voters of the city have put themselves on record as favoring the first effective step toward social justice. Comparatively few persons, outside of Pueblo, were aware on election day that in that small city was being fought an issue of more importance than any issue at stake in the country's metropolis. Not many more realize that fact even now. But it is a fact nevertheless. The putting into effect of single tax in Pueblo must furnish an object-lesson that must teach other cities the wisdom of adopting the same policy. The experience of New Zealand, Australia, and Canada has shown that no city which has once adopted the single-tax system has voluntarily abandoned it. That is the difference between adoption of a fundamental reform and adoption of such superficial reform measures as replacing gang-ruled officials with better men. While the nation was watching New York City to see whether the voters would overthrow an individual boss, the voters of Pueblo struck at the foundation of bossism. Little Pueblo has done far more than big New York to put an end forever to boss rule."

MAYOR SHANK'S ABDICATION

THE SELF-DEPOSED MAYOR of Indianapolis is anything from a true champion of justice to a mountebank and a shirker of well-defined duties, depending upon the degree of admiration or hostility with which he is viewed by the radical or conservative newspaper you may happen to be reading. Most of the editorial writers, being of a conservative bent, blame him for not using the police force to suppress disorders during the recent street-railway strike, and regard his resignation as the best act of his career. The trouble which led to the ending of Mr. Shank's spectacular official life, as told in the press of his city, began several weeks ago when he refused to place policemen on trolley-cars to guard strike-breakers. He was denounced as a sympathizer with the strikers, and the State authorities were called upon to prevent rioting. When the traction strike was settled, the teamsters and chauffeurs threatened to quit work. Mayor Shank got the consent of the union officials to have the differences arbitrated by a committee of fifteen, five to be selected by the unions, five by the employers, and five by himself, but the employers rejected the plan. The Safety Committee of the Chamber of Commerce had threatened to start impeachment proceedings if Mr. Shank again refused to protect strike-breakers with the police, and when the employers refused to arbitrate, he resigned. The opinion of the Columbia *State* is that "there came a time when the office of Mayor required a man instead of an auctioneer and a mountebank—and the office was morally vacant." And the Chicago *Inter Ocean*, another severe critic, says that Mr. Shank "tolerated private war in a city for whose public order he was responsible," and "goes out of office without respect and in disgrace." Less condemnatory, the Indianapolis *News* remarks that Mr. Shank's retirement under criticism "indicates partial failure on his part in combination with other circumstances." "Looking back over the last three years and eleven months," continues *The News*, "one can not escape the conviction that, despite many shortcomings, Mr. Shank's actions have been those of a sincere man, actuated by impulse more often than by forethought, and whose general desires, had they received proper support, would have wrought much good for the city." The New York *Tribune* condemns Mr. Shank's policies without denouncing him personally, and heartily indorses his resignation:

"It was the only honest thing for him to do.

"The threat of impeachment, made by a committee of business men, grew out of the Mayor's obstinate belief in the use of 'moral suasion' on strikers. Tho 'moral suasion' proved as ineffective in protecting property during the car men's strike as did the Shank municipal markets in stemming the rise in the cost of living, he, nevertheless, was preparing again to try it on the teamsters in their projected strike.

"A man who believes in sticking to his principles, right or wrong, should not ask an entire community to suffer martyrdom for their sake. The Mayor said that if he could not persuade the teamsters not to strike he would get out, and he has. He deserves the thanks of Indianapolis."

ANOTHER TRANSPORTATION STRIKE.

Mayor Shank, whose favors to union labor during the Indianapolis street-car strike led to his resignation, here finds himself confronted by another problem in locomotion.

In sharp contrast to this is the view of the Socialist New York *Call*, which thinks he "goes out as Mayor of Indianapolis because he did a brave thing, because he dared face a certain serious situation." Its justification of his policy is thus elaborated:

"What he did while in office shows the new development of Americanism. The people really want to live decently. Shank tried to give them that opportunity. His attempts at reducing the price of living brought him into general notoriety, but he evidently had an idea beyond that.

"When he attempted to settle the strike of the street-car men by refusing to put the police on the cars, then he, instead of receiving applause, was greeted with general condemnation.

"Then he went up against a serious obstacle. There was the possibility of his being impeached. There was the possibility that because he had refused to put the police upon the cars as strike-breakers he would be thrown out of his office and would be branded as a malefactor. There was the chance that this man, who had really started a fight, would go to prison.

"He was right in resigning.

"Who was there that came to consider his case or to help him? Nobody. He was left to fight it alone.

"He is one of the men that we develop in the United States whom we must turn over to the uses of others.

"There was the case of Wiley, Chief of the Bureau of Chemistry of the Department of Agriculture. We allowed him to be sacrificed. Likewise we allowed Gifford Pinchot, Chief Forester, to be sacrificed.

"When we have a man we do not recognize the fact. . . . . .

"He is not a Socialist. He knows nothing about Socialism. But he understood a labor problem when it was before him. In resigning he refers it back to the people of Indianapolis. And in so doing he shows what the source of power is and should be."

This article would hardly be complete without a review of Mayor Shank's public career, as his numerous official acts which have attracted attention may explain to some extent the cause of his attitude in the industrial strife of the past few weeks. The story is told in the news columns of the Indianapolis *News:*

"During the earlier part of his administration, Shank achieved considerable notoriety by the methods he employed in handling the saloon situation. Saloon-keepers who violated the law were called before the Mayor, and in many instances he suspended the licenses for periods varying from a few hours to sixty days. In one instance he suspended the license of a saloon-keeper until the latter could produce a certificate from a minister that he had attended church. On the following Monday the saloon-

keeper produced the certificate and was permitted to open his saloon again.

"Another fight in which Shank took considerable interest was that for a reduction of fire-insurance rates. This resulted in the improvement of the fire department, three new fire-engine houses being built, considerable equipment purchased, and more than forty men added to the department. The insurance interests, eighteen months ago, announced a reduction in rates, aggregating about $200,000 a year. A new fire headquarters building is nearing completion.

"In 1911 Shank achieved an international reputation because of his fight against the high cost of living. He found the city market was failing of its original purpose as a meeting-place for the producer and the consumer. He also found that foodstuffs were manipulated by local commission men with the result that the highest prices existed, altho the supply outside of the city was large enough to reduce prices locally if the commission men would permit a large supply to enter the city.

"Shank determined to make a personal test and had shipped to the city sixteen car-loads of potatoes, which he retailed in the city market at 75 cents a bushel. When the sale started the local wholesale price was from $1.05 to $1.10 a bushel, and the retail price was as high as $1.40 a bushel. Both the retail and wholesale prices dropped overnight and did not regain their former high marks. Shank also conducted poultry sales on a similar plan. He outlined a plan to preclude manipulation of foodstuffs, but the plan was defeated by the city council.

"The plan attracted international attention, and Shank was called to various parts of the United States to deliver addresses on the high cost of living.

"Other achievements of the Shank administration were the adoption of plans for the elevation of steam-railway tracks in the central part of the city, and the erection of an experimental sewage-disposal plant. The police department was increased by the addition of ninety men.

"Shank was county recorder for four years beginning January 1, 1903. His campaign for election to that office was made in company with Booth Tarkington, who was a candidate for election to the State legislature. Shank is an auctioneer, is interested in a storage house, and expects soon to begin a vaudeville engagement."

Shank's successor is Harry R. Wallace, who as controller was automatically promoted to the mayoralty. Mayor Wallace immediately reversed the Shank police policy in connection with the labor disturbances.

LESSENING NEGRO LYNCHINGS—Even a very small reduction in the number of lynchings encourages Dr. Booker T. Washington, because it really "means something in the way of a higher civilization." In the first ten months of this year forty-five persons were put to death by mob law, but, according to the figures furnished by the eminent negro educator, this is a reduction of 4 over the same period for 1912. As one of the leading representatives of his race, Dr. Washington wishes to remind Caucasian readers of the daily papers that only 7 of these 45 victims were even charged with "the usual crime." And in his letter to the press he notes some of the reasons why negroes have been deemed worthy of sudden death by their white neighbors. He cites cases of negroes lynched for "making insulting remarks" to white women, for "frightening women and children," for "being lawless." A colored man in a Louisiana village was lynched "for striking an Italian merchant who had swept dirt on the negro's shoes as he was passing the store." In the case of two colored farmers lynched near Germantown, Kentucky,—

"No motive was assigned for the lynching. The [Memphis] *Commercial Appeal*, the leading white newspaper of Tennessee, in commenting upon the lynching, said: 'Two apparently inoffensive negroes, good farm-hands, real wealth-producers, were assassinated.' *The Commercial Appeal* further stated: 'As far as any one knows, they were quiet, orderly country people.'"

Perhaps one reason for the weakening of Judge Lynch's sway may be found in such an incident as this, which contrasts pleasingly with the other incidents Dr. Washington reports:

"Aug. 18—The sheriff at Spartanburg, S. C., in spite of the fact that dynamite was used, prevented a mob from lynching a negro accused of assaulting a white woman; he was tried later before a white jury and found not guilty."

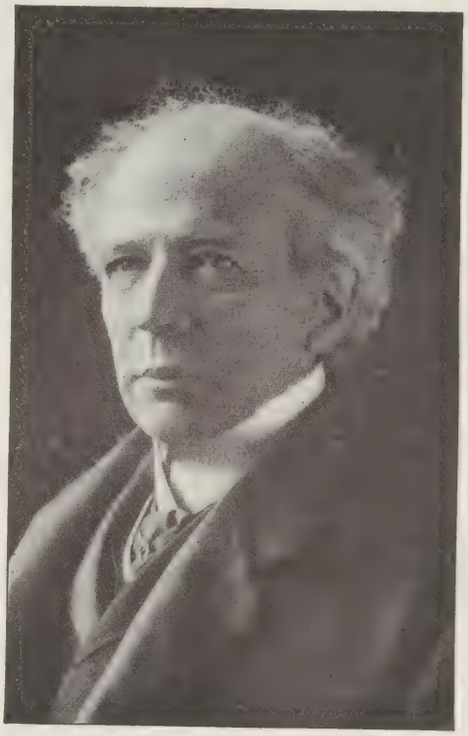
FOREIGN COMMENT

BREAD OR DREADNOUGHTS FOR CANADA?

THE PINCH of high prices has started the cry in Canada for the free entry of foodstuffs, and Sir Wilfrid Laurier, with his usual astuteness, voiced the demand a few days ago in a speech in Hamilton. "Free food before dreadnoughts" was his text. Premier Borden beat Laurier on the issue of giving Canadian dreadnoughts to the British Navy, it will be remembered; now Laurier may "turn the tables" on him, in a sense, by a campaign for a free market-basket. Many will say at first that Canada raises its own provisions and feeds England besides, so that tariff-cutting will have no effect, but a reference to the Statesman's Year Book shows that Canada imports $9,000,000 worth of breadstuffs, $5,600,000 worth of tea, $16,500,000 worth of sugar and molasses, and $4,000,000 worth of other provisions, besides $2,200,000 worth of living animals and $11,600,000 worth of fruits and nuts. Sir Wilfrid brought out the additional surprizing fact that living cost is rising faster in Canada than in England, and said, as the press report him:



"FREE FOOD BEFORE DREADNOUGHTS."

This is the issue Sir Wilfrid Laurier injects into Canadian politics, and proves that at 72 years he is still a leader.

"What is of immediate interest to the people of Canada to-day? Not the price of dreadnoughts. There is one thing which at this moment engages the minds of the Canadian people from the Pacific to the Atlantic ocean: it is a far more prosaic and far more vital question. It is the question of the high cost of living. . . . . .

"A table of statistics lately compiled by the British board of trade, which is known for its accuracy, has stated that the cost of living had increased 7 per cent. in Great Britain during the last decade, and in Canada 51 per cent. Now, just one point here. Reflect that Canada produces yearly 200,000,000 bushels of wheat, while the local consumption is only 50,000,000 bushels, and the surplus has to find a market abroad. Up to this time practically the only market has been the market of Great Britain. If, then, we reflect that Great Britain has to import all the wheat which she consumes, and if we reflect further that the price of wheat and the price of bread is cheaper in Great Britain than in Canada, then you have to agree with me that there must be something rotten in the state of Denmark."

He proceeded to advocate the free entrance of foreign foods into Canada in order that Canadian producers might no longer be enabled by the tariff exclusion of competition to inflate the price of such staples. This new political issue is approved by the Liberals, but some Conservatives deride or condemn it as a mere party bid with a view to gaining influence at the polls. The Liberal Halifax *Morning Chronicle* declares that the question is not a party issue and urges both sides to unite on it. Thus we read:

"Nothing could be more timely and patriotic than Sir Wilfrid Laurier's emphatic declaration for free food for the Canadian people. To make it more significant and more encouraging, it has to be noted that Sir Wilfrid is following, not leading, public opinion, both Liberal and Conservative, in this matter. He will have the unanimous approval of the intelligence of Canada, irrespective of party. All recognize that present conditions are intolerable, and must be ameliorated without delay. A large part of the necessary food of the people has already become prohibitive in price, and is daily becoming dearer."

The Toronto *Daily Star* also approves "Sir Wilfrid Laurier's clear-cut declarations for untaxed food," and the London *Advertiser* thinks that "of more importance than dreadnoughts to Britain is comfort to the homes of our people," and continues pointedly:

"Wealth may accumulate in certain sections, but the average man has but little share. And when the children cry for bread a dreadnought will not relieve their hunger."

The Montreal *Daily Telegraph and Daily Witness* is in accord with this opinion, and declares the speech "a clarion call to action." Further:

"It is the speech of a fighter convinced of the high importance and the justice of his cause; it is a pronouncement that comes straight from the heart of one whose whole life has been devoted to the service of the people and the upbuilding of the nation. Sir Wilfrid sees a great danger to the national well-being in the unprecedented rise in the cost of living—a rise which within a few years has changed Canada from one of the cheapest places to live in to absolutely the dearest place in Christendom."

Quoting the opinion of Arthur Chamberlain, brother of the once active political leader, Joseph Chamberlain, that "a tax on bread is the cruelest tax on earth," the Winnipeg *Tribune* observes:

"What would such a man say if he lived in a British country like Canada, where the cost of living is enormous, one great cause of the extortion being the government and supplemental taxes imposed on what the people eat and wear?"

The Conservative press, however, argue that the rise in living cost has little or nothing to do with the tariff. The Montreal *Patrie* admits that the advance in prices is alarming, but is "not prepared to admit . . . that the abolition of tariff laws would bring an adequate remedy for hard times," for "the dearness of living results from other causes, deep and complicated." The Toronto *Daily News*, too, scoffs at "Sir Wilfrid's bad luck in starting such a hare," and tells us:

"Sir Wilfrid Laurier's adoption of reciprocity cost the Liberal party the loss of office, and it looks as if he has now made another false step on the tariff question. He proposes to deprive the Canadian farmers of all protection on what they sell and still make them pay duties on what they buy. . . . . .

"But we have additional indications that the Liberal leader's departure is most unfortunate in its untimeliness. Sir George Paish, editor of the London *Statist*, who is shortly to address the Canadian Club of Toronto, is one of the foremost authorities

in the world on trade and economies, and in his opinion consumers all over the world are about to enjoy a considerable reduction in the cost of living."

The Toronto *News* thus states what it considers to be "the mesh of paradoxes" in which the ex-Premier has entangled himself:

"Unless the cost of living is higher in the United States than in Canada, our farmers will not sell much of their produce there. If it is higher, the removal of the Canadian duties would not cheapen food on this side of the line. On the other hand, if farm produce is cheaper in the United States than in Canada, the Canadian duties can not be abolished without injuring the Canadian farmer. Moreover, we can not have free trade in what the farmer sells without giving him also free trade in what he buys. This is the many-sided difficulty into which Sir Wilfrid Laurier has got himself by his new declaration of policy.

"There is no evidence that the cost of living has been lowered in the United States by the lowering and abolition of food taxes through the Wilson tariff."

It is a mere "free-food slogan," sounded for electioneering purposes, declares the Ottawa *Evening Citizen*, supposed to be Mr. Borden's special organ. To quote the following jeering sentences:

"At last has been sounded the slogan by which the Liberals, under the leadership of Sir Wilfrid Laurier, will once more try for political domination in Canada. After two years of mental vacuity, following the hard blow of 1911, the party staggers to its feet and cries, 'Free food!' It is not to be inferred from this that the state of political poverty in which it finds itself has made the attraction of the free-lunch counter the basis for the cry. It is rather to be seen that hunger has sharpened the wits, and that advantage has been taken by the opportunist Liberals to seize upon the conditions caused by the high cost of living, to make a superficial appeal to the people who suffer as the result."

ZANGWILL FOR THE SUFFRAGETTES

THE CLAMORINGS and violence of the British suffragettes have found an eloquent advocate in Israel Zangwill, the gifted romancer of the Ghetto. In *The English Review* he treats their imprisonments as martyrdom and compares their self-sacrifice to that of the Japanese patriot who commits *hara-kiri*, or the women who welcome the suttee as the shortest way to reunion with the object of their love. In Mr. Zangwill's eyes they are heroines, stoned and beaten, ducked in horse-ponds, obscenely maltreated, imprisoned with drunkards and pickpockets, sentenced to penal servitude, loathsomely fed by tubes and pumps—yet their woman's war remains unstained by blood other than their own. "Captain Scott perishing in the antarctic snows for lack of food was less essentially heroic than they." Of one of the leaders of the cause this writer says:

"ENGLISHMEN ARE NOT SO BRUTISH THAT THEY CAN BEAR THE SIGHT OF MARTYRED INNOCENCE."—*Zangwill.*

"Miss Christabel Pankhurst has taken her motto from Blake:

> If the sun and moon should doubt,
> They'd immediately go out.

She combines the spiritual assurance and practical genius of a St. Catherine of Siena with the determination of a hustler and the logic of a Bachelor of Laws. There is, perhaps, something of Manchester in her machinelike rigidity. But it gives her the invaluable quality of decision. And never was this quality exhibited more finely than in her handling (from her Paris exile) of the problem of bringing out *The Suffragette* when printer after printer was warned off by the Government. Her refusal to let the Labor party print it was a master-stroke.

"Inferior to her mother as an orator, despite her vivacity and charm, and only occasionally touching the same high note of religious simplicity, she seems to have carried away the graver and greater figure by her cocksureness. It is the young generation kicking at the door. 'When should the Government give us the vote?' 'To-day!' That is the note of Christabel. That the Government would risk an internal crisis that might overthrow the still unstable results of many sessions, that the Irish and Labor parties are only pursuing the same single-eyed system as herself, does not diminish her resentment at not being served first. There is nothing she despises so much as the M.P., she has told us, nor is Parliament a career she would ever contemplate. That sounds like a touch of masculine inconsequence, the one breach in the relentlessness of the female logic."

"MILITANCY IS ONLY SUCCESSFUL IN SO FAR AS IT BRINGS SUFFERING TO THE MILITANTS."—*Zangwill.*

Of their contempt for suffering, their defiance of death, their daring and persistency, Mr. Zangwill says:

"*Hara-kiri*, the one resource of the suffragettes, turns out to be their strongest weapon. Englishmen are not so brutish that they can bear the sight of martyred innocence. The heroic suicide of a lady of wealth and station on the public doorstep of the Derby is worth a wilderness of fires, and the cross that was borne before her body at the great funeral was a more victorious symbol than the hammer. Militancy is only successful in so far as it brings suffering to the militants. If this were a real war, could one say the greater their casualties the nearer their triumph? In war you menace the enemy with death. Mrs. Pankhurst is menacing the enemy with her own death. Even allowing the Government merely the wisdom of knowing that the blood of the martyrs is the seed of the Church, the fact that she is not allowed to die, even tho Ministers are at their wits' ends to keep her and the law alive together, is a comforting reassurance of human progress. Four years ago, Mrs. Pankhurst said in the dock: 'Our words have always been—be patient, exercise self-restraint, show our so-called superiors that the criticism of women being hysterical is not true, use no violence, offer yourselves to the violence of others.' Militancy was born out of despair of constitutionalism: out of despair of militancy, Mrs. Pankhurst has come back to the teaching of Corinthians. Crime is now merely a cover for her hunger-strike. Her utter selflessness, the unbreakable energy of that frail body under the Cat-and-Mouse Bill (aptly compared to the Iron Maiden of the Middle Ages, whose iron spikes slowly squeezed out the life of the victim), the noble eloquence which moved the prosecuting Attorney-General, Sir Rufus Isaacs, to tears—these are beginning to tell even on the clergy, always the last to recognize religion in its contemporary vesture. Even bishops have demanded the death of the Cat-and-Mouse Bill, that bungle of benevolence and barbarism devised in a panic to save the forms of law, and carried finally through the House of Lords—whose function, according to Asquith, is to 'impose delay'—in sixty seconds. But the bill has been killed without prayers in aid."

Mr. Zangwill concludes with a slap at the shilly-shallying of the British Prime Minister:

"The errors of political novices adventuring in unmapped territory but offering their life for their cause will seem small to posterity in comparison with the Liberal leader's sin against Liberalism. That the protagonist of the people, the historic overthrower of the Lords, should be the evil genius of the woman's movement, is a tragic paradox. Mr. Asquith is a statesman of grave and lofty conceptions and otherwise unblemished honesty, but his latest pose that there is little to be said on one side or the other is more amazing than his ancient antagonism. That was self-stultifying, but dignified; this is unpardonable frivolity. A recent cartoon in *The Suffragette* represents Justice as saying to him: 'Why not give them the vote, and release me from tasks that are an outrage on my name?' And Mr. Asquith replies: 'Now, enough of that, my woman. I've suspected all along you were on their side.' If he did not suspect it all along, he suspects it now. And the public at large suspects it, and is more ready to receive women's suffrage than many a project which politicians palm off upon it. That Women's Suffrage will pass over the body of Mr. Asquith is one of the few certainties of the near future."

FERRERO ON AMERICAN PROGRESS

FERRERO, the Italian historian who has written so trenchantly on Rome, Greece, and Egypt, and is now turning to more modern history, is publishing a book entitled "Between Two Worlds," in which he contrasts the settled conservatism of the Old World with the restless spirit of change and advance which is the main characteristic of the present day, especially in the United States. He states that Rome, either ancient or medieval, did not aspire after what he calls "progress." Progress is declared to be a modern invention. Everything in Europe was intended to remain just as originally built. The very monuments and buildings were constructed for perpetuity. But in the nineteenth century America, he says, taught the world a new lesson. Progress, he thinks, is the modern god. Its worship began in the eighteenth century, and in the nineteenth faith in this progress penetrated even the masses, urged on by the immense advances in science and industry. When we come to Marconi and his marvelous development of electricity, we can see how far we have left behind the discoveries of Benjamin Franklin.

Mr. Ferrero thinks that the outlook of individuals and nations in these days is too wide and too ambitious. We expect too much and are too apt to say with Cato:

> No narrow Utica confines our powers,
> For the whole boundless universe is ours.

To quote his description of ancient and modern ideals of life:

"The various civilizations from which ours has sprung were generally characterized by poverty. They limited their desires, they limited their ambitions, their spirit of enterprise, their daring, their originality, within certain definite boundaries. They produced few things and they produced them slowly, and while they suffered considerably from a deficiency of material comforts, they considered the increase of riches nothing more than a painful necessity. But they always sought to attain in everything and to attain through difficulties a certain type of perfection, artistic, literary, moral, or religious. The artistic character of almost all the industries of the past, the important place which was given to the decorative arts, the questions of personal morality, the ceremonial and forms of religion are sufficient proof of this. Quality was considered much more than quantity, and all the limitations to which the civilizations of the past submitted and which excite our wonder to-day were merely the necessary foundations on which the longed-for perfection was based."

He goes on to say that the characteristic of modern progress is a desire for quantity above quality, with the concomitant love of wealth to be acquired abundantly for its own sake. He says that in our epoch science has enabled producers of things beautiful or tending to the comfort of mankind to multiply indefinitely the things in which they deal and to distribute them in the widest and most distant markets. In America this progress has, at the same time, been promoted by the democratic spirit, which opens all the professions to anybody and multiplies personal competition while it also multiplies a competition of things that are produced. The world at present, taking example from America, aims at quick production, at production of things in ever-increasing quantities, and thus multiplying the number of consumers and producers.

But this writer thinks that if quantity is excessively sought after, quality must suffer. To quote his own emphatic words:

"Our civilization has been compelled to abandon the ideal of perfection. It is no longer a nurse of quality, but a promoter of quantity. And the difference between America and old Europe is that in America the principle of quantity is much more energetic than in Europe, where the ancient spirit of quality still asserts itself in spite of every obstacle."

This brilliant historian finally states the problem of progress in the United States.

"The spectacle of this Western world which we are now witnessing, is it in reality a glorious epic of progress or a gloomy tragedy of decadence? It is not probable that mankind can escape from the cruel dilemma created by this question so long as the present phase of our civilization endures. But the sense of this dilemma after all has been the incentive to that conquest of the earth which man has accomplished and of that prodigious development and progress of which we have been witnesses in the United States."—*Translation made for* THE LITERARY DIGEST.

ARMENIA'S SCATTERED CHILDREN

THE POINT OF INTEREST in Turkish history of to-day is passing from Europe to Asia, from the Balkans to Anatolia and Armenia. The Armenians are a race of Christians whose literature is very important, whose national sentiment is inextinguishable, and who for many centuries have suffered from two things—isolation and persecution by the Turks. It has indeed for a long time been the policy of Constantinople to Islamize the whole Empire, whatever the religion of the Sultan's subjects might be. This tendency reached its climax under Abdul Hamid. The consequence is that while the population of Armenia once numbered 3,000,000, not more than half that figure are now left in Turkey, the rest having scattered to Russia, Persia, Egypt, and, farther west, to the United States. Conditions have, however, recently changed. The Turk no longer persecutes and massacres the Christians in the valleys and foothills of the Caucasus, in Tiflis or Baku. But emigration still goes on, and we read in the *Puzantion*, the leading Armenian daily of Constantinople, that good, and not evil, results from this desertion of their native soil. Europe and America are educating these descendants of Japhet, who are being equipped with the knowledge and industrial skill of modern life, and we are told:

"The salvation of the nation is not only from the East, but from the West, from the Far West. The sons of these who have gone to the West, being educated there, by receiving higher instruction, by learning industries and by becoming rich in new enterprises, will remember their fatherland. This is our belief, the conviction of a patriot. So long as the scattered sons of our nation are in communication with each other by ties of duty and right, the colonies do not altogether perish. Pessimists object that the Armenian colonies of old days disappeared, so what right have we to believe that the new Armenian colonies will live longer? Do not America and other nations absorb and assimilate their immigrants into their own national life? There is a truth in this objection. But we must take into consideration two points. The old Armenian colonies for a long time resisted the great force opposing them. But the old Armenian colonies were almost cut off from the fatherland. Traveling was hindered by serious obstacles. Altho now the surrounding serious influence is more powerful, yet the facility of communication, the press, daily communication with the fatherland, keep alive the national spirit. A hundred years ago it was difficult for the Armenian emigrant to return home to marry, and it was difficult for young women to cross Asiatic lands for destinations far away. To-day the marriage of Armenian emigrants with Armenian girls is very easy. Many also have in the fatherland parents and relatives to whom they send money, and the money sent by Armenian colonies in Europe, America, and Egypt is a large sum."

But it is particularly from the United States that the Armenians are to receive the fulfilment of their hopes. Educated and trained in this country, they return to Asia enlightened and equipped so as to raise the drooping spirits of their countrymen and assist in the resuscitation of their national life. To quote further:

"There are to-day about 100 Armenian young men and women who have received degrees from American universities or are on the point of finishing their course. If a part of these find work in America, another part is ready to return back, some are even under oath to work for a certain period in the fatherland. Armenians in America have their churches and schools, and do not forget the Armenian language and history. Armenian students in America who enter universities and those who pursue special courses will work for their nation, and become leaders in the future civilized life of the Armenian fatherland."—*Translation made for* THE LITERARY DIGEST.

SCIENCE AND INVENTION

KINESTHESIA, QUEEN OF THE SENSES

THE HIGHEST RANK among the senses is usually awarded to sight. This is doubtless correct, psychologically, but, from the standpoint of physiology, another sense deserves the crown. According to Dr. George Van Ness Dearborn, professor of physiology in Tufts Medical School, this is the so-called "muscular sense," which he names "kinesthesia"—the sense through which we are conscious of the motions of our body and its parts. According to Dr. Dearborn, this sense makes it possible for us subconsciously to control all our bodily acts; it enables us to possess that quality called skill; its deficiency, carried to an extreme, may result in utter feebleness of mind, lack of control, and inability to live the life of sanity and normality. These opinions Dr. Dearborn deduces from experiments made by him recently on the behavior and functions of this important muscular sense. Contributed first to *The American Journal of Psychology*, Dr. Dearborn's paper has now been reprinted in separate form, and the quotations given below are excerpts from it. He writes:

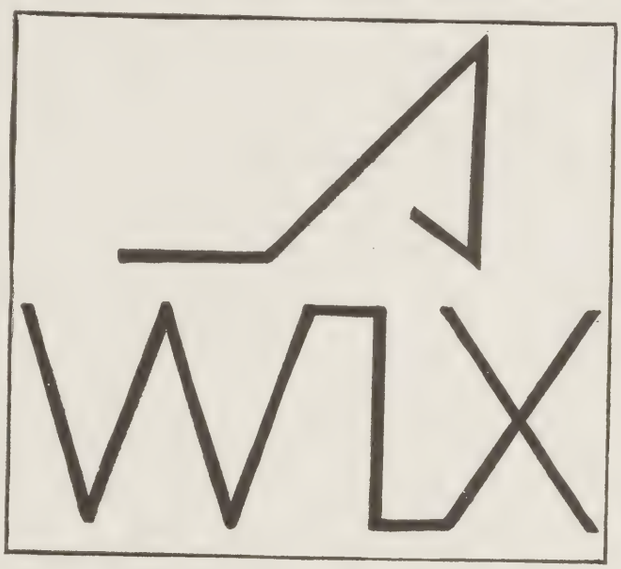
HE INVESTIGATED KINESTHESIA.

Dr. Dearborn finds in it the power that gives us skill and saves us from physical and mental feebleness.

"Just as, psychologically considered, vision is undoubtedly the 'queen' of the senses, so physiologically the processes inherently relating to movement, posture, weight, spatiality, etc., are assuredly the most important. In the universal integration of sensations, vision in a way may even be considered the mental homolog of the bodily kinesthesia, as a little thought readily shows. Only now are educators beginning to realize the indispensable usefulness always and everywhere of kinesthesia, the 'feelings of movement.' Kinesthesia is about, however, to come into its own as the primary and essential sense. Without it, coordinated and adapted bodily movement and strain, concomitant to every kind of mental process, is inconceivable, for the (psycho) motor centers in the brain have no known clairvoyant powers, and therefore their function of carefully coordinating the distant muscles, *e.g.*, of foot or hand, is entirely dependent on their continual reception of detailed information as to the relative tonal and contractural status of all the active parts to one another. Simple as this idea is, the immense practical importance for education has as yet hardly begun to seep into the effective minds of educators."

His series of experiments on the physiology of kinesthesia deals directly, Dr. Dearborn tells us, with the functions of the nerve impulses concerned in the so-called muscular sense. The nerve processes that determine voluntary movements have been much discust of late by psychologists, while the physiologists have been clearing up the physical side of the same question. Dr. Dearborn considers that his work forges the links connecting these two chains of information. The tests were made on thirty-eight different persons blindfold, each of whom was asked to reproduce, with a pencil, the patterns shown in the accompanying diagram, without seeing them, the pencil being first guided over the pattern. Reproduction thus depended entirely on the muscular sense. The results of the test are thus set forth by the investigator:

"Perhaps the most interesting for the physiology of kinesthesia is the fact that reenforcement of the conscious movement-sensations by deliberate attention to them tends to shorten the movements and somewhat to lessen the angles between them. In other words, in visualizers, intensification of the conscious kinesthesia inhibits the related voluntary movements. Such being the case, it is difficult to avoid the conclusion that the function of the conscious movement-sensations is the inhibition, the deliberate active restraint, of tendencies to action. Attention to matters other than the kinesthesia of the active arm, as was demonstrated by trial, tends to stop the performance altogether, or to make it irregular, uncertain, and wabbly. Attention to the kinesthesia, on the other hand, tends simply to make the movements less, while they continue deliberately to the end without hesitation, but minimized. Considering that the movements studied are free-arm movements from the shoulder-joint, tending therefore to exaggeration far beyond their true size, this result becomes all the more striking. Almost no records, per contra, showed enlargement under these circumstances, also a significant fact where the voluntary conditions are so complicated and uncertain. . . . May we not conclude that the more or less conscious kinesthesia . . . has special inhibitory function, as well as the passive reception of jars, vibrations, passive movements, and postures?"



CAN YOU DRAW THIS BLINDFOLD,

After tracing it? If so, your kinesthesia is working well.

Skill, according to Dr. Dearborn, consists in a "trained fusion" of our outer ideas of motion and the inner control which he regards as the function of the muscular senses. Lack of skill, and especially the abnormal lack known as "feeble-mindedness," now an object of much study in the educational and economic world, Dr. Dearborn regards as due to deficiency in kinesthesia. He writes:

"Without multiplying evidence of the aimless and ill-directed gross motivity of the feeble-minded . . . we may reasonably express the tentative opinion that perhaps even the essence of feeble-mindedness is some lack in the kinesthetic

receptive fields or centers. These influences or stimuli continually bombard the central adjusters, and so give rise to the activity which, guided and helped by the cerebral gray (biological will and intelligence and motive), results in curiosity, interest, psychophysiological evolution and education. Education is the reaction of personality to its environment; and reaction is inconceivable without kinesthesia. Certain is it that I at least can get no clear concept or understanding of the vegetative impulse to activity in a complex organism, which lacks that kinesthetic deluge of energy into the reflex motor centers by which directly the voluntary muscles are actuated.

"In short, the 'attitude,' actuating and inhibitory, unconscious and conscious, is the creation, to a greatly predominant extent, of kinesthesia."

TEXTILE PATTERNS FROM NATURE

A STRIKING METHOD for producing textile designs from natural products by photography has recently been discovered by Dr. Erwin Quedenfeldt, principal of the Photographic Testing Establishment at Düsseldorf, Germany. The process, which utilizes the forms of crystals, flowers, and other animal, plant, and mineral products, was described recently by the inventor at the Crefeld Technical School. The designs given herewith are from *The Textile World Record* (Boston, November), which has translated the accompanying text from the *Textil Zeitung* (Berlin). We read:

"The camera is provided with a special apparatus by which the image is reproduced in manifold form with as much clearness and strength as with the ordinary camera. The process is similar to that of the kaleidoscope, but no mirrors are used, as it has been found that the reflection of the image from the mirror results in making the photograph cloudy. The new process is very rapid and simple.

"The plate is exposed for the necessary time and then developed. The photograph is printed from the negative in the ordinary way and the design can then be enlarged or reduced as desired. A large number of different patterns can be obtained by cutting the object. This is shown at Figs. 1 to 4. Fig. 1 is a pattern obtained from a specimen of crystallization. Fig. 2 is the design obtained after cutting away part of the specimen. Fig. 3 shows the results of further cutting. Fig. 4 is a reproduction of the central part of the pattern. In this way a large number of interesting combinations can be made from one object.

"Figs. 5 to 8 are other samples of the results obtained from this new process of pattern-making. Fig. 5 is a design obtained from the colored ring of an agate. Fig. 6 is a reproduction of the black and white marking in a piece of marble. This design is a combination of two patterns obtained by photographing the same sample of marble. Fig. 7 is obtained by photographing the yellow and white wing of a butterfly. Fig. 8 is obtained from flowers. This process opens up a rich field for the cotton-print industry. It is recommended not as a substitute for the work of a designer, but as an important aid in obtaining new motives for his productions."

WHEN EUGENISTS DISAGREE

APPARENTLY an international eugenic war is on. The work of the American school, as represented by Prof. C. B. Davenport, director of the Eugenics Record Office, at Cold Spring Harbor, is seriously attacked by the English, represented by Dr. David Herron, of the Galton Laboratory. The difference of opinion between these two schools is apparently of long standing. Dr. Davenport was from 1908 to 1909 coeditor of the English journal *Biometrika* and connected with the Galton Laboratory. His refusal to accept the law of ancestral inheritance propounded by the laboratory's founder led to his resignation in 1909, and to his subsequent entrance into the eugenics research carried on in America under the direction of the Government and the Carnegie Foundation. Dr. Herron formulates his criticisms as follows in a monograph, whose essential paragraphs are thus quoted in the New York *Times:*

"Probably nothing during the course of the last twelve months has been more detrimental to the true progress of eugenics as a science than the papers read and the statements made at the recent International Eugenics Congress. In some branches of knowledge little harm would be done by the statement of erroneous conclusions; no public opinion would be based on them, and there would be no likelihood of social action resulting from them. But with eugenics the matter is wholly otherwise; racial improvement and racial deterioration interest large masses of our citizens who have no means of ascertaining whether a given statement is or is not a great scientific verity. . . . . .

"We have no intention at present of entering into a general review of the current literature of eugenics. We propose to confine our criticisms to certain recent American work which has been welcomed in this country as of first-class importance, but the teaching of which we hold to be fallacious, and indeed actually dangerous to social welfare. We have selected this rounded group of papers because they deal with a very pressing subject, that of mental defect, and in our opinion form an apt illustration of the points just referred to, *i.e.*, careless presentation of data, inaccurate methods of analysis, irresponsible expression of conclusions, and rapid change of opinion.

"Let us try to realize some of the points on which the science of national eugenics has to advise the general public. What advice are we to give the normal members of insane stocks with regard to their marriage? What advice are we to give to the state with regard to the epileptic or mentally defective? . . . . . .

"'At last it is possible,' writes Dr. C. B. Davenport, 'to give definite advice to those about to marry who do not wish to transmit their undesirable traits. . . . Weakness in any trait should marry strength in that trait and strength may marry weakness.'

"It is absolutely necessary to nail such false coin to the counter, and to do this it suffices to appeal to that Mendelian theory of which Dr. Davenport is such an ardent advocate. Most pathological 'weakness' is said to be recessive, most 'strength' to be dominant. Hence, a 'strong' person is either a

FIG. 8. RESULT OBTAINED FROM FLOWERS.

PROCESS OF PHOTOGRAPHY FROM CRYSTALS, AGATE, MARBLE, FLOWERS, AND A BUTTERFLY'S WING.

pure dominant or a hybrid with a latent weakness. The marriage of 'strength' and 'weakness' would thus lead either to all the children having the defect latent, or to 50 per cent. having the defect latent and 50 per cent. may actually show the defect!

"Yet we are told that 'strength may marry weakness,' altho the penalty is that all the children will carry and 50 per cent. may actually show the defect! If 'strength's' whole racial duty be summed up in having apparently normal offspring who themselves or whose children will marry other apparently normal individuals and develop afresh the patent 'weakness,' then we must indeed despair of eugenic teaching. Hæmophilia may lie latent for five generations, 'apparently normal' marrying normal, and then reappear to sweep off its victim."

Dr. Herron believes that those who dispassionately consider the American case must conclude with him that the material has been collected in an unsatisfactory manner, that the data have been tabled in a slipshod fashion, and that the conclusions drawn have no justification. The authors have in his opinion done a disservice to knowledge, struck a blow at careful research, and committed a serious offense against the infant science of eugenics. Every piece of unthorough work, says Dr. Herron, "begets its likes"; others find it equally easy to reach similar conclusions by loose methods applied to inadequate data. "They await the same chorus of praise from an uninstructed press, and from those whose passion it is to tickle the taste of the moment." He goes on:

"When we find such teaching—based on the flimsiest of theories and on the most superficial of inquiries—proclaimed in the name of eugenics, and spoken of as 'entirely splendid work,' we feel that it is not possible to use criticism too harsh nor words too strong in repudiation of advice which, if accepted, must mean the death of eugenics as a science. We are confident that Dr. Davenport's advice would have been as heartily repudiated by the founder of eugenics as it is by all members of the laboratory that bears his name. The future of the race depends on the strong mating with the strong, and on the weak refraining from every form of parenthood. Nothing short of this rule will satisfy the true eugenist."

To this, Dr. Davenport replies in the same number of *The Times* that the entire artillery of the Galtonists appears to be directed against the dictum "weakness should marry strength," which was the conclusion of a lecture delivered by the writer in New Haven. Of this he says:

"In that New Haven lecture I was discussing eugenics and not biology. I was discussing not so much a theory in the abstract as a theory applied. I was discussing the possibility of bettering a race by a more careful selection of mates in marriage. I was considering the Mendelian law, not as it is denounced in Dr. Pearson's *Biometrika*, but in its actual operation as a social force in the community. I attempted to put in the briefest form, comparable to the folk-saying, unlikes should marry, the main conclusions of the discourse. . . . . .

"I did say, and I still do say, that the best single, brief rule to follow is for weakness to marry strength. It is the only single rule that has half a chance of being followed, and what good is it for the eugenist to formulate a lot of advice that he knows will not be followed? To illustrate by hypothesis: Marry all the strong members of the community. There are very, very few of them, for a 'strong' person, in the strictest sense of the word, has no recessive defects, either visible or latent. Not only will these strong individuals run little risk of having children who are epileptic or feeble-minded, but they can be reasonably sure, for instance, that their children will not be unduly nervous or liable to certain recessive traits, such as non-resistance to infection.

"Then suppose that, as the extreme eugenist would have it, all the lowest in the class of weak persons, those who are insane and epileptic or in whom perhaps these traits are latent, are segregated and sterilized. What is left? You and I—almost the entire community—the great aggregate of people who belong neither to the small class of the strong nor to the class of the extremely weak. They may not have had epileptic grandmothers nor alcoholic fathers, but they may possess defective traits—say, for instance—a tendency to become hard of hearing—otosclerosis.

"I should advise the otosclerotic person, of course, to avoid marrying another otosclerotic person. I say that weakness in a trait should marry strength in that trait. I can not tell that otosclerotic man not to marry—he is going to if he wants to. All that I can do is to give him the best rule that he is likely to follow, and that is, to avoid the same weak trait when marrying, and to select some one who is strong in that trait; tho perhaps weak in another—say ability to spell. As a general rule, it is the strong traits in these two people that will appear in the offspring.

"There is weakness marrying strength. Theoretically it would be better if strength could always marry strength—that is undeniable. But how is it to be done? 'The future of the race,' says the Galton Laboratory Bulletin, 'depends on the strong mating with the strong, and on the weak refraining from every form of parenthood. Nothing short of this rule will satisfy the true eugenist.'

"Well, if nothing short of this rule will satisfy the true eugenist, then eugenics will for all time be a science shut up within the four walls of a laboratory, having no connection whatever with the life and conduct of people.

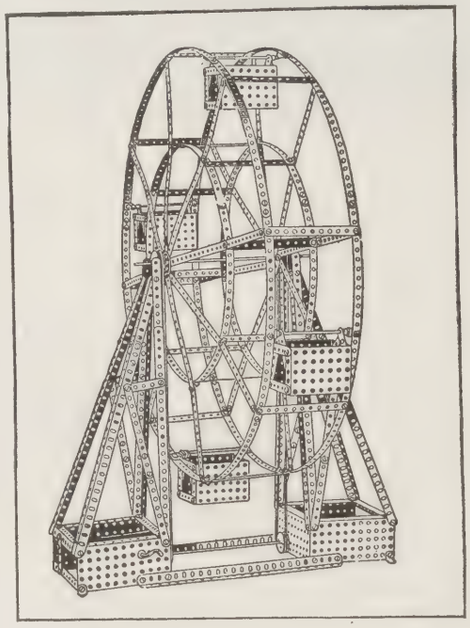
"Such a sweeping rule, if carried out, would reduce us in a generation or two to a mere handful of people; most of us would be forbidden to marry.

"The American workers in eugenics have not been unaware of this discrepancy between the pure theory and its application. They realized long since that compromises must be made, and that the only thing to do was to approximate the ideal, that of strong mating with strong, and to encourage the strengthening of stocks which, while weak in some one or more traits, were not dangerously so. We in America realized the folly of saying to the people: You may not marry thus and so. We have put the emphasis on the positive side, giving the best general advice on how to marry rather than how not to marry.

"We have abandoned the Old World scholasticism, and recognized the fact that if eugenics is not a social science it is of little value. There has been a concerted effort to make the work of the Eugenics Record Office accessible for every one, not for scholars and scientists alone. We have tried to place our findings at the disposal of the people who need them, the people who know the least about things biological."

EVERY BOY HIS OWN ENGINEER

TOY STRUCTURAL STEEL, from which an ingenious boy may build anything that a real engineer would make out of real steel members, is now being widely advertised and is a feature of the holiday exhibits. Some of the things that may be constructed in little by the skilful use of this material are bridges, derricks, engines—anything, in fact, from a toy wagon to a miniature printing-press. A writer in *The American Exporter* (New York, December) commends this as a realization of the young mechanic's idea to "build something himself." The boy with a mechanical mind, he says, is seldom satisfied with shop toys. He would a hundred times rather take a hammer and nails, and with what odds and ends he can find work out some idea of his own than to possess a whole houseful of ready-made locomotives and fire-engines, which, to his critical eye, lack many important details. The writer goes on:



FERRIS WHEEL MADE FROM TOY STEEL PARTS.

"These outfits consist of strips of steel varying in length and having holes punched at equal distances from end to end. Included in these sets are also gears, pinions, pulleys, flanged wheels, eccentric drive-wheels, axles, beams, etc., which give the boy all the parts necessary to build up almost any kind of a miniature machine. The strips are held together by means of small screws and nuts, and the structures that can be built in this way in a remarkably short space of time by any boy are declared to be surprizingly real in appearance. The various metal strips are formed in imitation of structural steel beams, and the young engineer in this way acquires a knowledge of the strength of materials and elementary engineering practise which many weeks of study from books would probably fail to impress upon his mind. He also becomes familiar with the forms of many of the well-known works of engineering and acquires a knowledge of the subject which can not fail to be of great value to him in later years, even tho he may not follow the engineering profession.

"Each piece of material . . . is nicely finished with smooth edges and rounded corners and nearly all the parts are nickel-plated. Everything which the boy would require is supplied with the outfit, even to a quantity of good stout string, for even this is not always obtainable in the home. A complete manual of instruction is also furnished with each set, which shows cuts of eighty different models that can be built.

"Small motors, countershafts, and transformers, also supplied, enable the boy to construct his own power plant."

AIRSHIPS AND ELECTRIC FLAMES—Sir Hiram Maxim has given it as his opinion that the Zeppelin *L2*, so disastrously destroyed in Germany, was set on fire by electricity generated by friction with the air. Evidently, if this is so, no dirigible balloon is safe, for air-friction can not be avoided, whereas gasoline explosions can. The aerial press is therefore decidedly down on Sir Hiram. *The Aeroplane* (London, October 30) attacks him thus:

"It is exceedingly painful to all those who respect the name of Sir Hiram Maxim for the undoubtedly valuable work he did in the early days of aerodynamic experiment to see him taking up the attitude he has in the press during the last week on the subject of the Zeppelin *L2* disaster, and it is unfortunate that Sir Hiram's name should have obtained for his views a publicity which would have doubtless been denied to the same theories had they been enunciated by an unknown person. His theory that the Zeppelin was set alight by electric flames caused by the friction of the air on the envelop is received with ridicule by all who are entitled to speak with authority on the subject, and it is practically beyond doubt that the fire was the result of a petrol explosion. One must remember that the speed of the Zeppelin at her best is not sixty miles per hour, and that a number of aeroplanes travel at speeds anywhere between sixty and one hundred and twenty miles per hour, yet none of these weird electric flames have ever been perceived on aeroplanes. The various instances cited by Sir Hiram Maxim in support of his theory deal with bodies moving through the air at speeds approaching 200 miles an hour, and in the case of the belt drive from which he extracted electric current there was definite friction between the belt and the pulley. The flames to which Sir Hiram refers bear, one fears, a relation to the *ignis fatuus*, commonly called the 'will-o'-the-wisp.' The connection between this and Sir Hiram's theories need not be elaborated."

SHALL WE BATHE?

A DEFINITE pronouncement against bathing is made by Dr. Elmer Lee, in *Health Culture*, a magazine edited by him. The objections to bathing are usually placed by humorists in the mouths of characters bearing the suggestive names of "Weary Willie," "Tired Tom," and so on; but apparently Dr. Lee desires to be taken seriously. He writes:

"Bathing is an acquired habit, unnecessary and even harmful. Cold or hot water showers or sprays, and any form of immersion, will be injurious in the end.

"Man is an air animal, not a water-beast.

"An aged woman asked me if it was good practise to chill the human skin with cold water to warm it? Cold bathing is recommended as a body warmer, so is a hot toddy of whisky, also a cold cocktail of whisky. Man has acquired many conceits.

"A bathtub is an enemy in the house. It is expensive and adds to the toil of women. Bathing begets false security against disease, weakens and injures the skin, extracts bodily energy and magnetism, and entails on society a needless habit."

These extracts are quoted by the editor of *Brain and Brawn* (Los Angeles, November), who goes on to make the following comments upon them:

"Undoubtedly the bathing habit, like many other good habits, may be, and is, overdone. Especially is this true of protracted ocean baths. Whole baths in cold water should be taken only by those who have a good circulation. To go shivering into the water, and come out shivering, pretending you like it, is as foolish as it is to eat 'sawdust' food, thinking it is going to do you good, altho you don't like it. In such cases it is much better to wade and paddle around in the water.

"The English are fanatics for cold baths in the morning. Some of them break the ice in the Serpentine Lake in Hyde Park all through the winter. I remember there was often ice on the water in my father's hip-bath, which he took religiously in his bedroom every morning. We had no bathrooms in those days. Such a practise is harmful, tending rather to shorten than to lengthen life. The shock is too great, except to those who are exceedingly hardy within and without, having hardened themselves inside by a strictly temperate, non-stimulating dietary and outside by exposure to the air. Otherwise, it is best, in the morning, to take a rub with a damp towel, followed by friction with bath-gloves and the hands.

"When the day is hot, and the river, or lake, or ocean looks good to you, then is the time for you to plunge in for a short dip or a swim.

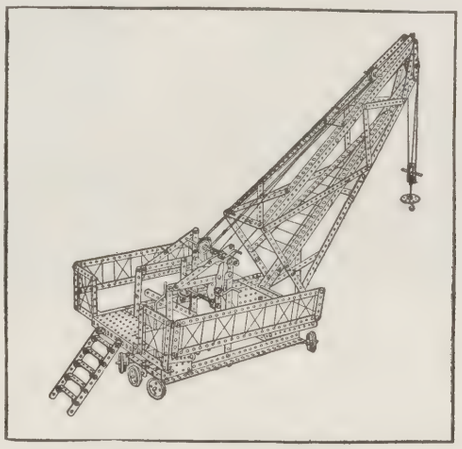
"Some nations are strong and healthy that scarcely ever bathe the whole body, while the Japanese, who boil themselves daily, have exceptional strength and endurance. One objection to the hot bath would be overcome if people would make a practise of always oiling the body thoroughly after the bath.

This has been the practise in the Orient for thousands of years. In the West it has been altogether too much neglected.

"As to a bathtub in the homes, if you have to choose between the two, better omit the stove."

DENATURED SUGAR

FEW REALIZE the extent of the industrial uses of sugar, entirely apart from its employment as a food. Such uses are increasing yearly. Sugar is used in this way in Europe more than it is in this country. The French Government imposes a revenue tax on sugar and glucose as food-products, which makes the price of sugar about 12 cents per pound; but by a law similar to that which applies to alcohol in this country, "denatured" sugar—that is, sugar to which some substance has been added to make it unfit for food—is exempt from taxation. As in alcohol denaturizing, the substance added is, if possible, some ingredient in the special process using the sugar. Says *Merck's Report* (New York, November):



A DERRICK BUILT OF TOY STRUCTURAL STEEL.

"In France, an excellent quality of sugar . . . sells, when denatured, at a price equivalent to from 3 to 4 cents a pound, or about what the refiners pay here for raw sugar. This is lower than starch, glucose, or dextrin sells in Europe.

"It may be of interest to note some of the more important applications of this denatured sugar, bearing in mind that in this country, at present market conditions, molasses and starch products are more economical substitutes in some cases. . . . . .

"Sugar is a common ingredient of many compounds for removing and preventing boiler-scale. As these usually contain alkali, this is used as a denaturant. The shoe-blacking industry uses sugar and molasses to considerable extent. In Europe there seems to be a tendency to use blackings of this older type as less injurious to leather than the newer wax blackings, owing to the solvents used in the latter. These shoe-blackings are made by the carbonizing action of sulfuric acid on the sugar. The product is neutralized, and other ingredients added, such as powdered bone-black, oil, ink, and sometimes glycerin.

"Perhaps one of the industries of greatest present importance, both here and in France, is the manufacture of transparent soap. Originally, the English soaps were made by the costly process of dissolving the soap in alcohol, decanting the soap solution, and recovering the alcohol by distillation. Later, glycerin was used as a solvent, but this made the soap too sticky, so that it soiled the wrappers. The sugar soaps do not have this disadvantage. Hence, many tons of sugar are now used by soap manufacturers in this country as well as in Europe.

"There are over thirty patents for explosives in which sugar is a component to the extent of from 6 to 40 per cent. This use of sugar has been so important in Germany that a special provision is made by that country for denaturizing sugar used in explosives, paraffin or similar oil being used.

"In the color and dyeing industries we find sugar used as a reducing agent in indigo and chrome work, as a base for the manufacture of organic chromium salts, and as a vehicle or 'filler' for solid aniline colors, giving them an attractive appearance. In many cases this latter practise is carried to somewhat questionable lengths, as some of these dyes contain over 90 per cent. of sugar."

Tanneries, too, use sugar in "filling" leather, and, to some extent, in removing lime from hides in the "dehairing" process. This solvent action of sugar on lime and the easy recovery of the sugar by carbonation have suggested its use in other cases where an excess of lime must be removed from phosphates, zinc, or magnesium oxides, and the like. To quote further:

"Tannin extracts are also 'filled' with sugar, as they are on this side of the water with glucose. Sugar is also used in several chrome-tanning processes as a reducer, and, as in dyeing, for making acetates and formates.

"Ordinary copying-ink is made by the addition of one part of sugar to three parts of writing-ink. Printer's rollers and hectograph pads are made from glue combined with sugar or molasses. The silvering of glass mirrors is another important industry in Europe. Sugar, after inversion with acids, is here used to reduce an ammoniacal solution of silver nitrate, which deposits a coating of silver on the glass immersed in the solution.

"The hardening and strengthening action of sugar in mortar was known to the ancients in the Far East, and it is said that the Romans also made use of saccharin solutions for this purpose, altho sugar, known as 'Indian salt,' was rarely seen in the Empire. Some of this ancient masonry containing sugar still stands in good condition.

"In recent times, the Museum of Natural History in Berlin has been rebuilt with mortar consisting of one part of lime, one part of sand, and two parts of sugar. Sugar is also used for hardening plaster molds.

"In many chemical operations, sugar is used as a source of carbon of high purity, such as in the manufacture of pure carbon monoxid or sulfurous acid. As to future application it is possible that sugar may become of great industrial importance through its nitro-compounds. Nitro-saccharose (sucrose octonitrate) is a product analogous to gun-cotton, which, it is said, can replace the latter in its numerous applications in explosives, collodion, celluloid, and the like. Similarly, it is claimed, sucrose acetate can take the place of the corresponding cellulose compound in viscous and artificial silk.

"Certain compounds of sugar and benzoic acid also show promise in this direction.

"This list of industrial applications of sugar is by no means exhaustive, but perhaps suffices to illustrate the great diversity of manufactures in which this product appears."

ELECTRIC PERILS OF THE BATHROOM—A man is in much greater danger from electric shock when taking a bath than under ordinary conditions, as the surface of the body, when moist, offers much less resistance to the current than when dry. Persons have been killed, while bathing, by currents that would scarcely have affected them outside the bath. Says *Cosmos* (Paris, October 30):

"Balthazard has recently told, at the Society of Legal Medicine, of the case of a lady killed by electric shock in her bathroom, at the moment when she was pressing the button of an electric bell, between the poles of which there was a difference of potential of not more than 110 volts.

"In ordinary circumstances, owing to the great resistance of the human body, such a small electromotive force presents no great danger; but when the circuit contains, as in the case reported, a large surface of moist skin, the resistance falls and more than 100 milliamperes may pass through the organism, sufficient, at this tension, to produce death by tetanization of the respiratory muscles.

"Currents of even 46 volts are dangerous in a bathroom. It should be remembered that currents of feeble intensity can produce a sudden rise of arterial tension capable of causing sudden death in a person with a weak heart.

"High tensions, enabling currents of 4 to 5 amperes to pass, have quite a different effect. They do not generally cause death, because the modifications of the tissue produced at the point of contact at once oppose a considerable resistance to the passage of the current. The intensity within the organism is not sufficient to cause tetanization of the respiratory muscles and the lesions are, usually, purely local.

"Socquet has also observed a case of electrocution with an electromotive force much lower than 110 volts. There was no burn at the point where the current entered, but at the autopsy the lungs showed the characteristic lesions of asphyxia and even actual laceration."—*Translation made for* THE LITERARY DIGEST.

GIRLS SET FREE BY THE "EURHYTHMIC" METHOD.

"Like young women who had tript into the dreary atmosphere of a motor-screeching civilization from some fairy wood."

RHYTHM TO RESTORE MENTAL POISE

IF IT BE TRUE, as people of foreign climes often assert, that this is the most nerve-shattering country in the family of civilized nations, the gospel of Jaques-Dalcroze should be one for us. Neurasthenia, this innovator asserts, "is often nothing else than intellectual confusion produced by the inability of the nervous system to obtain from the muscular system regular obedience to the order from the brain." The cure is a reestablishment of "rhythmic order," and the end and aim of his system of "Eurhythmics" is to accomplish this. Three weeks ago we published a brief article on this subject, but we return to it the more readily because Mr. Philip Gibbs, in treating it in the London *Graphic*, points out its even wider application. Eurhythmics he defines as "mental training to secure perfect self-control so that the body obeys the dictates of the brain." This is obtained with the aid of music, and its efficacy is such that "all ugliness, even moral perversion itself," which is a violation of rhythmic order, is expected to yield to the stimulus. Mr. Jaques-Dalcroze is at present in London giving public demonstrations of his exercises, and Mr. Gibbs presents in *The Graphic* his impressions of what goes forward:

"To describe the exercises of those Swiss and German girls who came on to the stage of the King's Hall, with bare legs and arms, like young women who had tript into the dreary atmosphere of a motor-screeching civilization from some fairy wood in the spring-time of the world, would not convey to any reader's mind the extraordinary effect of joyfulness produced by them on the audience, or explain the meaning of this new method of physical training. They marched and leapt and frisked about the stage. They beat out strange and complicated rhythms with their bare feet. They conducted choruses not only with the white wand—wielded as no ordinary conductor has ever handled his baton, with a queer magic in it—but also with their whole bodies, which seemed inspired by the music, so that they became, as it were, the incarnate spirit of a fugue by Bach or of a melody by Chopin. They did, with the most exquisite ease, things which seemed incredibly difficult to the human brain and body, such as beating different times with different parts of their bodies simultaneously. They improvised rhythms of their own by an intricate code of physical movements, and while one girl danced her way about the stage, another girl, seated at the piano and watching her, realized the silent melody of this physical rhythm, and then translated it upon the piano, so that the pattering feet and the pattering notes, the swaying of the dancer's body, the ecstasy of her arms, dictated the tune which had never been played before. Mr. Jaques-Dalcroze himself, a master musician, improvised many different rhythmic pieces on the piano, and after listening, with a childlike attention, to the first few bars, the girls 'realized' it, and, spontaneously, with a kind of awakened consciousness inspired by the instincts of their subconsciousness, danced a rhythmical dream, as tho hypnotized. It was dancing, yet unlike any dancing that we have seen before. It was an ecstasy in rhythm. It seemed as spontaneous as when children jump for joy. It revealed in its highest form the mystery and the magic of rhythm."

The mystery of this new system was revealed to Mr. Jaques-Dalcroze in a very simple way. He discovered that his students of music were able to sing more accurately if they were allowed to beat time with their own hands. He saw, therefore, "an intimate relation between physical gesture and musical consciousness." So he invented a number of gesture-songs. Then he turned his attention to rhythm itself, "realizing that it is the basis not only of all music, but of all art, and indeed of life itself." Music, however, is the one art that "most perfectly expresses every variety of rhythm, and which has the most intimate effect upon the physical sensations and spiritual emotions." Hence:

"By a series of physical movements and gestures which 'realize' rhythm, the pupils are led on to a stage when their subconsciousness is stored, as it were, with rhythmic melody and images, so that at last they gain a joyous liberty of physical expression and are able to express not only the greatest masterpiece of music as translated through their own emotions, but also in rhythmical dances to express all that is highest and most beautiful in their own individuality. The whole object, indeed, of Eurhythmics is to draw out the individuality of the pupils, to make them realize themselves, and to enable them to express their own emotions in a rhythmic way. 'It is a fact,' says M. Jaques-Dalcroze, 'that very young children taught by my method invent quite naturally physical rhythms such as would have occurred to very few professional musicians, and that my

most advanced pupils find monotonous many contemporary works, the rhythmic poverty of which shocks neither public nor critics.'

"It is only recently that the meaning of rhythm has been realized, tho it has been dimly perceived throughout all the ages. It is the ordered movement that runs, as it were, through all beauty. It is to be found in the wind that chases sunlight and shadows across the fields, in the ebb and flow of the sea, in the revolution of the planets, in the sweeping lines of mountains and valleys, in the windings of rivers, in the heart-throbs of humanity, in all artistic expression, in the order of life itself. It has been most clearly revealed in music, which by rhythm may stir the highest emotions of men and women. Rhythm and vibration in music are the basis of life. Where there is rhythm there is order, and where rhythm is lacking there is no order. M. Jaques-Dalcroze feels confident that a time will come when music will be applied in the broader general sense to education, physical as well as mental. He is working along this principle, and his system of Eurhythmics, which has many thousands of students in Germany, Scandinavia, Russia, Switzerland, England, and elsewhere, is likely to revolutionize all methods of physical and mental culture. It is a training in the joyous liberty of the body and brain, governed by the deepest laws of beauty."

FUTURISM AND VAUDEVILLE

THOSE AT A LOSS in trying to "place" Futurism in its relation to other arts will be relieved to have this done for them by the leader of the movement. He allies it with the music-hall show, or vaudeville, as we call it, only he would have the music-hall manager try for even more daring effects by taking liberties with the audience, as outlined in some detail below. England takes her variety theater with a seriousness that is little short of awful. It is only recently that the King and Queen paid their second visit to an amusement house of that ilk, and now all newspaperdom, led by the Bishop of Kensington and Mr. Bernard Shaw, is discussing the morals of music-hall shows. It is natural that *The Daily Mail* should go them all one better by securing Signor Marinetti, the leader of the Futurist movement, to interpret the modern music-hall "as seen through his own remarkable temperament." Mindful, no doubt, that the same syndicate owns and controls the London *Times*, this journal accepts "no responsibility for this effusion, which is sure to interest both those who understand it and those who do not." Signor Marinetti begins by expressing the profound disgust felt by all Futurists for the contemporary stage, "because it stupidly fluctuates between historic reconstruction (pastiche or plagiarism) and a minute, wearying, photographic reproduction of actuality." But they delight, he says, in the music-hall because there, as in the smoking-concert, circus, cabaret, and night club, is offered "the only theatrical entertainment worthy of the true Futurist spirit." Why?

JAQUES-DALCROZE AND HIS PUPILS.

"It is a fact," he says, "that very young children, taught by my method, invent quite naturally physical rhythms such as would have occurred to very few professional musicians."

"Futurism exalts the variety theater because, born as it were with us, it fortunately has no tradition, no masters, no dogmas, and subsists on the moment. The variety theater is absolutely practical because it aims at entertaining and amusing the public by performances either comic or startling to the imagination. The authors, actors, and mechanics of the variety theater exist and conquer their difficulties only for one purpose, that of everlastingly startling by new inventions. Hence the absolute impossibility of stagnation or repetition, the desperate emulation of brain and muscle to beat all previous records in agility, speed, strength, complexity, and grace.

"The variety theater offering the most lucrative medium for endless inventive effort most naturally produces what I call the *Futuristic Wonder*, a product of modern mechanism. It presents caricature in its fullest form, foolery of the deepest kind, impalpable and delicious irony, absorbing and decisive symbols, torrents of irrepressible hilarity, profound analogies between human beings and the animal, the vegetable and the mechanical world; swift revelations of cynicism, a network of spritely wit, puns, and cock-and-bull stories which pleasantly fan the intellect; all the scales of laughter to relax the nerves; all the scales of such fun, foolery, doltishness, absurdity as insensibly urge the soul to the very edge of madness; all the new meanings of light, sound, noise, and speech and their mysterious, inexplicable correspondence with the most unexplored centers of our sensibility.

"The modern variety theater is the overflowing melting-pot of all those elements which are combining to prepare our new sensibility. It lends itself to the ironical decomposition of all our worn-out prototypes—the beautiful, the great, the solemn, the religious, the fierce, the seductive, the terrible; and also to the abstract forecasting of those new prototypes which shall succeed them.

"The variety theater is the only kind of theater where the public does not remain static and stupidly passive, but participates noisily in the action, singing, beating time with the orchestra, giving force to the actor's words by unexpected tags and queer improvised dialogs.

"In that it brutally strips woman of all her veils, of the romantic phrases, sighs, and sobs which mask and deform her. On the other hand, it shows up all the most admirable animal qualities of woman, her powers of attack and of seduction, of treachery, and of resistance. The variety theater is a school for heroism by reason of its various record difficulties to be beaten and record efforts to be surpassed, which produce on its stage a strong and healthy atmosphere of danger (looping the loop on a bicycle, in a motor-car, or on horseback). The variety theater is the only school to be recommended to adolescents and young people of promise, because it explains in the swiftest and most striking manner the most mysterious sentimental problems of life and the most complicated political events. In fact, the variety theater explains and most luminously illustrates the dominating laws of life:

"The interpenetration of separate rhythms.

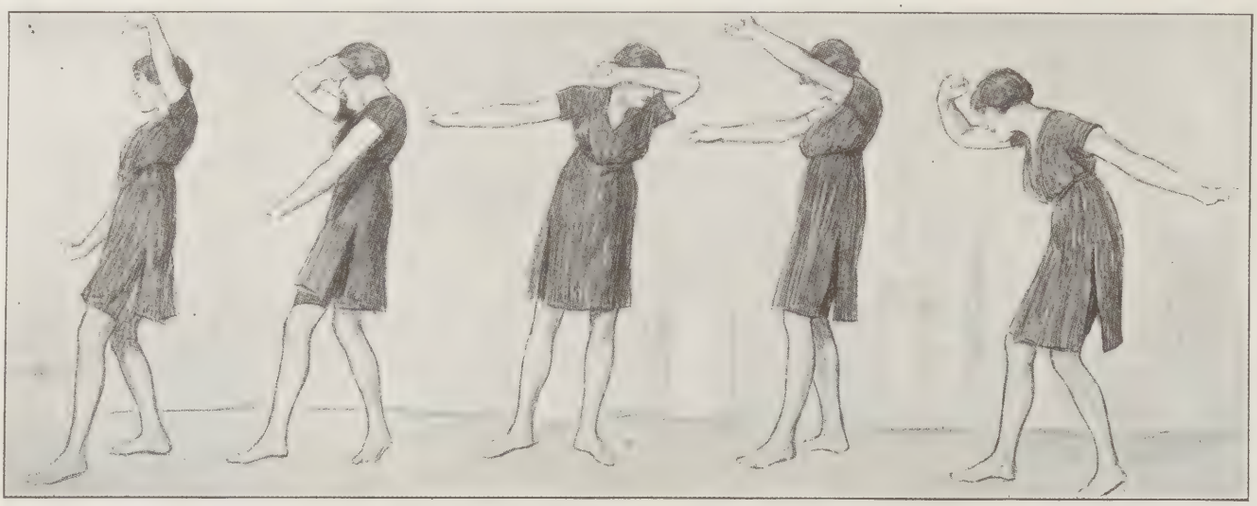
"The inevitable nature of lying and contradiction.

"The synthetic combination of speed with transformation.

"The variety theater is, of course, antiacademical, primitive, and ingenuous, and therefore all the more significant by reason of the unforeseen nature of all its fumbling efforts. . . . The variety theater destroys all that is solemn, sacred, earnest, and pure in Art—with a big A. It collaborates with Futurism in the destruction of the immortal masterpieces by plagiarizing them, parodying them, and by retailing them without style, apparatus, or pity."

His suggestions for perfecting the music-hall along Futurist lines are a trifle startling:

"It is absolutely necessary to abolish every vestige of logic



IN DIFFERENT WAYS THEY REALIZE THEMSELVES.

They are some of Jaques-Dalcroze's pupils, drawn by Balliol Salmon to show the varying results of music on different temperaments.

in the performances of the variety theater; to exaggerate luxury; multiply contrasts, and give the supreme place on the stage to the improbable and the absurd . . . green hair, violet arms, blue neck, orange chignons, etc.). Futurism wants to abolish those Parisian revues whose *compère* and *commère* merely replace the chorus of the Greek tragedy. Out upon logic and consecutive idea!

"To introduce surprize and some necessity for action in the audience, I hazard a few random suggestions: To smear gum on a stall so that its occupant may be stuck to his seat and excite general hilarity. Naturally the evening coat or dress would be paid for by the management. To sell the same place to ten different persons; obstructions, discussions, and quarrels will necessarily follow. To offer free seats to ladies and gentlemen who are notoriously cracked, irritable, or eccentric—calculated to provoke immense rows by bizarre or objectionable behavior.

"To debauch systematically all classical art, producing, for instance, in one single evening all the Greek, French, and Italian tragedies in abridged form. To enliven the works of Beethoven, Wagner, Bach, Bellini, Chopin, by cutting into them with Neapolitan songs. To soap carefully the planks of the stage so that the actors may slip up at the most tragic moments.

"To encourage in every way the genus of the American eccentric, all his mechanical grotesque effects, his coarse imagination, his immense brutality, his surprize waistcoats and his baggy trousers, deep as a ship's hold, from which will be brought out, with a thousand other cargoes, the great Futurist hilarity which shall rejuvenate the face of the earth."

THE GREED OF CONCERT AUDIENCES

THE AMERICAN CONCERT PUBLIC seem frequently to resolve themselves into a prodigious *Oliver Twist* in their demands for "more." Often the request begins its utterance before the performer has even had a chance to finish his program. Then there is the odd exhibition of frenzied women who rush to the edge of the concert platform and demand still more of a distinguished pianist, for example, quite ignoring his exhausting two hours or more, as the case may be. Mr. Josef Hofmann recently taught a Philadelphia audience a lesson. After his "very beautiful performance" of a Schumann concerto with the Philadelphia Orchestra at an afternoon concert the applause, we are told, lasted fourteen minutes. The same demonstration stretched to sixteen minutes in the evening, but Mr. Hofmann played no encore at either. The result was grumbling, to which the pianist responds in a letter to *The Public Ledger:*

"First of all, I would like your readers to know that I did not treat the Philadelphia public in any sense in an exceptional manner. It has been a fixt principle with me for many years not to play an encore in any orchestra concert. The reasons for this are two, and they have been accepted and indorsed by the most prominent musicians and all the leaders of symphony concerts throughout the world. One of these reasons is that the piano as an instrument, in comparison with the orchestra, is but a monochrome. The orchestra, speaking figuratively, is an oil-painting. If we listen from the beginning of a performance to the piano alone our ear becomes attuned to this sort of musical expression, and we do not miss the absolute colors which only an orchestra can produce. A piano alone, however, after we have enjoyed all the splendor of colors and the endless volume of a big orchestra's sonority (or the combination of piano and orchestra, which even increases the possibilities) can not give us any satisfaction whatever, and we can not get back to the monochrome-like qualities of a piano and obtain an artistic and satisfying result. Such an attempt always brings an anti-climax from a musician's point of view.

"This is one reason. But there is another, and a more important one. A symphony concert consists of a carefully studied musical unity. One piece must harmoniously fit with the others. One composition must be chosen with regard to the one before it and the one that follows it. The conductor who makes up a program not only seeks for the instinctive harmony of each work that he selects, but he also tries to bring one composition into harmony with all the others on his program. Any strange element, therefore, accidentally inserted, such as an encore, between the harmoniously arranged compositions necessarily causes a dissonance and upsets the artistic proportions. Being a sincere admirer of art, and therefore of proportions, I am always anxious to eliminate every personal element, such as a desire for personal success, when I play with an orchestra in a symphonic concert, and do my best to help the artistic cause of the concert as a whole.

"I assure you that these were the reasons that actuated my refusal to give an encore, and I regret that I was the cause of the delay in the performances through the misunderstanding between the public and myself."

The Public Ledger sustains Mr. Hofmann's position and adds a rebuke to the applauders, who caused "a great many persons who went to the Academy to hear music, and not to listen to hand-clapping, stamping, and whistling," to be defrauded, for in many instances they had trains to catch or engagements to keep. It adds:

"In Mr. Hofmann's case it was not for a moment a question of unwillingness to play. His recital programs have always given proof of his unstinted generosity when he was the sole artist and the piano the only instrument. His courageous defense of his own ethical standards as a thoughtful and sincere musician raises the whole issue of the propriety of destroying the integrity of the thoughtful arrangement of a symphony program.

"Those who approve of the maintenance of the highest standards and ideals in musical art must admit the validity of the arguments which he advances."

RELIGION AND SOCIAL SERVICE

A PANTOMIME OF THE NATIVITY

THE FIRST REPRESENTATION of the Nativity to be given in five centuries, probably, was performed last year at Pomfret, Connecticut. With the same spontaneous impulse, says Ella M. Boult, as religious ceremonial in early England developed into the miracle-play, so these scenes took form in the little New England town. Furthermore, "even as the Passion Play has become a part of Oberammergau, so the Pantomime of the Nativity has become a fixt and solemn feast at Pomfret." In scene after scene, with music or spoken word accompanying the action, the little drama of Christ's birth was presented. It was a formidable setting, declares the writer in *Country Life in America*: "a New England village of most unyielding traditions, complicated—not tempered—with every sort of modern cosmopolitan influence." "Nothing could be more out of the ordinary than the enactment of these holy mysteries of Bethlehem in any modern American village." This is the tale of what was done:

Pictures by Ella M. Boult and Beatrice Stevens.

THE MANGER IN PANTOMIME.

The Christmas story has become an annual observance at Pomfret, Conn., as the Passion Play at Oberammergau is given decennially. In both cases the actors are drawn from the local community, whose devout spirit no art could teach.

"Two months earlier our Neighborhood Association had been organized, and had already proved itself responsive to every call upon it. We had not believed that its varying elements would make common cause so readily. It had developed a surprizing unity of interests, and a sympathetic and hearty cooperation in developing those interests. And now Christmas was approaching, supreme season of festival and celebration. What should we do to commemorate it—we, whose very foundation-stone was brotherhood, community of interests, fellowship, good will?

"Back of us were three church societies: the Congregational, sentinel and saint of every New England village; the Episcopal, always proudly assured in its sense of power; and the far-reaching, never-flagging Roman Catholic. All three are generous in their response to the material demands of Christmas, as they are devout in spiritual ministrations at this and all seasons of the year. From all three, and from without the church, we draw our membership. Not only are we of many creeds, but of many vocations, and especially of many nations. Our Irish and Swedish membership equals our native Puritan element; we have a number of English and Scotch members, and a few Swiss, Italian, Portuguese, Canadians, and negroes.

"As to vocation we are largely working people, and are of all trades—domestic workers, day-laborers, carpenters and builders, preachers, teachers, painters, plumbers, merchants, farmers. It is true that in our community we have a large number of the leisure class, so called. Who shall say that they are not the busiest of all classes? Certainly from them we draw a sympathetic and helpful portion of our membership."

The festival, it was seen, must reach all and represent all. "It must be joyous, comforting, uplifting":

"Above everything else it must be expressive of the great event that it commemorates. Throughout the ages Christmas has never weakened in its tremendous significance. Bells ring, candles glow, greetings and gifts and good cheer abound; but always, below these surface manifestations, there is the Manger at Bethlehem, the transfigured Mother, the pondering Joseph, the dumb brutes, the night, the stars, the shepherds keeping watch over their flocks by night, the glory of the Lord, the heavenly hosts, the miracle of miracles. Our impulse was toward the wonderful reality. We did not approach the undertaking without trepidation. With material so heterogeneous, could we maintain the solemnity of our subject, sacred in itself and wrapt round with centuries of mystical beauty?

"Our shepherds were boys from the farms; our angelic hosts were made up of girls in their teens; our wise men were, one a Frenchman, one a Moor, and one a native of New England stock; by trade they were a plumber, a day-laborer, and the village storekeeper and postmaster; the retinues of the *Magi* were schoolboys, as full of life and spirit and mischief as the average boy; *Joseph* was an Italian laborer, *Mary* a young Irish girl. The only representative of the brute world was *Laddie*, our beautiful collie, typical of the shepherd's calling. *Laddie* had had no more dramatic training than the others, but his instinct proved, like theirs, perfect. When, a few months later, he died, he was mourned far and wide as the 'dog that came with the shepherds to see the Babe in the manger.'

"The event proved that faith in our people, however great, was still less than their due. Nothing more beautiful came of our miracle-play than the devout spirit of our young actors. It seemed to our Italian workman an astounding thing that he should take the rôle of *San Giuseppe*, but no art could have taught

All nations, classes, and trades are represented on a basis of equality in the Pomfret pantomime of "The Nativity."

him the profound gravity that he assumed. It came from within, from the solemn realization of the verities. There is sometimes in human nature a certain simplicity that responds like the heart of a child to the elemental without. This quality, nurtured beyond any doubt by country life, has shown itself more and more to be characteristic of our people.

"When the curtain fell upon the last scene of our little drama there was silence—a silence of deep emotion. The lights came on with an incongruous glare, thrusting us with a rude jolt forward into the twentieth century. They disclosed an audience unable to speak. The 'Silent Night' melody that still filled the air resolved itself again into words in an effort to make articulate the spell that kept us dumb. Haydn, even in his greatest masterpieces, never surpassed this theme in its elemental, pastoral quality, so touchingly eloquent of the open country, the starlight, the rudeness and homeliness of the stable, the peace, the calm, the vastness of the event. It is not without significance that it was this hymn which opened the services about the first great public Christmas-tree in Madison Square, New York, last December."

A TEMPERANCE LESSON FROM EUROPE

WITH LIQUOR-DRINKING in disfavor in high places, and its sale widely forbidden, this country is nevertheless consuming more liquor per capita every year, while in Europe, where "everybody drinks," the consumption of intoxicants is decreasing. At least, one eminent temperance worker, Dr. Wilbur F. Crafts, believes such to be the case. He calls it "the riddle of reformers the world over," that "countries with little or no prohibition are decisively reducing the national per capita consumption of liquors, while the United States, with more prohibition than any other country, has never succeeded in accomplishing such reduction in the nation as a whole, except temporarily in years of financial depression." Here are some of the facts, as Dr. Crafts cites them in *The Continent* (Chicago):

"I got directly from the German Government in Berlin official figures showing that the per capita consumption of beer in Germany steadily decreased from 125.1 liters (about 1½ quarts to the liter) in 1900 to 98.6 in 1910. An unusual summer sent this consumption thermometer up to 106.4 in 1911, but it was still 19 liters below the figures of 1900. The consumption of distilled liquors also decreased, but in less marked degree. *Germany still consumes nearly twice as much beer per capita as the United States, and twice as much per capita of stronger liquor—a conclusive answer to those who argue that free use of beer will displace whisky.*

"The fact to be faced is that Germany, with no prohibition and no temperance lesson laws, is steadily reducing the per capita consumption of liquors by out-of-school temperance education and organization; that is, by an organized abstinence movement led by university professors and the Emperor, and by labor leaders. An authoritative statement of the Emperor's near-abstinence is that 'the Emperor takes alcohol only as far as the duties of representation require.' The first known abstainer in Germany heroically took the pledge so recently as 1893 in the face of universal ridicule, and now there is a third of a million not only pledged but organized in local lodges of Good Templars and other societies, to whose ranks 100,000 were added last year.

"Bulgaria, with no prohibition, has only one-eighth as large a per capita consumption as Germany and only one-fourth as large as ours, in part because of the temperance literature circulated by a missionary, Rev. J. F. Clarke, but more because of the moral influence for abstinence of Mohammedan scruples.

"In Holland, with no help from legislation, there has been a per capita reduction directly due to an abstinence movement distinctly Christian, led by the minority of abstaining preachers.

"In Great Britain there has been a reduction of consumption with not even a local-option law, until recently for Scotland only. But every third child is enlisted early in abstaining juvenile temperance societies.

"Norway, with only a little 'dry' territory as yet, has reduced the consumption and consequences of drink, not by the now discredited 'Norwegian system' of so-called 'disinterested management' with its 4 per cent. dividends and good salaries and big subsidies, but by local option in part and chiefly by the organization of every tenth person in total-abstinence armies. In Sweden there is reduced consumption also with little aid from law as yet. Of the Socialist members of Parliament eighty-four are total abstainers and workers for prohibition. Of the total 350 members of Parliament 153 are avowed and aggressive abstainers."

So, remarks Dr. Crafts, "dry land" is in sight "as far away as Scandinavia," and he adds:

"The only thing that might prevent the early enactment of prohibition there is the amazing failure of Americans to reduce our per capita consumption of liquors and the non-enforcement of 'dry' laws, which partly explains it; and the still more fundamental reason for it, that we have grossly neglected educational temperance work in public schools and even in Sunday-schools, and most of all out of school, and have not given due effort to the enlistment and organization of abstainers."

We have done much in this country. "We have reduced the per capita consumption of liquors by local and larger prohibition in the mostly rural 'dry' areas"; but, we are told, "because the big cities were manifestly beyond the reach of prohibition we have seldom even tried to pledge individuals there and organize them to help each other in the good old way, with the result that the city facilities for drinking have been increased rather than restricted, and the increase in consumption of liquors in the cities has more than offset the decrease in more

rural territory." What we need, says Dr. Crafts, "is not less legislation, but more education." As he thinks,

"There are good reasons to believe the prohibition cause would be much further ahead in the Old World but for the big question mark that many sheriffs and judges of Maine have put into the legislation there. Prohibition for foreign lands is at this hour being delayed by every true report of non-enforcement in American 'dry' territory, and most of all by our failure to reduce per capita consumption, for which preachers and teachers and Christian parents who have not promoted organized abstinence must share the blame.

"The world-wide injury done by our neglect to elect faithful executives and promote personal abstinence will become tragic in its effect on other lands if there is not a marked change for the better before the fifteenth international congress on alcoholism brings here in 1915 a host of antialcohol experts who will take pains to see for themselves just what we are doing and are not doing."

MILLIONS FOR CHRISTIAN ASSOCIATIONS

FOUR MILLIONS might not seem too large a sum for New York to devote to the Christian welfare of its young men and women. The upshot of its two weeks' campaign proved the surmise a fact. Philadelphia had raised $1,000,000 by the "whirlwind" methods advocated by Mr. Charles S. Ward, and other places had given in their proportions. Besides, the whirlwind collector was again "on the job" and had 1,000 assistants to spread the appeal. The two weeks found the sum short by a few hundred thousands, but twenty-four hours' grace completed and exceeded the goal by over $52,000. No contribution was regarded as too small, tho some were looked upon, perhaps humorously, as too large. From a penny to $500,000 was asked. Above the latter sum it was thought not wise to go so as not to spoil the fun of campaigning. Mr. John D. Rockefeller stands alone as the giver of the maximum, but the second largest giver is Mrs. Willard D. Straight, who contributed $300,000. The impression that the entire amount was raised in fifteen days, however, needs some slight correction. It was a year ago that the efforts began. At that time five women—Miss Grace Dodge, Mrs. Finley Shepard, Mrs. Willard D. Straight, Mrs. Clarence Hyde, and Mrs. John French—contributed $800,000 for the National Board Building and the site on which it stands. This building, at Lexington Avenue and Fifty-second Street, is completed and in working order. Most of the remaining $4,000,000 will be apportioned to building purposes for the two associations, the women's branch getting three-fourths of the fund. The distribution is as follows:

YOUNG WOMEN'S ASSOCIATION

Central building	$600,000
Harlem building	500,000
Boarding home	350,000
Central Club for Nurses	400,000
West Side Branch	50,000
Building for Colored Women's Branch	100,000
Current expenses (two years)	150,000
Equipment and adjustment	50,000
National board building	800,000
Total	$3,000,000

YOUNG MEN'S ASSOCIATION

Bowery branch	$390,000
Union branch	360,000
Colored Men's branch	150,000
Williamsbridge branch	40,000
Intercollegiate branch	20,000
Contingent and adjustment fund	40,000
Total	$1,000,000

Mr. George W. Perkins, chairman of the Executive Committee, was interviewed during the course of the campaign, and sought to correct any notion that the buildings were to be places where girls could "hang round and loaf." "They are to help girls who want to help themselves." *The Sun*, which publishes his interview, quotes him further:

"It is a mistake to think that the buildings will be charitable or philanthropic institutions when they are to be made as nearly self-supporting as possible. This money will be expended on eight or nine handsome buildings, and will form a number of centers in different parts of the city that are convenient.

"There will be one building for the colored women's branch, which will afford up-to-date advantages for physical, social, educational, and religious work. There will be another building on the East Side above Twenty-third Street where young women who are strangers in the city can live and study their various professions; and still another in Harlem for a similar purpose. Then there will be several boarding-houses for girls who are studying stenography and the practical sides of business life. Then there will be one building for trained nurses in some convenient center where they can secure rooms and board at reasonable rates while they are practising their profession.

"Some of the money will be used to meet the expenses of these various undertakings as they become more and more self-supporting, while other portions of the money will be used to equip the buildings of the associations and adjust increases over estimates in other items of the budget.

"There have been comments that the campaign for this fund

SOME BIG GIVERS TO THE Y. W. C. A. AND Y. M. C. A. FUND.

will hinder other campaigns for similar purposes. I think this is a mistake, too. I believe that the more people give the more they will want to give. In this direction our campaign has been an educational one in that it has shown that people can give, and also has shown them how to give; and I believe that when once aroused they will give even more than they would have given otherwise in other and similar campaigns."

Mr. Perkins also seeks to refute the charge that New York is merely a community of dollar-chasers. Thus:

"The criticism was launched on us that we lacked spirituality; that we lived in 'lobster palaces,' looked on Wall Street as our happy hunting-ground, and regarded our churches chiefly as centers of fashion.

"Any one who had served as I did, as Executive Committee Chairman of the Y. W. C. A.-Y. M. C. A. whirlwind campaign, must have come to the conclusion that those who criticized New York in the former ways were wrong. In the two weeks during which we raised the $4,000,000 plus, which has been obtained for the two Christian Associations, I saw thousands of instances of deep feeling and wide liberality on the part of New Yorkers. Case after case came to my attention in which dwellers in this city in all walks of life proved their ability to give unselfish devotion to a great purpose. I had occasion to note the broad generosity of women like Miss Grace H. Dodge, Mrs. Willard D. Straight, Mrs. Finley J. Shepard, and others whose gifts to the fund ran into six figures.

"I also learned of many self-supporting women and small-salaried men who doubtless deprived themselves of comforts to aid the cause. There were wives of wealthy men who drew big checks payable to the Joint Campaign Committee. There were women in moderate circumstances who gave their time as well as their money to active work in obtaining subscriptions. There were shop-girls and factory workers who subscribed for dollars, dimes, and even nickels.

"The fact is that the big Christian Association campaign resulted in the awakening of the city to what it owed to its young womanhood and young manhood. It was a practical, profitable, human revival—a glowing contrast to the old-fashioned revivals which consisted largely of ardor and bore little fruit of achievement. The gigantic uplift movement for the young women and young men of the city leads to the conviction that when broad-gage, two-fisted, substantial philanthropy is needed, the place to seek it is our own good old generous New York."

A single instance of the self-devotion Mr. Perkins speaks of is given by the New York *Times* concerning the colored people. They have "worked like Trojans, bringing in each day $2,000 or $3,000 which they had collected in small sums." We read:

"Mrs. Ransome, the president of the women's branch, is the wife of a colored Baptist minister and a wonderful speaker herself. When the campaign first started several conferences were held at the homes of prominent women, and Mrs. Ransome was one of those who told of the needs of the different phases of the work.

"One afternoon one of the officers of the association, while listening to Mrs. Ransome, noticed that the drawing-room door was cautiously opened a crack and remained ajar till the end of the conference. After it was over the surprize of the women in charge was great when the old colored butler came up and deferentially asked for a pledge blank. It was given to him. When he handed it back they almost doubted their eyes when they read the amount on it. The old butler had subscribed $1,000. They appealed to the mistress of the house. Did she suppose he had so much money as that? Ought they to take it, even if he had it to give?

"'Yes,' said his employer, 'he probably has it. He has been in our family thirty years, and he has saved his money. If he wants to give that amount for the benefit of his own people, let him do it. It is a great thing for them and for him.'"

PLANNING BIBLE READINGS FOR SCHOOLS—Christian educators have been looking for a way to retain the benefits derived from Bible reading in the public schools and yet meet the objections raised hitherto by Catholics, Jews, Protestants, and free-thinkers. These objections, in some cases based upon the use of certain versions of the Scriptures or the reading of certain passages, have in various localities been so strongly supported as to bring about the prohibition of Bible reading in the public schools. It is now being urged by a moral and social commission in Washington, and by agencies in some churches, so *The Christian Intelligencer* (Ref., New York) informs us, "that leaders in all religious bodies in this country get together and agree upon a series of readings, so that States compelling Bible readings in public schools may have the best possible series, and States not permitting or requiring them may consent to do so." One Australian plan is particularly recommended for use in this country. Says *The Christian Intelligencer:*

"This plan, in its first part, consists of Bible selections for all five mornings of every week throughout the year taken wholly from the Old Testament. They are of such character that Catholics, Jews, and Protestants approve. Moreover, they are selections that appeal to the heroic in young people, and that are of special value as literature. There are passages from early poet prophets, stories about heroic men who went about doing good. What wise men of old said about riches and industry, and stories of songs and of shepherds. . . . The Australian plan puts into effect addresses by teachers on Bible characters like Job, Isaiah, David, and Solomon of the same character as are given in public schools upon Shakespeare, Browning, Washington, and Lincoln."

REVIEWS OF NEW BOOKS

SOME OF THE HOLIDAY BOOKS

Blacker, J. F. The A B C of Collecting Old Continental Pottery. Pp. 315. Philadelphia: George W. Jacobs & Co.

Without pretending to be a complete history of old continental pottery, or a full and entire description of the various wares included in that category, this book will be useful to those who need it, and may suggest a fresh field to the collector or to the man who requires a hobby. It deals with ceramic productions of several peoples through a considerable space of time: France, Germany, Sweden, Denmark, Switzerland, Holland, Italy, Persia, and Spain, giving as far as possible the characteristics of the pottery peculiar to different cities, the names and inventions of men identified with the "Fabrique," and records specimens of their best productions. We read of the three different kinds of "Glazing" and the highly interesting account of the combination of metallic substances with the various results obtained in color, durability, and beauty. If this is only the "A B C" of collecting, an amateur will not be tempted to learn the whole alphabet, but he can not fail to be interested in this clear and comprehensive explanation of the subject. The author describes the historical foundation of the several types, the introduction of improvements, and gives an account of the great men connected with each change. Then he gives an exhaustive list of all the private signature marks for the various wares. Many illustrations aid materially in helping the reader to appreciate the artistic development in ceramic art.

Dickens, Charles. The Old Curiosity Shop. With 21 Full-page Color Plates by Frank Reynolds, R.I. Pp. 359. London and New York: Hodder & Stoughton (George H. Doran Co.). Price $5.

As our children enter the fields of romance lying beyond Mother Goose rimes, and discover a world of books, strange and wonderful, how important it is that the illustrations of those books should not belie and belittle the ideals the child gathers from the printed pages. Who has not had the disappointment of looking for the beloved hero's picture only to find that he falls far below the description? It is with satisfaction, therefore, that one turns to the beautiful new holiday edition of Charles Dickens's "Old Curiosity Shop," illustrated in soft, lovely colors by Frank Reynolds. People who have long known and loved *Little Nell* and her pathetic grandfather will enjoy seeing them as Reynolds gives them to us. The frontispiece of the grandfather standing in the midst of fantastic carvings and suits of mail, with a rich background of dim and faded colors, is the key-note to the type of work Reynolds has done throughout.

We see the picture of *Little Nell*, so innocent and pretty, with the patient, waiting look upon her face, and her little hand clasped in that of the grandfather; that little hand which ever led him on through all their wanderings. Then we see the figure of *Quilp*, the little slavey, the poor Marchioness, and, farther along, the jolly red face of portly *Mrs. Jarley*. Who has not made a mental picture of *Mrs. Jarley*? Whoever has must admit that Mr. Reynolds's picture is *Mrs. Jarley* to the life. In these illustrations we see all the wild and grotesque companions who surrounded *Little Nell*. The volume itself is beautifully printed and bound, and is altogether such a book as a new acquaintance or an old friend of Dickens might well be proud to receive as a gift.

Filon, Augustus. Memoirs of the Prince Imperial (1856-1879). 8vo, pp. 248. New York: Little, Brown & Co. $4 net.

There is something melancholy in reading the life of a Prince Imperial when the Empire to which he belonged and to whose crown he would have succeeded has vanished into the realm of ancient history. Yet Mr. Filon has invested with a very living interest this record of a life which began with such promise and ended under such pathetic circumstances in Africa, where he was fighting with the army of England, under whose traditions he had been educated at Woolwich. Prince Napoleon was a man, as he had been a boy, of many talents, and his tutor in this richly illustrated biography gives us a vivid account of his charming personality and brilliant mind. The multitude of illustrations bring before our eyes a clear account of the contemporary celebrities among whom he lived and by whom he was trained. A better account of the inside world of the French Empire under Napoleon III. can not be found, excepting by turning over an immense amount of historic literature in the shape of letters and individual memoirs. The illustrations altho profuse are always to the point. They cover fifty-three pages and are mostly photographic reproductions.

Gastine, L. Madame Tallien. Translated from the French by G. Lewis May. 8vo, pp. 348. New York: John Lane Co. $3.50.

The story of the French Revolution, when "the old order changed, giving place to new," has no brighter figure in those who played their various parts on the bloody stage than Madame Tallien. We say brighter, because brightness rather than more solid qualities was the order of the day among the ladies, married or mistresses, who thronged the drawing-rooms of Barras in the Luxembourg when he was apparently the central power of the Directory. The guillotine was doing its deadly work. The heads of Fabre d'Eglantine, Camille Desmoulins, Danton, and Hébert had already by the year 1794 fallen into its basket. After the Ninth Thermidor people who had been cowed and driven into "living like brute beasts as a sort of voluntary debasement drew breath once more." The tyrant was crusht and died a horrible death and people were eagerly inquiring in Paris, "Who is this Tallien that dared to brave the Jacobin leader? Who is the woman that armed him with a dagger to strike a blow for the freedom of France?" The answer that was given them was Theresia Tallien, and that legend is still repeated, altho it is one of the objects of M. Gastine's work to disprove it.

Theresia was the daughter of a famous banker of the Spanish Court, the wealthy Francisco Cabarrus. Her incomparable beauty had early made her famous. In 1788, when she was fourteen or fifteen years old, she was married to Fontenay, a young counselor in the parliament of Louis XVI. But the name of her admirers was legion and she numbered among them Lameth, Le Pelletier, De Condorcet, and other young nobles who were reveling in philosophical dreams of a new political Utopia. In 1793 she paid for her vagaries by being divorced from Fontenay. She retired to live with her relations at Bordeaux, but for some crime or folly was cast into prison, where she was eventually condemned to the guillotine. But Tallien, the revolutionary leader, came to Bordeaux and when he saw her in her cell "he fell in love with her and won her freedom and her heart." Those who wish to follow further the career of this gifted and beautiful but unprincipled woman, whose name is not to be found in ordinary encyclopedias, should read the present sparkling and eloquent book. The portraits are exceptionally good, but perhaps the best idea of a lady who was so eminent as a social figure will be found in the following passage, quoted by Mr. Gastine from the writings of a contemporary of *la belle* Tallien, styled "Notre Dame de Thermidor." She was then living at the Luxembourg as the mistress of the brutal Barras:

"The center of attraction at Barras's establishment and at his fêtes was Madame Tallien. I have alluded to this celebrated woman in several of my works, but I do not think that any of my descriptions of her convey an adequate impression of what she really was. Her beauty, of which the sculptures of antiquity give us but an incomplete idea, had a charm not met with in the types of Greece and Rome. She was a Spaniard, and those distinguishing characteristics which belong to the young women of Cadiz were possest by her in perfection. Her hands, her arms, her teeth, all were admirable. Her smile betokened wit and delicacy of perception (qualities which were hers in no small degree), and gave such animation to her countenance that people who beheld her for the first time often gave vent to an involuntary cry of admiration.

"Her wit was at once quick and good-natured, and people who talked with her were sorry when the conversation had to be brought to a close. She possest both tact and judgment. Her acts of kindness, tho not carelessly indiscriminate, covered a wide field, and rarely did she reject an appeal for help when it was in her power to bestow it. Kindness of heart lends an additional charm to the beauty of beautiful woman. She pleased more than other women because of her goodness of heart. How often have I not remarked on this with regard to Madame Récamier.

"Madame Tallien was extremely elegant. She set, she ordained the fashion, and this was unfortunate because it frequently happened that an adornment quite suited to her bewitching features was thoroughly unbecoming to other people. She had taken to wearing a sort of semi-Grecian costume that became her admirably. It was plain, almost severe, and she wore it

FILING Macey APPLIANCES

S-T-A-K-U-P-S

Macey metal S-T-A-K-U-P-S include every known modern filing device.

They are light, strong and serviceable.

They may be rearranged or expanded without limit.

For horizontal expansion one leg only is used at the intersection of the two cabinets, which not only locks them firmly together, but improves their appearance.

There is no office requirement that this line will not fill.

Send for our catalog No. 6213, and we will give you the name of our dealer in your town.

with consummate grace. It quite disposed of the idea that a pretty woman is made prettier by adornment."

Gooding, Paul. Picturesque New Zealand. With Illustrations from Photographs and Maps. Large 8vo, pp. 348 Boston and New York: Houghton Mifflin Co. $3.50 net.

The main purpose of this book, the author tells us, is to offer the public an intimate picture of New Zealand and its people. It is a descriptive panorama of Maoriland written with a picturesque pen in an interesting way by a keen observer. Only brief reference is made to the industrial and sociological problems of the Dominion, but Macaulay's pet figure is by no means neglected, for, besides numerous references throughout the volume, an entire chapter is devoted to the Maoris and their "King," the great Mahuta. This interesting race is fast passing away; the Maori is being superseded—absorbed by the pakehas. Hear the lament of Chief Te Huki: "We have Maori features, true, but our skins are pakeha. The tide has turned, and is slowly but surely flowing out into oblivion. When the tide turns again it will be pakeha." So the white man's advancing civilization is repeating in New Zealand the work it has done so effectively with the American Indian in the United States.

As is well known, New Zealand owes its commercial position in the world to-day to its wool, the export of which yields about one-third of the total value of all exports. The industrial life of the Dominion depends upon its sheep. The desirable immigrant, however, finds conditions favorable to him. No longer does "dog-in-the-manger" landlordism prevail, and opportunity to become a landowner is afforded at a fair price and on easy terms, and the State will advance the settler the funds to develop his land on a long-time stipulation at a low rate of interest. The private wealth per capita of the country is about $1,800. Speaking generally, there is no pauperism, for the Dominion is a far more prosperous land than most older countries. Nor are there slums as slums are known in the great cities of the northern hemisphere. This book, carefully printed as it is, embellished with numerous illustrations, and containing a copious index, lacks one feature—a concise glossary of the many Maori terms used by its author, for the meanings of these are not yet so well known as to warrant the omission.

Housman, Laurence. Princess Badura. A Tale Retold from the "Arabian Nights." With Ten Full-page Color Plates by Edmund Dulac. Pp. 113. London and New York: Hodder & Stoughton (George H. Doran Co.). Price $3.

Far back in the days of our youth, probably every one of us burned the midnight oil to peruse the "Arabian Nights," and one of the favorite tales was "Princess Badura." In the new holiday edition containing this story retold by Laurence Housman and illustrated by Edmund Dulac, we revel again in all the joys and mysterious sorrows of that ill-fated princess. Told in simple words which children may easily understand, clothed in large and beautiful print, and illustrated by gorgeous imaginative pictures of the Orient, it is a gift which will open a new field of romance to the child who receives the book on Christmas morning. How could any King of China, in the days of fairies and genii, look a bit different from the picture illustrating the *King* and *Badura*? Any child would recognize him at once. The meeting of *Camaralzaman* and *Badura* is shown us in a delicately colored illustration, which, however, looks a bit more Japanese than Chinese in character. Mr. Dulac excels most, perhaps, in his purely imaginative pictures. The meeting in the air of *Dahnash* and *Meymooneh*, the two genii, is pictured in somber, mysterious colorings with sweeping lines. All the richness of the Orient is shown in the final marriage procession. The picture of the elephant looming monstrous against the dark sky, clothed in rainbow trappings, with the beauteous princess reclining in the howdah while shouting subjects march beside, is a fitting close to such a tale, and lingers long in the memory in all its gorgeousness. The treatment of an individual story from the "Arabian Nights" opens a new field to publishers of children's books. This will be especially appreciated by younger children, to whom the full volumes of the "Arabian Nights" are too prolix for enjoyment.

Lodge, Henry Cabot. Early Memories. 8vo, pp. 362. New York: Charles Scribner's Sons. $2.50.

There is nothing quite so delightful to read as the autobiography of a distinguished man—and especially of a man who has passed through the vicissitudes of so interesting a period in our history as the later decades of the nineteenth century. We love to take a stroll with Rousseau, we love the sparkling gossip of Horace Walpole, we are captivated by the naïveté and wit of Pepys, sometimes we dip with joy into the letters of Jerome, the Confessions of Augustine, or the musings of Marcus Aurelius. If we prefer to live in the atmosphere of modern life in its widest and most cosmopolitan sense, we are wise in turning to the "Early Memories" of Mr. Lodge, one of the sweetest and frankest of self-revelations that can be found in modern literature. It is nice to see that the author has put on his title-page a motto from Catullus, but we are unreasonable enough to desiderate a few illustrations of places and portraits, for, as Horace and Herodotus agree, the eye is more easily instructed than the ear or the sense of reading printed matter. To speak of the historic value of this review of Senator Lodge's account of himself we can only say that such an autobiographical sketch is a valuable contribution to the history of Harvard, of the Civil War, and the Spanish-American history of this continent. The book is equipped with an excellent index.

Mannix, William Francis, edited by. Memoirs of Li Hung Chang. With an Introduction by Hon. John W. Foster. 8vo, pp. 288. Boston and New York: The Houghton Mifflin Co. $3 net.

Since China emerged from her medieval stagnation and became a modern power there has arisen no brighter and more sagacious representation of her statesmanship than the subject of this memoir or diary of Li Hung Chang.

For the volume before us simply consists of a record of events from day to day set down during a most interesting and critical period in the history of China. In these jottings we find that the great statesman combined many striking qualities in a unique degree. He reveals himself as a distinguished man of letters and a poet. As a soldier he cooperated with Gordon, whom he revered, in putting down the Taiping Rebellion. After becoming viceroy of the capital province of Chi Li (1870–

1885), he reorganized the army on a European footing. He it was who precipitated the fatal war between China and Japan, but he almost retrieved the effects of the defeat by his ability as a diplomat in checking the European encroachments on Chinese rights and liberties.

The diary makes good reading. It is piquant and candid, and the Oriental tinge and occasional naïveté of the style are interesting. It is, in fact, the confessions of a great minister who could hold his own with the keenest diplomats of Europe. It is principally taken up with Li Hung Chang's work as viceroy for the Empress Dowager and as Ambassador to the United States. It is thus very valuable as a contribution to historical *origines*, besides being highly interesting for its religious, philosophical, and political disquisitions, which are at once vigorous, clear, and outspoken.

Martindale, Thomas. Hunting in the Upper Yukon. Pp. 320. Illustrated. Philadelphia: George W. Jacobs & Co. $2 net.

The experiences of Mr. Martindale in his 400-mile hunting trip from Skagway through the untraveled regions of the Upper Yukon make an interesting narrative. His description of the outfit necessary, the wonderful scenery—mountains, rivers, and the slowly dying glaciers—and the hardy and courageous people who make their home in the territory he hunted over, is very good reading for the man who, by force of circumstances, is compelled to stay at home. The denizens of the wild—moose, caribou, grizzly, and the bighorn sheep—are gradually being driven farther and farther into the wilderness for safety, and becoming each year more difficult to approach. They are "on to" the power of the modern rifle, and consequently very shy. Not the least interesting part of the book is the story of the mule "Billie," who, altho given a very bad character at the outset by those familiar with his various eccentricities, proved under the kind treatment of Mr. Martindale a very docile and tractable traveling companion, carrying his master throughout the entire trip with scarcely a kick. The photographic illustrations are very good; but why, oh, why, Mr. Martindale, did you ascribe to Burns the verse on page 94, which is not in any of the poet's published writings?

Ricci, Eliza. Old Italian Lace. Philadelphia: J. B. Lippincott Co. 2 vols. $30 net.

The patriotic writer of this magnificent work scouts at the outset the idea that any other nation can claim priority in the production of lace. To Italy it belongs, and even Italy, according to Miss Ricci's researches, did not awake to the charm of the new fabric until the end of the fifteenth century. Those who love to find the roots of all arts and industries in remote antiquity may try to assign an earlier date and produce their evidence from the mummy-cloths of Egyptian pyramids, but they find no sympathy in the author of "Old Italian Lace." One fact alone seems to cause even her some disquieting doubts. The rapid flowering of the art of lace-making so soon after its first invention, so that Venice, its home, had to pass sumptuary laws to curb the extravagance of its would-be possessors, seems to point to some anterior history. But the records of time bring no disclosures. Having settled

Have a taste of spring-time now.

for her countrymen the honors of discovering a new incitement to feminine envy, the writer turns to the elaboration of her subject. Before the use of washable materials for feminine dress, one should not naturally look for ornamentation of the character of lace. Gold and silver trimmings prevailed on the heavy woven fabrics, but their unsuitability—for the wash-tub as well as their lack of harmony with the new materials resorted to—made the transition easy to a decorative material at one with the garment. Some of the earliest traceable evidences of lace are to be found in the pictures of the late fifteenth century, usually enhancing the beauty of the bed-linen, dedicated to the use of the Virgin. This, together with the following interesting discovery of folk custom, indicates that its first uses were devoted to religion. That it has continued to have at least a pious association is shown in the information gathered by the writer from the withered lips of old peasants in the Romagna and the Marches. They say that well within their memories, in every house however humble and in every lofty palace were found three articles specially treasured: they were three pieces of linen taken from the old family chest only on the day of weeping round a corpse; the sheet and pillow-case used when the dead body lay in state, and the little cloth which covered the table for extreme unction. It is because they were laid aside as things too precious, save for the last solemn rites, that three sorts of linen articles are found in the best repair at the present day: sheets, their seams hidden with narrow insertion in ivory stitch, bobbin-lace, or reticello, and enriched with wider laces top and bottom; pillow-slips entirely covered with embroidery and reticello, sometimes enhanced with a motto or sacred symbols; and cloths in the form of towels, even richer in needlework and lace.

It would be a fascinating pursuit to go through the extent of these two large volumes and review the author's examination of the varieties of "point," and the specialties of product of Venice, of Genoa, of Milan, and of the Abruzzi. There is plenty of analysis, historical research, and pictorial illustration in her presentation of the subject. Of the latter it would be difficult to give an adequate idea without enumerating the reproductions of specimens as well as of old portraits where the clothes of the sitter display the most elaborate enhancement by lace. It is evidence of the immense fascination the new material had for the painters of the day that they worked so lovingly over the details of the pattern, thus making their work valuable as historic documents. Any who peruse these volumes will forget their possible disdain for feminine fripperies in their interest in the rise and development of a beautiful art.

Thackeray, William Makepeace. Vanity Fair. With Twenty Large Color Plates by Lewis Baumer. Pp. 483. London and New York: Hodder & Stoughton (George H. Doran Co.). Price $5.

It takes a bold artist to illustrate "Vanity Fair," for Thackeray probably had his characters pretty clearly imagined as he wrote it, and gave us precisely his idea of them in his own drawings. So any deviation from them must be a departure from the author's conception. Mr. Baumer seems to have frankly recognized this fact in his fine paintings illustrating the chief character of the volume before us, and has been content to glorify the *Becky* of Thackeray. She is the same slight figure with the crafty, serpentine smile, only lifted from line-drawing to oils. To "smile and smile and be a villain" was *Becky's* character in a sentence, and she smiles wickedly through the book, from cover to cover. *George* and *Amelia* are presented as handsomely as any one could ask, and her beauty makes his faithlessness more than ever a puzzle. But *Jos Sedley*—what a falling-off is there! *Jos* has grown thinner. He is still a portly figure, but not so stout as to be comical, as Thackeray unquestionably intended. *Rawdon Crawley* is changed, too, but as the change makes him even more of a mutton-head than before, it is more to the life. The keen *Becky* and the stupid *Rawdon* make a fine contrast. This brings us to *Lord Steyne*. Thackeray made him a fat villain; Baumer makes him a thin one. Ordinarily, each would have a right to his own opinion, but the novelist wrote: "A short man was his lordship, broad-chested and bow-legged, but proud of the fineness of his foot and ankle." Here he appears fully of average height, a little spare, if anything, and with legs as straight as ramrods. But these are minor points. The volume and its pictures form a handsome production that will grace any library and give new attraction to one of the greatest novels of our language.

Tyndale, Walter, R.I. An Artist in Italy. With Twenty-six Full-page Color Plates by the Author. Pp. 307. London and New York: Hodder & Stoughton (George H. Doran Co.). Price $5.

Italy is the paradise of the artist, and those who have been there, or are planning to go are fortunate in having so many books full of its glories to recall its scenes or prepare us for them. There can never be too many such volumes; the peninsula seems inexhaustible. The stay-at-homes can almost tour Italy in an easy chair with a few of them at the elbow. Then, too, many lack the true artist's eye, and can look at the most splendid scene in Italy without "seeing" it in the artistic sense. To them such a collection of paintings as we have here is an invaluable preparation, and none of us, perhaps, is too blind or too perfect artistically not to get much out of it. Mr. Tyndale's book covers Venice and the hill towns of Tuscany. The colorings are often exquisite. "The Salute from the Giudecca" is a rich piece of work, and "A Stall at the Rialto, Venice," is a thing of beauty. The view of "San Gimignano" of Val d'Elsa is well worth framing, and, in fact, the entire series would make a delightful set for the library wall of any lover of the "land of beauty and sunshine and song." As a gift book to a friend who has Italy in prospect or retrospect this handsome volume is ideal.

Vallois, Grace M. First Steps in Collecting. Pp. 315. Philadelphia and London: J. B. Lippincott Co. $1.50.

This author characterizes her own work as "not learned, but chatty," "an attempt to entice the reader toward more robust efforts, when more technical and advanced books will be sought for with ardor." It is divided into three parts, all well illustrated —Part I, How to Collect Old Furniture; Part II, How to Collect Old Pottery and Glass; Part III, Eighteenth-century Tea-

Here is a REAL Christmas Gift for You and Yours

A First Payment of Only $5.00 Required

You Can Own 2 Fine Building Lots IN NEW YORK CITY

YOUR MONEY will be SAFE

Situated in the Heart of the Best Residential Borough

Property Fully Improved—No Assessments

SAFETY FIRST—*and always*

When the bond market sags, when water oozes out of stocks and their value comes tumbling down, DOWN, **DOWN**—remember what Andrew Carnegie says: "Land will not burn up, it cannot be stolen or carried away. It is always permanent and staple. Wise is the man who makes his investment in good land."

The owner of good land—and New York City land is the best in the world—*bought at a low price*, has something more than a beautifully engraved certificate to show. *He has his land.* It will not melt away in the night. His equity is always there. He can *see* what he owns. Best of all, his profits are advancing all the time. New York City real estate never recedes in value.

John Jacob Astor left a fortune of over $100,000,000, most of it made in New York real estate. The Astors bought in the city suburbs—and held their purchases. Increasing population did the rest. The population is increasing today as never before. It must be housed! Land values are accordingly rising, and must mount still higher. *Your* opportunity is as favorable as was the Astors'. ***Buy in Westerleigh and hold on!***

A TYPICAL WESTERLEIGH HOME

Residence of B. F. FUNK, Vice-President of Funk & Wagnalls Company, Publishers.

BIG PROFITS IN SIGHT

The New York *Times* of November 16 predicts: "Great industrial future for Staten Island"] Westerleigh is in the best section], "Shipping terminal plans along the West Shore," "Marginal railroad plans submitted," "Big theater project" under way, "Factories" and many more improvements proposed. ***NOW*** is the time to buy—on the eve of a permanent boom—before prices jump upward. Out of the original 1600 plots in Westerleigh, all have been sold but thirty, *and these are first-class in every respect.* Indeed, these 30 lots would not be offered now except on account of death of former purchasers, or other uncontrollable circumstances. A former officer of the National Prohibition Park Company is the latest purchaser, having just invested many thousands of dollars. With keen foresight he sees a wonderful future at hand and desires to reap the benefit. Why not share it with him? This estate must be closed up. The number of lots unsold is so small that no extended advertising campaign will be made—the expense would be too great. This, therefore, may be your last chance. **ACT!**

IDEAL LIVING CONDITIONS

When you buy plots in Westerleigh you do not buy land in a wilderness or under water, but in a healthy and congenial community of comfortable homes in the most picturesque borough of the great city of New York.

Fully 80% of the residents own their own homes.

Edwin Markham, the Poet
Florence Morse Kingsley, the Novelist
M. P. Mosely, Pres. and Editor N. Y. Commercial
Justice Charles E. Hughes
Ex-Governor John P. St. John
Hon. E. S. Rawson

are some of the prominent people who have bought or live here.

If you want an investment for small capital—your money and profits are safe and sure here. If you are a homeseeker, buy a plot or two and build in Westerleigh. Good health, good friends, and a warm welcome await you.

Whether you live in the neighborhood of New York or far distant from it, this is an ideal investment. In fact, many plots have been sold to lawyers, physicians, clergymen and other professional and business men located throughout the United States.

Now—On the Eve of a Tremendous Boom—

BUY at THESE SMALL PRICES
AND EASY TERMS

Two Lots at Price of One

These plots are forty feet wide—nearly twice the width of the average city lot—practically two lots for the price of one.

4 Plots at $ 700	2 Plots at $1200
6 Plots at 800	3 Plots at 1400
3 Plots at 900	3 Plots at 1500
2 Plots at 1000	2 Plots at 1600
2 Plots at 1100	3 Plots at 1700

Actually worth $200 to $300 more *at the present moment*

Small Monthly Payments

If you want the best selection, send $5.00 at once as first payment and I shall allot best choice of unsold plots in order received. Future payments will be $1.00 per month for each $100 the lot costs, payable first of each month, commencing January 1, 1914. That is, if you wish a $1000 plot, mail $5.00 at once, and $10.00 a month thereafter, commencing January 1, 1914; if you wish a $900 plot, monthly payments will be $9.00, and other plots in same proportion.

Life Insurance Free

If you should die, after making six monthly payments, and are not over fifty years old at the time of purchase, the plot will be deeded to your estate without any additional payments being required.

This Property in Close Touch With the Business District

Only 40 minutes from the great New York banking district, Wall Street, Stock Exchange, etc., by municipal express ferry service—the fastest and best in the world. When the **tunnel is completed** it will bring this district within 15 minutes of this section. Most of the residents (about 1,500) have their business in Manhattan. Westerleigh is, in fact, closer to the business centre than much of the residential section of Brooklyn, the Bronx, and the upper part of Manhattan.

All improvements are on the property, so that there are no improvement assessments; 300 residences already built and many more building; Public School (cost over $100,000) and Churches, Clubs, Building-Loan and Savings Building; well-paved streets, including fifteen miles of granolithic sidewalk, curb and gutter; ample sewers and water mains; gas and electric lighting. A splendid trolley car service.

Wonderful Activity in Real Estate in Westerleigh

Many lots are changing hands and contracts being given out for building homes for those who have selected Westerleigh to live in. This is a great chance for an investment in a rapidly growing part of New York City, and it is because of the fact that an estate must be settled quickly that the few remaining plots are being offered now at low prices. There is no longer any question in regard to the future of Staten Island—the rush of home-seekers to the Borough, the subway—now assured—the millions being spent for improvements by the City, remove all question as to whether real estate investments will pay.

A Real Holiday Present

Every one should put some money in good real estate. It is the safest of all investments. The chances of getting New York City plots at prices of lots in inland towns will very soon be a thing of the past.

Remember—Only 30 Lots Left—So you should Hurry

This Will Help Provide for Old Age

Your Investment is Safe and in the Years to Come it will greatly Increase in Value

Send your order at once with $5 (you may wire your order at our expense and send first payment by mail), giving the priced lot you wish, and the President and Secretary will select the best of the unsold plots of this special offer. FIRST COME, BEST SELECTION.

Dig. 12-13-13

SATISFACTION GUARANTEED—That is, if you are not satisfied with the selection for any reason, you may at any time exchange your plot for any other unsold lot on an equitable basis.

REVIEWS OF NEW BOOKS

(*Continued from page* 1182)

tables and Contents of Lumber Rooms. The facts are all here, and we may learn if we will; indeed we are forced, willy-nilly, to become familiar with "Chelsea China," "Salt Glaze Pottery," with "Heppelwhite," "Sheraton," "Chippendale," and other conjuring names of the collector. In tracing the changes and improvements in the development of furniture and pottery manufacture, we are really tracing the development of the human race, for every mark of progress in the article fashioned has an analogous and corresponding mark of advancement in the race itself. The book possesses much interesting information, some stimulating suggestions, and may be used as constant reference by the would-be or ambitious collector of any manifestations of the progress of our ancestors in furniture and pottery creations.

Vincent, Leon H. Dandies and Men of Letters. 8vo, pp. 314. Boston and New York: Houghton Mifflin Co. $3.

The dandy is a man who bestows fastidious care on his dress and general deportment. A genuine dandy is, of course, as rare as a genuine poet or musician, and, as Mr. Vincent well says with regard to dress, the most conspicuous feature in the equipment of a dandy:

"Even with taste and money and a faultless figure the problem is not fully solved; one must be willing to give time to it, as a painter must be willing to put time on a picture. The moralist may hold that it is a waste of time for an immortal soul to consider overmuch the cut of a coat, as he may hold that piano-playing is frivolous. But, no; there must be a few good piano-players in each generation, as there ought also to be a few able exponents of the art of dress. A world of Thalbergs and Brummels would be intolerable. But there is no danger of our ever seeing such a world."

It is in the spirit of these words that this bright and witty writer interprets the character and describes the sayings and doing of such men as Brummel, D'Orsay, Byron, Rogers, Moore, Beckford, Bulwer-Lytton, and Henry Crabb Robinson. Those who have read Mr. Vincent's contributions to *The Atlantic Monthly* will know what to expect in this delightful volume, where fineness of style is united with delicacy of perception and a broad spirit of sympathetic and human criticism which is really worthy of Thackeray, whose dash of mordant cynicism it is, however, entirely free from.

Wedgwood, Josiah C., M.P. and C.C. Staffordshire Pottery and Its History. Pp. 229. New York: McBride, Nast & Co. 1913. $3.25 net.

It is easy to study the history of pottery, because it is a specialized industry closely confined to and associated with North Staffordshire. The history of the district is the history of pottery and of the inhabitants' whole lives; besides, no one could be better equipped to give an accurate account of the different steps in the development of this industry than the grandson of Josiah Wedgwood, "The Prince of Potters." The industry was first practised as a branch of housekeeping, and the first reference to potteries is made in the last half of the eighteenth century. The author traces the early beginnings,

shows how North Staffordshire was an ideal location, because it combined the three requisites—clay, firewood, and finally transportation facilities—and describes Burslem, which was the original trade center. Naturally, the book is full of technical terms, statistics, names, and pages of pedigree, showing how families intermarried and partnerships were established. It also records the improvement and inventions that attended the growth of the industry. 1690 is given as the date of the first salt-glazed stoneware, and in 1750 was discovered the value of two firings. Josiah Wedgwood himself, who died in 1795, had a unique influence on the development of pottery, and is the only one of whom it may truly be said that the whole subsequent course of pottery manufacture has been influenced by his individuality, skill, and taste, due to his constant experiments. The "Blue Printed" superseded all other earthenware from 1790, and made the fortunes of the Spodes, Adamses, Bournes, Mintons, and Ridgways. Then come a bewildering number of glazes, the development of porcelain, and the various mixtures and combinations that have produced present results. The effect of steam power and union strikes on the pottery industry is explained carefully, and how, gradually, sanitary laws and Home Office interference have raised the health conditions and abolished abuses, the credit for such improvements being given to William Owen, the Duchess of Sutherland, and Sir Charles Dilke. In spite of the mass of technical data, names, and statistics, the book is interesting to any reader, and, to the student, should be invaluable.

Winter, Nevin O. Poland of To-day and Yesterday. Pp. 349. Illustrated. Index and map. Boston: L. C. Page & Co. $3.

This book is a sympathetic study of the history of Poland and its people past and present. The Poles were among the first of the Slav people to set up a government in Europe, and for several centuries this proud nation acted as the warder of Europe against the barbarous hordes of the East, in 1683, under Sobieski, defeating the Turks with great slaughter and saving Europe from being overrun by Kara Mustapha. This battle marked the high-water mark of Poland as a nation, and slowly but surely the life of the unhappy country was sapped by the selfishness and internal strife of the nobles, until on May 3, 1815, in spite of the gallant efforts of that prince of patriots, Kosciusko, the Congress of Vienna made the dismemberment complete. Despite the fact that the country is under the heel of the despot, and that the people are officially forbidden to use their native tongue, "Poland has become the symbol of freedom. Everywhere in Europe that there has been fighting for freedom, Poles have taken a part in it. . . . The conquerors have not succeeded in crushing this spirit. . . . The hope of independence at some time in the future is as strong in the Polish breast as that of another Zion among the scattered Israelites." Among the illustrious names recorded on the tablets of the world's history are many Poles. Copernicus, founder of modern astronomy; Kosciusko, the patriot *par excellence;* Chopin and

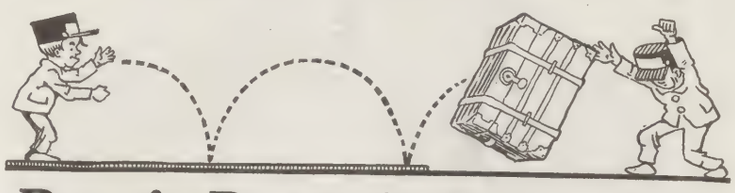
A Merry Christmas gift of "Likly" Luggage will bring many Happy New Years of Travel



Bam! Bump! C-r-r-rash!

Baggage men waste no time. Slam! goes your luggage. Every jolt hits a vital part—a corner or a side.

All "Likly" Luggage is made for rough-and-tumble service. Into each piece is put 69 years of experience.

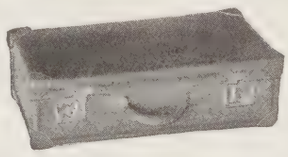
When the great Christmas problem stares you in the face, why not visit the nearest "Likly" dealer? He will give you a wide range of useful suggestions from moderate-priced articles up to some very luxurious ones.

Only a few months ago we brought out the "Country Club Bag" shown above. It is the most winning youngster we ever put out. It will brighten the shadow under any Christmas tree.

We make the "Country Club" of prime-stock imported pigskin. This we emboss with a walrus grain—an exclusive finish. There's an English concealed lock. Methuselah might spend two lifetimes trying to pull the handle loose.

Like all "Likly" Hand Luggage, this bag comes with a tag which guarantees it for FIVE YEARS. The 18-inch size costs $15. The 20-inch is $16.50.

Then there's a wealthy brother to this bag. Same size, frame, workmanship and interior. But the leather is genuine Caraboa stock from the East Indies. It is the toughest hide any creature wears. We are its exclusive importers. If you want a luggage aristocrat of interminable wear, ask your dealer for the "Likly Country Club Bag" of *Caraboa*. 18-inch size, $25.00; 20-inch, $27.50.



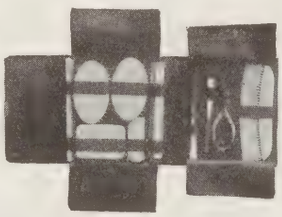
When it comes right down to hard knocks, few bags are more durable than a good old "Likly" Suit Case. The imported foundation board we use is of a jute composition. It bends but never breaks. We believe in *double* locks. See them above. And "Likly" Suit Cases have basswood reenforcing in the ends. This insures everlasting shapeliness.

All "Likly" Regular and Fitted Suit Cases are guaranteed for FIVE YEARS. Our catalog describes 67 models, ranging from $1.25 to $125.00.

Here's a toss-me-about, what-do-I-care sort of a bag that will serve almost a lifetime. It is a "Likly" Kit Bag. Developed from one of the happiest thoughts an English Army officer ever had.

This model is made of cow-hide—the *genuine* kind. If cow-hide luggage could talk, lots of it would say "M-a-a-aa!" instead of "Moo-oo-o!", for it is frequently sheepskin dressed up. The leather in this bag is the finest "Moo-oo" kind.

All "Likly" Kit Bags are guaranteed for FIVE YEARS. 9 models. Prices $15.00 to $37.50.



"Likly" Dressing Rolls keep your handkerchiefs from being pasted to your soap—and your tooth powder out of your hair brush.

They are made of imported leathers only. Black seal-grain goatskin and genuine seal figure largely.

Most of the fittings come from Paris. The Ladies' cases are lined with leather or silk. Men's models come unlined or lined with leather.

If you want to see Her tickled through and through *give* Her one for Christmas.

We make 36 models. Prices from $5.00 to $40.00. Write us for Special "Likly" Dressing Roll booklet. See them at your dealers.

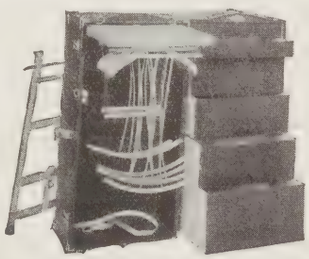
All the comforts of home are found in a "Likly" Fitted Bag.

Your toilet articles are there at your fingertips. Each one is snugly held in its proper place.

Into these bags we put the handsomest leathers, the finest workmanship, the most secure locks and metal parts. The toilet sets furnished are of highest quality. The lining is luxurious.

A "Likly" Fitted Bag is as far above common luggage as a Pullman chair is above a day-coach seat.

Our catalog shows 23 models. $17.50 to $105.00.



The wise old dealer will deliver a "Likly" Wardrobe to your house *very secretly*. He knows that you want to keep your Christmas gifts a mystery until the Big Morning.

Thousands of users of "Likly" Wardrobe Trunks will tell you that they combine the conveniences of the dressing room with the strength of a pirate's chest. You *hang* your clothes in. They stay flat in travel. They gather no wrinkles. Every "Likly" Wardrobe is built over a tough basswood foundation and armored at the corners with special "Likly" hardware.

We make 100 different models of wardrobe trunks. All are described in our catalog which will be sent [you on request. Prices $25.00 to $107.50.

This brass trademark is found on all genuine "Likly" Luggage.

Send for the "Likly" catalog. Its 128 large pages describe the widest and most durable line of luggage made to-day.

Henry Likly & Co., Rochester, N. Y.

"LIKLY" LUGGAGE

Asks no favors of the baggage man

REVIEWS OF NEW BOOKS

(*Continued from page* 1185)

Paderewski in music; Modjeska, the actress, and Sienkiewicz in literature, all come from that proud tho unhappy people.

Whiting, Lillian. Athens the Violet-Crowned. Illustrated from photographs. 8vo, pp. xii-361. Boston: Little, Brown & Co. $2.50 net.

Hichens, Robert. The Near East—Dalmatia, Greece, and Constantinople. Illustrated by Jules Guérin and with photographs. Royal 8vo, pp. x–268. New York: The Century Co. $6 net.

These two travel volumes, issued within a few days of each other, invite comparison. Each is beautiful in form, both are excellently and profusely illustrated, and their subjects are in large part the same. In spite of her title, Miss Whiting goes as far afield as Corfu, and deals (very well) with the story of Dr. Schliemann. She also takes up somewhat inadequately the Eleusinian mysteries and sculpture and philosophy, and has chapters on Contemporary Literature in Greece, Ethical Poetry of Greece, the Progress of Greece, the First Century of Greek Independence, and other subjects. Mr. Hichens has chapters on In and Near Athens, The Environs of Athens, and Delphi and Olympia, as well as on Picturesque Dalmatia, Constantinople, and Stamboul, the City of Mosques. For the third time he has the aid of Jules Guérin's brush, presenting twelve illustrations in color as well as others in black and white. Thus the two volumes overlap very largely and often deal with the same minor topics—the Acropolis, the Parthenon, the landscape, and the people. Both writers offer considerable interesting and valuable information.

With these external resemblances similarity ceases. Miss Whiting's volume reads as if written rather hastily. Spontaneity, especially in the critical passages, seems forced. Mr. Hichens provides a different atmosphere—indeed one may almost say that atmosphere is characteristic of his work. In the part that deals with Greece the reader is compelled to say—here is a man who knows his Greek and his Grecians and loves both of them. There is evident throughout the contact of intelligent sympathy vibrant with responsiveness. Under his pen the crises of the Greeks are present to the reader; he lives them over again in sadness over defeat, or in triumph through victory. The eye for color, the ear for harmony, the voice for chaste and restrained description are all here. One reads on and on, carried forward by the sympathetic magic of exposition in masterly English. In so much that is good it is difficult to make selections, but one must not miss the description of the Caryatids (pp. 74–78), and of Thebes and the Lion of Chæronea (pp. 147–151). Everywhere is evident power in phrasing so as to express (not conceal) thought.

BOOKS FOR CHILDREN

Baum, Frank L. The Patchwork Girl of Oz. Pp. 340. Chicago: The Reilly & Britten Co. $1.25.

If Mr. Baum had had his way he would have written no more stories of Oz. But when an author is so popular what can he do but write another book? He confesses that this could never have been done had not Marconi invented the wireless telegraph. So now he has direct communication from his desk with the people of Oz, and gets all the latest news there is. "The Patchwork Girl" is the most recent creation from the fertile brain of Mr. Baum. In format the book is close kin to the first inimitable "Wizard of Oz." This cloth heroine is brought to life through the agency of some magic powders, and she experiences swift adventure that will please a multitude of admirers of the pseudo-fairy tale.

Bend, A. Russell. With the Men Who Do Things. Pp. 275. New York: Munn & Co. $1.50 net.

The civil engineer is the hero of the day. Big accomplishments in construction are made possible through his imagination. There is not a boy who will not be held entranced by any account of the marvels of steel work; and there is nothing more romantic than the manner in which tunnels are dug beneath river-beds. The one mistake made by Mr. Russell in this new book of his is that he did not content himself with a direct narrative rather than attempt to combine with description a story that is artificial and very weak. There are personal accounts based on actual fact included in his narrative, such as that which tells how a man was blown through a river-bed, and one which describes how a human body stopt a leak during the construction of the aqueduct.

Caldwell's Boys and Girls at Home. Tenth year of issue. Pp. 192. New York: H. M. Caldwell Co.

Many authors help to make the varied feast contained in this annual which reminds us of "Chatterbox," tho it is milder in content and better in print. And it differs from "Chatterbox" in this respect, that it is intended for very much younger readers. The literary value is not of the highest order either in the verses or in the stories, but the tone is harmless and mildly entertaining.

Gilbert, H. M. The Conquerors of Peru. 8vo, pp. 286. New York: T. Y. Crowell Co. $1.50 net.

This is a retold version of Prescott's "Conquest of Peru." Says the author in his preface: "The object in retelling Prescott's history has been to make it acceptable to young people who may be discouraged by the solid pages of the original work. For this purpose, therefore, the historical style has been avoided." In other words, a story has been invented, with much dialog. The essentials of Prescott are converted into more dramatic form, and Pizarro is made a hero rather than a figure of historical value alone.

Goodwin, Alice Howland. Rhymes from the Rhineland. 12mo, pp. 102. Boston: Sherman, French & Co. $1 net.

In general appearance this book reminds one of those charming little books issued in Germany at such abnormally small prices. But the latter are much more artistic, because there are colored dabs on every page that lend brightness and cheer to the text. German poets, like all poets the world over, are given to fantasy, to parables, to outdoor reveries, and to homely sentiment. In this slim little volume there are gathered a varied assortment of verses by Goethe, Rückert, Förster, and others, selected with the idea of appeal to children. The translations are almost literal, and for that reason they are rather jagged as to meter.

Don't Scratch—Wear Duofold

It's the ONE underwear that insures the UTMOST WARMTH *with* the greatest comfort under *every* condition of winter weather.

In steam-heated office — on storm-swept street — in chilly trolley, you'll always find *Warmth with Comfort* in

Improved Duofold Health Underwear

Abrupt changes of temperature can't effect you through this two-ply garment. The outer fabric of long-fibred wool wards off the winter winds, while the inner fabric of softest cotton is cheerful and soothing to the skin.

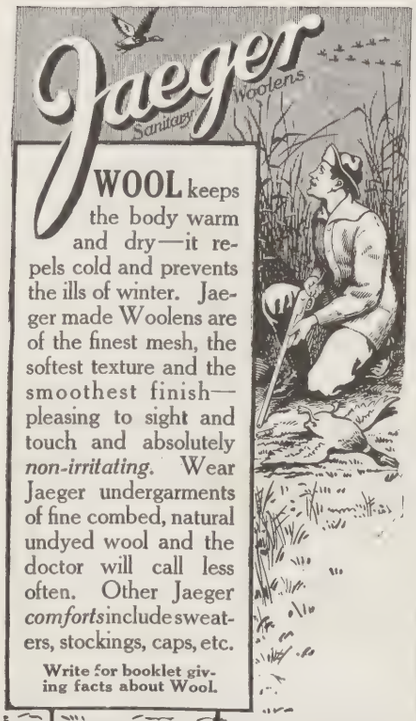
Between inner and outer fabrics are air spaces of generous size — that ventilate the pores, help to absorb moisture, and keep the body *fresh and clean* as well as *warm and comfortable.*

"Inside Man" and "Outside Man" alike need DUOFOLD for Health and Comfort.

Get YOURS to-day from YOUR Dealer.

A Free Sample of DUOFOLD material, also an illustrated booklet, showing the many styles, weights, and sizes in which DUOFOLD is made will be sent you on request.

DUOFOLD HEALTH UNDERWEAR CO.
10-42 Elizabeth Street, Mohawk, N. Y.



WOOL keeps the body warm and dry—it repels cold and prevents the ills of winter. Jaeger made Woolens are of the finest mesh, the softest texture and the smoothest finish—pleasing to sight and touch and absolutely *non-irritating*. Wear Jaeger undergarments of fine combed, natural undyed wool and the doctor will call less often. Other Jaeger *comforts* include sweaters, stockings, caps, etc.

Write for booklet giving facts about Wool.

Dr. Jaeger's S.W.S. Co.'s Own Stores

Agents in all Principal Cities

Harrison, Florence. Elfin Song. Pp. 142. New York: H. M. Caldwell Co.

There is usually a great amount of sincerity in pictures and jingles done by the same hand. Like all poets who seek to catch the child spirit, the author of "Elfin Song" becomes artificial, for instance, in such a poem as "The New Year." The pictures will be understood more often than the thoughts they illustrate. The book is charmingly bound and there is a certain fairy quality to it.

Kelland, Clarence B. Mark Tidd. Pp. 317. New York: Harper & Bros. $1 net.

It is very apparent that either the biography of Mark Twain or stories of Mark Twain were the inspiration for the present narrative, which is full of push and go, and is replete with mystery and adventure. These adventures involve a cave and an invention stolen from the hero's father. More than that, the hero himself is a distinct character, inasmuch as he departs from the usual run of manly fellows and appears in the unprepossessing guise of a fat boy. But there is no need to laugh at Mark long, even tho he has a broad expanse of back and stutters dreadfully.

Scott, Sir Walter. Ivanhoe. Pp. 127. New York: T. Y. Crowell Co. $0.50 net.

E. P. Prentys has taken upon himself to abridge Scott for young readers and has hurried us through the story of "Ivanhoe" with not much ado as to Scott's style or flavor. Scott may be prolix at times, but it is impertinence to tamper with him. If boys and girls of to-day are too busy to read Scott in the original, there will come a time when the world will again be romantic and need the Wizard.

Verrill, A. H. Harper's Aircraft Book. Pp. 245. New York: Harper & Bros. $1 net.

Were the truth to be known, it would be found that many a boy in the United States is expert in the making of flying-machine models. The author himself confesses in his introduction that "many boys have already accomplished wonderful results in the inventions, designs, and construction of model fliers, and the world's records for speed and distance flights of these miniature aircraft are held by American boys." This manual, which attempts, by means of lucid text and detailed drawings, diagrams, and photographs, to tell how to build a racing model, a glider, and a hydroaeroplane, has been written with great care after consultation with the most noted aviators in America. It may be taken as an authority in its special field.

Marks, Jeannette. Vacation Camping for Girls. Pp. 229. New York: D. Appleton & Co. $1.

This is the first book of its kind that has come to our attention. It is probably inspired by the Camp Fire Girls' movement. What to take to camp, what to wear in camp, what to eat in camp, and all the other varied activities attendant upon life in the open are described. The author has herself practised what she preaches. She even gives her camp address, so that her girl readers may correspond with her provided there are any questions which her book does not satisfactorily answer. Boys may look to their laurels now that girls are on the trail. There may be a female Daniel Boone yet, a fair Leatherstocking.

Fun—Entertainment—Instruction

A Christmas Gift that will Please Everyone

With the Radioptican throwing pictures, magnified many times, on a screen, boys and girls and all the family can entertain themselves and guests. You can arrange parties, hold prize contests, learn history, geography, natural history or amuse yourself better than in any other way.

The Radioptican projects any kind of picture, photo, illustration, post card, clipping, etc., in its beautiful colors and with all detail accurately brought out. No slides are necessary; just put in the picture itself. Any illustration or flat object (up to 6x7 inches) may be thrown on the screen and enlarged.

RADIOPTICAN

Extremely simple to operate. The electric model is connected like an electric fan. If you haven't electricity in your home, buy an acetylene model, complete with generator and ready to operate, or a gas model.

Every Radioptican carries a guarantee tag that protects the buyer from disappointment. Sold wherever photo supplies or optical goods are sold; also in department stores and toy shops.

Write for our Book, "Home Entertainments"

It is filled with ideas for all kinds of fun at home. It will give you all the information desired on this wonderful machine. Ask your dealer for a demonstration of the Radioptican.

CURRENT POETRY

RABINDRANATH TAGORE'S poetry has already been quoted in these columns. The announcement that the Nobel prize for literature was awarded to him was received with satisfaction by the small but devoted group of his admirers—small because poems in prose never appeal to a large circle of readers. According to Mr. Ezra Pound, the poems are cast, in the original, in meters "perhaps the most finished and most subtle of any known to us." Mr. Tagore's translations of his own work seem to most readers to be plain prose, but his most enthusiastic followers consider them rhythmic.

The poetry of this distinguished Oriental has been introduced to America chiefly by *Poetry: A Magazine of Verse*. Through the courtesy of its editor, Miss Harriet Monroe, we give this week one of the "narratives" which are to appear in the next issue of that interesting periodical. There is much descriptive beauty in these lines; such a phrase as "that golden bubble is empty of all but hot vapor of pride" is not readily forgotten. But the theme of the poem is well worn, and not all of us have forgotten a story with a different climax—a story in which One greater than "Narottam" said, "For ye have the poor with you always."

The Temple of Gold

BY RABINDRANATH TAGORE

"Sire," announced the servant to the King, "the saint Narottam never deigns to step into your royal temple. He is singing God's praise under the trees by the open road. The temple is empty of all worshipers. They flock round him like bees round the fragrant white lotus, leaving the golden jar of honey unheeded."

The King, vexed at heart, went to the spot where Narottam sat on the grass. He asked him, "Father, why leave my temple of the golden dome, and sit on the dust outside to preach God's love?"

"Because God is not there in your temple," said Narottam.

The King frowned and said, "Do you know twenty millions of gold have been spent on that marvel of art, and the temple was duly consecrated to God with costly rites?"

"Yes, I know," answered Narottam. "It was the dread year when thousands of your people lost their homes in fire and stood at your door for help in vain. And God said, 'The poor creature who can give no shelter to his brothers would aspire to build my house!' Thus he took his place with the shelterless under the trees by the road. And that golden bubble is empty of all but hot vapor of pride."

The King cried in anger, "Leave my land!"

Calmly said the saint, "Yes, banish me where you have banished my God."

Here is praise of the east by an Occidental. Mr. Titherington's poem (which we take from *Harper's Magazine*) is lamentably weak in the third and fourth stanzas; but as a whole it is dignified and sonorous.

Ex Oriente

BY R. H. TITHERINGTON

I am the East, the immemorial East.
My stedfast spirit hath not changed or ceased;
As I have stood through countless ages past,
So shall I stand while sea and mountains last.

Earth's scourges all have wreaked their will on me.
War, famine, pestilence, the cruel three,
Have poured on me what woes they have to give;
Harried and vexed, yet changeless still I live.

Wine Jelly when flavored with Abbott's Bitters is made more delightful and healthful. Sample of bitters by mail, 25 cts. in stamps. C. W. Abbott & Co., Baltimore, Md.

What Does It Cost To Run YOUR Car?

Why does your neighbor run his car at less cost than you do yours? *Not* that he is a better *driver* than you—or more careful—but simply that *he knows cars better than you.*

Every time you pay a bill—and particularly at the end of the year when you foot up the total cost—you ask yourself this tremendously important question: "How can I run *my* car at less cost?"

The answer is presented every week—for *your* benefit—within the pages of

THE AUTOMOBILE

This pioneer weekly publication is the recognized authority of the industry and gives technical information about cars written so that the layman can easily understand. Your car—your neighbor's car—is taken apart, dissected, analyzed.

THE AUTOMOBILE features the subject of the proper use and maintenance of *your* automobile—how to reduce cost—how to get *more* pleasure and profit out of it. Tells about the latest accessories and accurately interprets the trend of automobile designing, so that you will know what to look for in the next car you buy. One mistake avoided in buying a new car may mean hundreds of dollars saved.

Last week there were articles in THE AUTOMOBILE that you should have read—others are being told this week—additional ones *will* be told next week. *Don't miss any more of them.*

Send $1 for a Special Trial Subscription

For a one dollar bill you'll get THE AUTOMOBILE for 4 months—18 interesting numbers, including the BIG FIVE show issues.

These show numbers (25 cents a copy) are in themselves worth more than the price. They'll contain a comprehensive account of the national automobile shows. Even better than being at the shows is to study the exhibits as they are presented upon the pages of THE AUTOMOBILE.

Tear out this page. Pin a dollar bill to it. Write your name and address in the margin. Send it to us *today*. Your subscription will start with the current issue.

The Class Journal Company

239 West 39th Street, New York City

I look afar, and view my foe, the West,
Proud, eager, clamorous, scorning peace and rest.
She thinks me feeble, holds me in despite:
I heed her not; I know my hidden might.

Heathen she calls me, and idolator,
And yet the creed she vaunts I gave to her;
And knows she truly what the precepts mean
That Jesus taught, the lowly Nazarene?

In bygone centuries my patient eyes,
Unmoved, have watched her grandest empires rise
And fall, her brightest glories wax and wane;
What I have seen, that may I see again.

Her marching legions trample on my shore,
And in my ears her murderous cannons roar;
They come, they pass, and when their din has ceased,
Still I remain the immemorial East.

Careless she hurls her challenge forth to me,
Sure of her self-appointed mastery;
But who can read the unwritten page of fate?
Lo! silent and inscrutable, I wait.

"The most individual of American poets," is the term a writer in *The Outlook* applies to Edwin Arlington Robinson. And he writes of his method:

"In a dozen lines he can sum up the tragedy of a whole life and tell the story so directly and succinctly that the reader is hardly aware of the searching wisdom, the vision, and the understanding which lie in every calmly chiseled phrase."

This is sound criticism; it is pleasant to find an American weekly printing an appreciation of so remarkable and so little known a poet as Mr. Robinson. It is even more pleasant to find in the same issue of *The Outlook* a poem by Mr. Robinson—the first to appear for some years. "The Field of Glory" has enough thought in it to fill a novel, and it shows its author's characteristic economy of expression.

The Field of Glory

By Edwin Arlington Robinson

War shook the land where Levi dwelt,
And fired the dismal wrath he felt,
That such a doom was ever wrought
As his, to toil while others fought;
To toil, to dream—and still to dream,
With one day barren as another;
To consummate, as it would seem,
The dry despair of his old mother.

Far off one afternoon began
The sound of man destroying man;
And Levi, sick with nameless rage,
Condemned again his heritage,
And sighed for scars that might have come,
And would, if once he could have sundered
Those harsh, inhering claims of home
That held him while he curst and wondered.

Another day, and then there came,
Rough, bloody, ribald, hungry, lame,
But yet themselves, to Levi's door,
Two remnants of the day before.
They laughed at him and what he sought;
They jeered him, and his painful acre;
But Levi knew that they had fought,
And left their manners to their Maker.

That night, for the grim widow's ears,
With hopes that hid themselves in fears,
He told of arms, and featly deeds,
Whereat one leaps the while he reads,
And said he'd be no more a clown,
While others drew the breath of battle.—
The mother looked him up and down,
And laughed—a scant laugh with a rattle.

She told him what she found to tell,
And Levi listened, and heard well
Some admonitions of a voice
That left him no cause to rejoice.—
He sought a friend, and found the stars,
And prayed aloud that they should aid him;
But they said not a word of wars,
Or of a reason why God made him.

And who's of this or that estate
We do not wholly calculate,
When baffling shades that shift and cling
Are not without their glimmering;
When even Levi, tired of faith,
Beloved of none, forgot by many,
Dismissed as an inferior wraith,
Reborn may be as great as any.

"'Gainst," "o'er," "e'er," and the other poetical contractions generally display sloth on the part of the writer who uses them. The repetition of "green" in the following poem does not materially strengthen the line, and Miss Dundas might better have written "Green birds against a blue, blue sky." Aside from this line the poem is vividly picturesque. We take it from the London *Spectator*.

India

By Betty Dundas

Green, green birds 'gainst a blue, blue sky,
The scream of the parrots as past they fly,
The golden shimmer of hot, hot air,
And an arid plain 'neath the sun's fierce glare.

Shadows lie sharp on the sun-baked land,
Nothing but shadows and dry, bare sand;
A yellow dog goes slinking by,
And a blue rock pigeon wheels on high.

And the pilgrims pass in an endless row,
Shuffling, mumbling, on they go;
Bent with burdens, and years, and pain,
They straggle past in a motley train.

The jackals wail in a distant tope,
Wail and wail like a soul's lost hope.
And I close my eyes to the ceaseless hum
Of the grinding rice and a native drum.

An intellectual appeal always marks the verse of Thomas Hardy. He seldom writes what may honestly be called a poem; there is little music in his verse, but there is something that makes it memorable. He is cryptic, but not deliberately obscure. This poem we find in the London *Nation*.

Starlings on the Roof

(Moving House, Michaelmas)

By Thomas Hardy

"No smoke spreads out of this chimney-pot,
The people who lived here have left the spot,
And others are coming who knew them not.

"If you listen anon, with an ear intent,
The voices, you'll find, will be different
From the well-known ones of those who went."

"Why did they go? Their tones so bland
Were quite familiar to our band;
Fresh comers we shall not understand."

"They look for a new life, strenuous, strange;
They do not know that, let them range
Wherever they may, they will get no change;

"They will drag their furniture ever so far
In their search for a home no miseries mar:
They will find that as they were they are,

"That every hearth has a ghost, alack!
And can be but the scene of a bivouac
For a painful halt till the time to pack!"

Baker Electrics

QUALITY SERVICE

The surpassing individuality of the new Baker Electric Coupe and the new Double Drive Worm Gear Brougham is typified in the offer of special interiors created by the eminent French Designer, *M. Paul Poiret.* In the style of which he is the accepted master, Poiret has produced a variety of exquisite effects in self-toned harmonies of old gold, wine color and shimmering greys, entirely unique in motor car interiors, which will appeal to the discriminating woman as unusually distinctive.

PERSONAL GLIMPSES

A BACK-TO-THE-LANDER'S VISION

COUNTRY boys who aspire to be railroad presidents will wonder how William C. Brown, head of the New York Central system, ever got into his head the idea that managing a farm in Iowa would be more satisfactory than running one of the two largest railroads on the continent—that is, they will wonder until they read and understand his reasons for returning to the land. Mr. Brown himself does not regard farming as necessarily a greater calling than railroading: he resigned his high position largely because he believed he would find more personal satisfaction in farming during the latter years of his career; and he wants to help along the nation-wide movement for better agriculture by proving by demonstration that his theories about the productivity of the soil are practicable. And his determination to do things himself will make his mission all the more important in the eyes of the people he seeks to help. Mr. Brown is sixty, and has been a railroader since boyhood. His ideas about the future of agriculture are given in an interview with a New York *Evening World* reporter:

From the windows of his workshop office in the Grand Central Terminal you can look out over miles of railroad track and a magnificent system of rails, switches, electrical installation, and railroad equipment, centering in that magnificent structure known as the Grand Central Station. It cost many millions of dollars. It typifies the apotheosis of railroad genius.

But President Brown wants to see the grass and the corn grow. He longs for the green fields instead of the barren track-yards. So after forty-four years of marvelously successful life in the railway world, attaining the highest honors it has to offer, he has resolved to retire. He is going back to the farm, making it the end as well as the beginning of his career.

President Brown has not definitely mapped out his plan of missionary campaign. Between now and the first of the year, he said, he would arrange that, but he has some very definite ideas about the work to be done for the nation and the general lines along which he intends to operate, which he exprest as follows:

"We have been for a century and a half recklessly exploiting the natural resources of a continent.

"Our agriculture has been a process of half farming, until land began to show conditions of exhaustion, and then moving on and taking up new land farther West. Now the land farther West to be had for the asking is gone.

"During the past ten years our farms have produced an average annual yield of less than 14 bushels of wheat per acre, while Germany produces 28 and the United Kingdom 32.

"Unless production can be immediately

and powerfully stimulated within five years, consumption of foodstuff in this country will have overtaken production.

"In the light of present high prices for farm products the abandoned and impoverished farms of the Eastern States and the half-cultivated farms of the West seem utterly incomprehensible and inexcusable.

"Consumption is overtaking production with alarming rapidity, and values have been rising by leaps and bounds.

"Gradually improved methods will increase the yield per acre of the nation's farms, but the supply will never again catch up with the demand.

"After long years of discouraging struggle the farmer has come into his own and his prosperity will increase with the years.

"Population must continue to increase, but large increase in the area of arable land is a thing of the past.

"Consumption increased in the past ten years almost three times as fast as acreage and almost twice as fast as production.

"No danger which has ever confronted a nation compares with the danger which comes from an inadequate food supply.

"Herein lie the farmer's marvelous opportunity and his solemn duty.

"We are trustees holding this land as a sacred trust for generations yet unborn.

"I would make our agricultural colleges and the agricultural departments of all colleges in fact what they are in name by limiting admission to young men who want to study and school themselves in scientific agriculture for the purpose of becoming first-class farmers, thoroughly equipped for and vitally interested in that most honorable profession.

"I would double our rural population and more than double the product of the nation's farms.

"The United States is building two or three great battle-ships almost every year, which cost, fully equipped, perhaps an average of nine million dollars each, and it costs close to a million a year each to man, supply, and maintain them.

"What one of these fighting machines costs the Government would establish and fully equip two splendid experimental farms of 640 acres each in every State in the Union, to be operated by the general Government.

"They would soon be followed by 160-acre farms owned and operated by the State in every county in our great agricultural States.

"Such farms, once established, would not only be self-sustaining, but in my opinion would show a handsome profit. The effect of such a system of practical education upon the product and profit of the nation's farms would be almost beyond comprehension.

"Let the Government invest the price of one battle-ship in this important work and follow the investment up intelligently and perseveringly for ten years, and the value that will have been added to each year's crops of the nation's farms will buy and pay for every battle-ship in all the navies of the world to-day.

"We must increase production by more intelligent methods or we must face the relentless certain coming of the day when we shall not produce food enough to supply our own necessities."

"GOODFELLOWS!"

Some of us with too much and some of us with too little. Some jobless and hopeless. Some toyless and not at all understanding why they should be.

Goodfellows distribute and equalize the world's happiness. Sometimes you'll find a whole family of Goodfellows, all sizes and both sexes—as in this tableau of Christmas cheer—in "the Car of the American Family."

Hupmobile

Like the spirit of Christmas, the Hupmobile brotherhood encircles the globe.

You need nothing more to confirm this than the fact that our European and other foreign demand will not be satisfied with less than half of the 1914 output; and that the South African market alone stands ready to absorb $1,000,000 worth of Hupmobiles this year.

To your neighbors across the seas, the Hupmobile has shown itself a car of superior economy and superior ability to meet their needs.

Their experience differs in no wise from yours—they speak and hear nothing but good about the Hupmobile.

"32" Touring Car or Two-Passenger Roadster with two-unit electric generator and starter; electric lights; oversize tires, 33 x 4 inches; demountable rims, extra rim and tire carrier at rear. $1200 f. o. b. Detroit.

In Canada, $1380 f. o. b. Windsor factory

Hupp Motor Car Company, 1243 Milwaukee Ave., Detroit, Mich.
Canadian Plant, Windsor, Ontario

Last August the Hupp Motor Car Company closed the biggest year in its history.

Competent authorities rank it as one of the six greatest successes of 1913.

We have received deposits from our dealers on 20,000 Hupmobiles for the season of 1914.

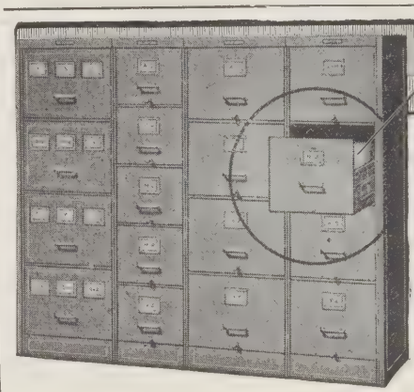
Since September 1st, orders for immediate shipment have broken all previous records, so much so, that our winter production, ordinarily at low water mark because of lighter demand, now amounts to the pro rata daily output for the entire year; and still falls far short of filling our orders.

These conditions indicate two things:

First: That our belief that the Hupmobile is the best car in its class in the world has been endorsed in an extraordinary and emphatic way. We have never in any one season built enough Hupmobiles to fill the demand.

Second: That 1914 will differ from previous years in this respect only—that it will push our production facilities to a greater extent than ever to satisfy the growing army of Hupmobile believers.

The car of The American Family



Gives *More* Drawer Space Takes *Less* Floor Space

That's a good thing to bear in mind when buying new filing equipment. Floor space costs money. ALLSTEEL office furniture saves it—*and gives you more filing space per drawer*—300 sheets *extra* capacity *each*.

Allsteel **Filing Equipment**

also protects records against fire, damp, rats, mice, dust and sneak-thieves. Has a durability which only the finest steel *can* have. Beautifully finished in oak, mahogany or olive green. We are the largest manufacturers of standard steel office equipment in the country. A complete line always ready for your every filing need. All described in our finely-colored catalog, sent free with the name of our nearest dealer. Write for it.

A FRIEND OF LEPERS

THE leper colony on the island of Molokai, Hawaii, with its six or seven hundred population, is said to be the best-equipped institution of its kind in the world. The "homes" are substantial, and the people have hospitals, churches, stores, schools, and administration buildings. The treatment which most of the patients receive is surgical, and there is an ideal surgical operating hospital for the work done at the clinics, which are held bi-weekly. These modern improvements have been provided largely through the efforts of Dr. William Goodhue, who has worked for the lepers for more than ten years. Dr. Robert Koch, the famous bacteriologist, visited the settlement a few years ago and called it "one of the greatest clinics in the world." Dr. Goodhue's work is described by his brother, Dr. E. S. Goodhue, in *The American Journal of Clinical Medicine*, from which we quote in part:

Dr. Goodhue has not written any account of his work among the lepers, except the reports that are required biennially by the Hawaiian legislature. Every mention of his work at Molokai that has appeared in public print or otherwise has been due to the interest felt by his numerous friends, but even to whom he has been consistently reticent regarding his work. Said one traveler of him: "I never saw a man so absolutely devoid of selfish ambition and love of praise." But in his reports he has taken pains to mention others who have been associated with him in his work, and even to exaggerate, perhaps, the importance of their help.

With the Roman Catholic fathers he is on terms of deep friendship, altho a Unitarian himself; and, like Lincoln, he has worked, not for religion's sake, but for the love of the brotherhood of man. He has devoted his spare time to his laboratory, where in 1905 he discovered the bacillus of leprosy in the mosquito and the bedbug, and at the request of the priests made, at the time, a report of the bearing of this discovery upon the spread of leprosy in Hawaii. In this report he speaks of the assistance of Father James, now in Paris, while he also has often referred in a kindly way to "Father" Dutton, whose picturesque attitude toward lepers and Molokai has been widely advertised.

How much larger and more humane Dr. Goodhue's work has turned out than that so simply outlined editorially by a medical journal issued in his (that time) home town in 1900! Said *The Southern California Practitioner* for September, 1902, in referring to the recent assignment:

"Dr. Goodhue has been appointed medical superintendent of the Molokai Leper Settlement. He is thirty-two years of age, a graduate of Rush Medical College, Chicago, 1897. He goes to Molokai for special work for the Government. The light-cure (*x*-rays) will be thoroughly investigated, as well as other curative measures. It is the intention of the superintendent thoroughly to investigate the cause of leprosy, and, in connection with this, if possible, to discover what part

the mosquito plays in the propagation of leprosy. The field is large, and the scientific world will watch the work of this new devotee with interest. . . . May God bless him and all mankind in his work!"

Since his incumbency, the superintendent has prepared for the Hawaiian Board of Health the following reports of his work: "Alterant and Eliminant Remedies in Leprosy"; "Scabies Among Lepers"; "Some Clinical Observations in the Leper Settlement"; "Treatment of Leprosy."

The latest and most important result of his work is embodied in a report just issued by the Board of Health, and is an account of a positive cure of leprosy by surgical measures.

After reviewing the results, in his hands, of the local and systematic treatment of leprosy, Dr. Goodhue says:

"P. was declared a leper, in 1906, by the Examining Board for Lepers, after the usual careful clinical examination, in conjunction with the report of the official bacteriologist. Entered the Settlement, Molokai, October, 1906. . . . Operation was a radical dissection of the tissues involved. . . . For conservative reasons, I have purposely avoided reporting the above case until a sufficient length of time had elapsed to place the result beyond the shadow of a doubt or the possibility of recurrence. Eight months after outlined operation, patient, brought before the official examining board, presented no physical blemishes, and rigid bacteriological tests were neutral. The patient was declared non-leprous, discharged from the Leper Settlement, and is now leading a useful life as a road overseer on the island of Maui."

Dr. Goodhue was born at Arthabaskaville, Province of Quebec, Canada, October 8, 1869, his parents being James Goodhue and Mariam Emerson, both Americans of old New England families. He received his elementary education at home and in the public schools of Rochester, N. Y. Going with his parents, in 1884, to Riverside, California, he took, later, a business course in Los Angeles; but was persuaded by his brother, then a medical practitioner in that city, to begin the study of medicine. This he finally did with some misgivings, and graduated from Rush Medical College in 1897.

Just previous to entering college, he became engaged to a young woman whom he idolized, and when, later, she gave him up to marry an old man of assured position and wealth, he faltered—"I am heartbroken," he wrote; "life is dark before me." But he turned to his work with redoubled assiduity and mastered his weakness, thankful at last that he had not become married to a woman so unworthy of him. Perhaps because of this disappointment his heart is more tender with love and pity for those who suffer. He now is happy in the companionship of a lovely, devoted wife and a sweet little girl, in whom he is totally wrapt up.

From a recent account of a traveler's interview with him, we get the following descriptive passages:

The Howard Watch

One very good way to show your affection and your high hope for the boy is to give him a HOWARD Watch for Christmas.

The HOWARD means so much more than the giving. It pledges the young man to a fine tradition. It expresses so well your expectation for him and the work he is to do in the world.

To own a HOWARD Watch is to be in distinguished company. The HOWARD is identified with the life and history of prominent Americans ever since 1842. It is pre-eminently the watch of successful Americans today.

A HOWARD Watch is always worth what you pay for it.

The price of each watch is *fixed* at the factory and a printed ticket attached —from the 17-jewel *(double roller)* in a Crescent *Extra* or Boss *Extra* gold-filled case at $40, to the 23-jewel at $150— and the EDWARD HOWARD model at $350.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to know.

Admiral Sigsbee has written a little book, "The Log of the HOWARD Watch," giving the record of his own HOWARD in the U. S. Navy. You'll enjoy it. Drop us a post card, Dept. O, and we'll send you a copy.

Ask for Star Brand Typewriter Ribbons

"He is tall and large, over six feet, I should judge, with a limp due, I am told, to an illness in early life. But his carriage is dignified, his face strong and benignant. Deep-set eyes, a rugged face with tanned skin, some wrinkles, grayish hair—a face resembling in many ways that of Lincoln. It is always serious, even when humor plays about the mouth, care-marked. He was willing to show me anything or tell me anything except about himself. 'I'm a privileged man,' he said, 'just blest with a lot of work I am doing but lamely. If I had six individualities I might help these people some.' 'To what do you attribute your great success?' I asked him. 'If you call this great success, it may be due to several things: A good father and mother—and,' with a twinkle in his eye, 'a girl who jilted me just at the psychological moment.'"

THE SPICE OF LIFE

A Through Passenger.—SHE—"Did you ever see 'The Castle Walk'?"

HE—"Oh, dear, no. I've been on the wagon all through college."—*Yale Record.*

Quick Diagnosis.—HOMELY PATIENT—"My face pains me, doctor. What shall I do?"

DOCTOR—"I'm sure I don't know. You might try a beauty specialist."—*Boston Transcript.*

A Matter of Numbers.—"If a man kills another man is he always put in jail, mama?"

"Not always. Sometimes he is paid by the Government to do it; and if he can only kill enough he will have monuments erected to him."—*Life.*

Foiling Chris.—Columbus had returned to Spain bringing news of wonderful new lands across the sea.

"How much shall I write on it?" queried the maritime reporter of the Cadiz *Evening Bulletin*, who had brought in the story.

"Don't write anything," replied the editor. "Let Columbus pay for his advertising if he wants any. It's probably a real-estate promotion scheme."—*Newark News.*

A Wise Driver.—A South Dakota Congressman tells a story of the old coaching days, when a certain Pete McCoy, one of the most skilful of the old stage-drivers, operated a conveyance that made a circuit of Deadwood, Carbonate, Spearfish, and Bear Gulch. Pete was famous for his fast, furious, daring driving.

One day, the story runs, Pete tore into Carbonate on his usual dead run. Up to the "hotel" door clattered the stage. There, suddenly, as it stopt, one of the four horses fell dead.

"Kinder sudden, that, Pete," said a bystander.

"Nuthin' sudden about it," said Pete. "That hoss died at the top of the hill, ten miles back; but I wasn't goin' to let him down until I got to the reg'lar stoppin' place."—*Lippincott's Magazine.*

Wise Walter.—" I gave Walter a beautiful necktie of my own make for a Christmas present," said Mabel.

" Was he pleased? "

" Oh, yes; he said its beauty shall be for no other eyes than his own. Wasn't that lovely of him? "—*Lippincott's.*

The Ways of Mas.—Mrs. Gordon had recently moved into the neighborhood.

" I thought I would come and tell you that your James has been fighting with my Edward," said one of the neighbors, one morning as she called at Mrs. Gordon's door, " and settle the matter if I could."

" Well, for my part," responded Mrs. Gordon, haughtily, " I have no time to enter into any discussion about the children's quarrels. I consider myself above such trifling things."

" I'm delighted to hear it," was the reply. " I'll send James over on a stretcher in an hour or two."—*Life.*

An Idea.—The elderly stout man in the fourth row was attentively following the pastor's sermon.

" Let us then," said the exhorter, " break the bonds of custom and throw off the shackles of self, and acknowledge our debt to life's fundamental lessons. Let us deduct from the year's balance-sheet those obligations which we are morally bound to assume."

At this point the stout man suddenly chuckled and slapped his leg with considerable force.

After the sermon he was overtaken by the pastor.

" You seemed greatly pleased with one section of the sermon," he said.

" Yes," replied the stout man. "What you said reminded me of a ripping new scheme for beating the income tax."—*Cleveland Plain Dealer.*

Chicago Owns Up

QUACKVILLE

Columbia's the Gem of the Ocean,
U. S. is the home of the brave,
And Chicago's the lair
Of the wearers of hair
Whose game would be spoiled by a shave.
No work is too coarse to get over,
No fraud in which business is slack,
No cheat is too old,
And no swindle too bold—
Chicago's the home of the quack.

The natural home of the faker,
The soil of this city is rich
For phony physicians
And quack politicians,
"Messiahs" and "Princess" and sich.
Where else could a prophet like Dowie
Put over his mystical clack?
Where under the sky
Could "Prince" Hanish get by
Save here, in the home of the quack?

A "Prince" can go out on the corner
And preach any mystical rot;
The gudgeons will gather
And swallow his blather,
And start a new cult on the spot.
You may travel the highways and byways
From Dan to Beersheba and back,
But the place on the map
Where bloometh the yap
Is Chicago, the home of the quack.

—*Bert Leston Taylor, in The Chicago Tribune.*

Old Saw with New Handle.—The pessimist Fletcherizes his quinin pills. The optimist gets treed by a bear and enjoys the view.—*Yale Record.*

Know Him?—"Pa, what is a near-humorist?"

"A near-humorist, son, is a person who says, when he finds an oyster in a stew, 'Well, well, little stranger, what are you doing here?'"—*Birmingham Age-Herald.*

A Guess.—TEACHER—"Now, children, can you tell me what are the national flowers of England?"

CLASS—"Roses."

TEACHER—"And France?"

CLASS—"Lilies."

TEACHER—"And Spain?"

(Silence for a minute—then small voice at back of the schoolroom.)

"Bullrushes, ma'am."—*Life.*

WARNING

Fraudulent persons, representing themselves as agents of publishers of popular periodicals, are at work in various parts of the country. We urge our readers to pay no money for periodical subscriptions to strangers, even tho they show printed matter purporting to authorize them to represent publishers, especially when cut rates and bonuses are offered. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect your community is being swindled, notify the Chief of Police and the publishers, and arrange another interview at which the proper action can be taken.

Buy the Car When You Know the Springs —Not Before

YOU can judge the *beauty* of the car you buy at the first glance. You can tell something of its *power* when the demonstrator takes you over a hill. But you can't be sure of the *springs* unless you determine what springs they are and what their record is. Because a spring giving supreme comfort in a demonstration may, within three months, sag and settle until it bounces and jolts you at every slight depression in the road.

Avoid spring uncertainty and disappointment. *Specify Detroit Springs and be sure.* We protect you beyond that first demonstration, which can't tell you what the spring is worth. Every Detroit Spring is backed by a *guarantee* against settling or breakage for *two years* from date of manufacture. It is spring insurance for you.

Identify Detroit Springs by This Trade Mark

RESILIENT

Detroit Springs

SILENT TRADE MARK =SELF-LUBRICATING

And by the Lubricating Cup Near the End of Each Leaf

When you're looking the car over, watch for that Detroit Spring trade mark.

It means safety. Detroit Springs are almost impossible to fracture.

Comfort is certain.

Your tires will wear longer because Detroit Springs automatically assume a large percentage of this work.

That pest of the motorist—squeaking—is unknown.

These things require an inspection of the springs. And if you don't find the trade mark or the lubricating cups on the leaves, demand that your car be equipped with Detroit Springs.

You can get them. True, they cost the manufacturer a little more. But he'll give them to you, *if you insist.* Detroit Springs on any car are a strong indication of quality construction throughout the car.

How to Ride Comfortably and Safely Write for Booklet

It pays to know springs, *to know why you should insist on Detroit Springs.* The information can be yours for the asking. A booklet of remarkable interest will be mailed to you on request. It tells the story of spring making from your standpoint as a car owner. Explains how Detroit Springs insure your safety and lengthen the life of your car and tires. Write for it.

Detroit Steel Products Company
2252 East Grand Boulevard, Detroit, Michigan

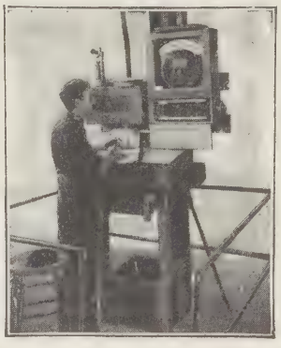
Why Detroit Springs Don't Squeak

The silence of Detroit Springs is enough in itself to decide you in their favor. The Self-Lubricating Device —patents pending—is simple, but mightily effective. Near the end of each leaf is a small distributing reservoir that automatically feeds the lubricant as it is needed. Not only is there no squeaking, but the spring is assured of far longer life. That's one of the reasons—

Why Detroit Springs Are Guaranteed for Two Years

Other reasons are material reasons, constructional reasons, workmanship reasons, test reasons.

We decided to make the guarantee of two years' length, because we wanted to be conservative. Detroit Springs will give excellent service indefinitely. Our confidence is shown by the fact that we have doubled and in many cases trebled the best car guarantee. And our confidence is based on the mostenduring of foundations.



Pyrometer

This man regulates the delicate Triple Heat Treatment of Detroit Springs. Forty-eight fires are maintained at just the right temperature by means of the Thermo-Electric Pyrometer. The dial seen above indicates the heat of any furnace by a color system. The actual temperatures are known only to three members of our organization and are among the most carefully guarded secrets of our process.

Specify Detroit Springs on Your Next Car

"Mac, I've got a brand new corn-cob pipe!"

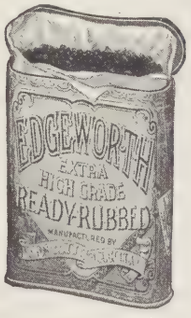
"Right there on the table, you'll find it if you want to smoke.

"Just a minute, don't fill it with that; let me show you a trick I learned from an uncle in Tennessee.

"You take a new pipe and hold it under the cold water tap for just a minute.

"Then start smoking while the bowl is still moist and that 'new pipe taste' isn't there.

"Now let me get you some Edgeworth—I keep *that* in the drawer. Recognize the blue box? This is Edgeworth Ready-Rubbed—the same as the good old Edgeworth Sliced Plug, only it's already rubbed up and ready for your pipe."



Suppose you were entertaining a pipe smoker in your home and had no Edgeworth to offer him—you would consider that as very serious if you were acquainted with Edgeworth.

Are you acquainted with Edgeworth, the tobacco that makes its smokers declare the pipe the best smoke of them all? If not, let us make you acquainted.

We'll send you a package of Edgeworth free—a sample. We wish that you would ask for it, get it and try it.

Just send your request for this sample on a post card and mention your dealer's name. The more people we can get to try Edgeworth the more people there are who begin to smoke it. It's a very fine Burley tobacco, every package of which is guaranteed.

Edgeworth Ready-Rubbed may be bought in 10c and 50c tins, everywhere, and in handsome $1.00 humidor packages. Edgeworth Sliced Plug, 15c, 25c, 50c and $1.00. Mailed prepaid if your dealer has none.

If you want the free package, write to Larus & Brother Co., 5 South 21st Street, Richmond, Va. This firm was established in 1877, and besides Edgeworth makes several other brands of smoking tobacco, including the well-known Qboid—granulated plug—a great favorite with smokers for many years.

The $1.00 Humidor package of Edgeworth Ready-Rubbed is a fine Christmas gift. If your dealer hasn't this package, Larus & Brother Co. will be pleased to mail one to your friend with your card upon receipt of $1.00 and they will pay the parcel postage.

INVESTMENTS AND FINANCE

WASTEFUL AMERICAN INVESTORS—PROFESSOR MÜNSTERBERG ON THEIR PSYCHOLOGY

PROF. HUGO MÜNSTERBERG, of Harvard, has recently given attention to the ways of investors. His article, by special arrangement with Messrs. Rollins, is printed in *Investments*, of which Franklin Escher is now in control as a separate publication. The problem taken up by Professor Münsterberg is not that of the prudent man who works for the money he saves and then invests it in 4 per cent. first-mortgage bonds, but rather the problem of those who, on the one hand, hide away their savings instead of making them productive, and on the other "throw them away in wildcat schemes." The first of these two extremes he finds easily understandable. It is hysterical fear of possible losses and unreasonable distrust of banks and bankers that cause men and women to hide savings and to avoid markets for investment. No doubt this class exists in larger volume abroad than here; here, in fact, it offers not much to complain of. Americans are rather given to falling into the second class, that is, those who throw money away in wildcat schemes. No doubt exists that men in America are more ready to throw their money into speculative abysses than are people in other countries. Professor Münsterberg says further in his interesting article:

"If we speak of suggestion in economic life, everybody at once thinks of the endless variety of suggestive advertisements. An announcement which merely gives information is, of course, no suggestion. But if, perhaps, such an announcement takes the form of an imperative, an element of suggestion creeps in. To be sure we are accustomed to this trivial pattern, and no one completely loses his power to resist, if the proposition to buy comes in the grammatical form of a command. If we had reached the highest degree of suggestibility, as in hypnotism, we could not read "Cook with gas" without at once putting a gas-stove into our kitchen. Yet even such a mild suggestion has its influence, and tends slightly to weaken the arguments which would lead to an opposite action. The advertisements, however, which the brokers send to our house, and which are spread broadcast in the homes of the country to those who have no technical knowledge of stock buying are surely not confined to such childlike and bland forms of suggestion. The whole grouping of figures, the distribution of black and white in the picture of the market situation, the glowing story of the probable successes with the bewildering hints of special privileges, must increase the suggestibility of the untrained mind and reenforce powerfully the suggestive energy of the proposition to buy. The whole technic of this procedure has nowhere been brought to such virtuosity as in our country.

"But the skill of the prospectus, with its sometimes half-fraudulent features, would after all not gain such influence if suggestion were not produced from another side as well, namely, through the instinct of imitation. The habit of making risky investments is so extremely wide-spread that the individual buyer does not feel himself isolated, and therefore dependent upon his own judgments and deliberations. He feels himself as a member of a class, and the class easily becomes a crowd, even a mob, a mob in which the logic of any mob reigns, and that is the logic of doing unthinkingly what others do. It is well known that every member of a crowd stands intellectually and morally on a lower level than he would stand if left to his spontaneous impulses and his own reflections. The crowd may fall into a panic and rush blindly in any direction into which any one may have happened to start, and no one thinks about it, or it may go into exaltation and exuberantly do what no one alone would dare to risk. This mass consciousness is also surely a form of increased suggestibility. The individual feels his own responsibility reduced because he relies instinctively on the judgment of his neighbors, and with this decreased responsibility the energy for resistance to dangerous propositions disappears. Men buy their stocks because others are doing it.

"But finally, may we not call it suggestion, too, if the individual, even tremblingly, accepts the risks of perilous deals because he feels obliged to grasp for an unusually high income in order to live up to the style of his set. Of course, every standard of living is relative. Everything depends upon the habits of those around us. If the community steadily screws up these habits, makes life ostentatious for those of moderate means as well as for the rich, hysterically emphasizes the material values, the will to be satisfied with the income of safe investments has to fight against tremendous odds. The truly strong mind will keep its power to resist, but the slightly weak mind will find the suggestion of the surrounding life more powerful than the fear of possible loss. If all the neighbors in the village have automobiles, the man who would enjoy a quiet book and a pleasant walk much more than a showy ride will yield and spend a thousand dollars for his motor-car where a hundred dollars for books would have brought him far more intense satisfaction. In no country have fashion and ostentatiousness taken such strong possession of the masses, and the willingness to be satisfied with a moderate income is, therefore, nowhere so little at home.

"We must not forget the superficiality of thinking, the uncritical, loose, and flabby use of the reasoning power which shows itself in so many spheres of American mass life. It is sufficient to see the triviality of argument and the cheapness of thought in those newspapers which seek and enjoy the widest circulation. It is difficult not to believe that fundamentally sins of education are to blame for it. The school may bring much to the children, but no mere information can be a substitute for a training in thorough thinking. Here lies the greatest defect of our average schools. The looseness of the spelling and figuring draws its consequences. Whoever becomes accustomed to inaccuracy in the elements remains inaccurate in his thinking his life long. If the American public loses a hundred million dollars a year by investments in worthless undertakings, surely not the smallest cause is the lack of concise reasoning. Wrong analogies control the thought of the masses. Any copper stock must be worth buying because the stock of Calumet-Hecla multiplied its value a hundredfold.

"But the irony of the situation lies in the fact that, as experience shows, those

who are the cleverest thinkers in their fields are in the realm of investments as easily trapt as the most superficial reasoners. It is well known that college professors, school-teachers, and ministers figure prominently on the mailing list of unscrupulous brokers, and their hard-earned savings are especially often given for stocks which soon are not worth the paper on which they are printed. Sometimes, to be sure, this unpractical behavior of the idealists really results from an unreasonable indifference to commercial questions. The true scholar, whose life is tuned to the conviction that he has more important things to do in the world than to make money, readily falls into a mood of carelessness with regard to the money which he does chance to make. In this state of indifference he follows any advice, and may easily be misled. But it seems probable that the more frequent case is the opposite one. Just because the teacher or the pastor has small chance to save anything, they give their fullest thought to the question how to multiply their earnings, and their mistake springs rather from their ignorance of the actual conditions. They think that they can figure it out by mere logic and overlook the hard realities.

"They resemble another group of victims who can be found in the midst of commercial life, the overclever people who rely on especially artificial arguments. They feel sure that they see some points which no one else has discovered, and while they may have noticed some small reasonable points, they overlook important conditions which the simpler-minded would have seen. They know everything better than their neighbors, and whatever their friends buy or sell, they at once have a brilliant argument to prove that the step was wrong. They generally forget that the listener must be suspicious of their wisdom, as they themselves have never earned the fruit of their apparent wisdom: They all, however, may find comfort in the well-known fact that hardly any great financier has died, not even a Harriman or a Morgan, without there being found in his possession large quantities of worthless stocks and bonds.

"But the variety of intellectual types, the careless and the uncritical, the overclever and the illogical thinkers, could easily protect themselves against the dangers of the shortcomings in their mental mechanism if their minds had not another trait, which, too, is more frequent in America than anywhere else in the world, the lack of respect for the expert. The average American is his own expert in every field. This is certainly not a reproach. It supplies American public life with an immense amount of energy and readiness to help. Above all, historically it was the necessary outcome of the political democracy. In striking contrast to the European bureaucracy, any citizen could, at any time, be called to be postmaster or mayor or governor or member of the cabinet. A true American would find his way, however complex the work before him. That was and is splendid. Yet the development of the recent decades has clearly shown that the danger of this mental attitude after all appears to the newer American generation alarmingly great in many fields. Civil service has steadily grown, the influence of the engineer and the expert in every technical and practical field has more and more taken control of American life, because the go-as-you-please methods of the amateur have shown increasingly their ineffectiveness. Education has slowly been removed from the dilettantic, unprepared school boards. The reign of the expert in public life seems to have begun. But in private life such an attitude is still a part of

A Box of Fine Cigars Makes a "Merry Xmas" All The Merrier

Actual Size of the Cigar and the Style of the Box

Let a box of 25 La REGINA (Victoria shape) Cigars (Price $2.00 delivered, all charges prepaid) carry your message.

We attend to all the details. Just remit to us with directions—we ship the cigars with your card enclosed, and notify the person addressed of the shipment.

La REGINA is not to be thought of as a 3-for-25c cigar (the rate at which we sell them). **The REGINA is a cigar that has a value quite apart from ordinary price making.** Our price based on a sale of millions of this brand a year over the counters of 800 United Cigar Stores—it's the 800-store-price.

No one on earth sells as many cigars as we do—therefore no one can buy at prices as low and get the **quality.**

And we never advertise a new cigar. Until a cigar makes good with the smokers we couldn't afford to risk the cost or our reputation. La REGINA has made good. The highest grade Havana in the filler, wrapped with the famous Connecticut broadleaf. A cigar with a "burn" in which zest is not sacrificed for mildness—but **exquisitely mild.** Attractively packed.

Money returned if cigars are not satisfactory. **The smoker decides.**

Remit, stating mild, medium or strong. With all orders filled our Profit-Sharing Certificates, List of Premiums and a beautifully illustrated catalogue.

A Gift to Father or the Friend who Smokes
A Sargent Patent Humidor

It keeps cigars or tobacco from drying out.
There are so many of our Humidors in use and because of their efficient work they have become known as the Smokers' Chum.
All Sargent's Humidors have a heavy patented stone set in the lid of the box, by means of which the moisture for the cigars can be controlled. This stone will absorb the water when poured on it, similar to a sponge, but makes leakage impossible and retains the moisture for a long time. We do not use any sponges or pads to become rancid or unsanitary.

Humidor No. 101, Mission finished and lined with glass, $2.00
Humidor No. 105, Mahogany finish, lined with white tile glass, $3.00
Humidor No. 106, Circassian Walnut, lined with white tile glass, $4.00
The above Humidors will be shipped Express collect.
Add 75c to the price of Humidor if you wish sent prepaid east of the Miss. River; west add $1.00.
Our Travelers' Cigar Case No. 13, holds 24 cigars, is $2.00 delivered.
SARGENT CIGAR & PLANTATION CO., Bridgeport, Conn.

the mental equipment of millions. They ignore the physician and cure themselves with patent medicines or mental healing; they ignore the banker and broker and make their investments in accordance with their own amateurish inspiration.

"It is then, after all, no chance that this commercially clever American nation wastes more in antieconomic fabrics than any other people on the globe. It is the outcome of psychological traits which are rooted in significant conditions of our educational and social life. Yet as soon as these conditions are recognized, and these reasons for waste are understood, it ought not to be difficult fundamentally to change all this and to make the savings of the nation everywhere really sources of national income."

ERIE'S PROPOSED BIG MORTGAGE

No definite announcement has yet been made as to the much-talked-of huge mortgage to be issued by the Erie Railroad, with a view to the absorption by it of existing mortgages and providing ultimately for further issues that may be required; in the main, it will be a refunding issue. Financiers have been interested in this issue, perhaps more than in other large blanket mortgages recently undertaken by some of the great railway systems, mainly because of a general knowledge that several layers of mortgage bonds now exist in the Erie system, and just how matters could be adjusted many fail to comprehend.

It seems to be not generally known that of the several layers of bonds practically all are secured on the mileage between New York and Lake Erie, the main line of the Erie. As pointed out by *The Wall Street Journal*, this line makes up less than half the entire present Erie system. West of Buffalo the Erie has under its control more than 1,000 miles of road. That mileage has against it only $40,000,000 in bonds held by the public, the rate per mile of mortgage being only $35,000, whereas the rate per mile on the main line is about $200,000. It is true that stocks in controlled companies and over $35,000,000 of their bonds are in the main deposited as additional security for Erie's present consolidated mortgage and general mortgage bonds, which in effect spreads the lien of those bonds over the western mileage. All the same, there exist at present only two mortgages on that part of the system. Inasmuch as the road through to Chicago is now double-tracked, its increased value as security for the proposed big mortgage is obvious. The existence of so great a number of mortgages on the main line is also qualified as to its seriousness by the fact that many of the underlying issues are small.

STRIKING RETURNS OF OUR FOREIGN TRADE

Reports that come from the Bureau of Statistics indicate, says *Bradstreet's*, that "the flood of foreign imports which it was predicted would follow the enactment of the new tariff bill has apparently been delayed." For October imports reached the sum of $132,893,960. In October last year the corresponding sum was $178,987,986. These figures indicate a decrease this year of 23.5 per cent., or over one-

Puritan Pub. Co., 777 Perry Bldg., Phila., Pa.

quarter. The writer comments further on these and other figures of our foreign trade:

"The decrease in duty-free imports was 20.6 per cent., and that in dutiable imports was 31 per cent. In this connection it should be noted that the imports for the first three days of October were included in the September statement; the tariff bill was signed on October 4, but even with the addition of the $13,665,000 of imports on these three days, the total October imports this year, $146,558,000, fall 18 per cent. short of those of October a year ago, and 14 per cent. short of those for September this year. The result of this sharp decline in import trade is to cause the imports for the ten months ending with October to fall behind those of a year ago by a considerable amount. At the close of October 3 the imports for the calendar year to date aggregated $1,327,294,071, a decrease of $5,600,656 from the full nine months of 1912, and by the end of October the decrease in all imports was $50,694,682, or 3.3 per cent.

"In the matter of exports, there is no evidence in the grand totals of a sag in this branch of trade, the October exports being $271,588,726, a sum 24 per cent. larger than that of September, only 2.5 per cent. smaller than the largest monthly total ever recorded—that of November, 1912—and 6.7 per cent. larger than the total for October, 1912, up to that time the heaviest monthly total ever recorded. The excess of exports in October, $138,694,766, is also the largest excess ever recorded in any month. The exports for ten months of this year aggregate $2,005,010,884, a sum 7.2 per cent. larger than was recorded a year ago at that date, and the largest total of exports ever recorded in a ten-months' period. The total imports and exports of merchandise for October and the ten months of 1913 compare with like periods of the two preceding years as follows:

OCTOBER

Imports	1911	1912	1913
Free of duty	$69,356,325	$102,711,717	$81,575,185
Dutiable	63,249,426	75,276,269	51,318,775
Total	$132,605,751	$177,987,986	$132,893,960
Exports			
Domestic	$207,634,661	$251,587,995	$268,927,453
Foreign	2,730,855	3,045,509	2,661,273
Total	$210,365,516	$254,633,504	$271,588,726
Exc. of exports	$77,759,765	$76,645,518	$138,694,766

TEN MONTHS ENDING OCTOBER

Imports	1911	1912	1913
Free of duty	$647,399,402	$812,604,530	$782,735,688
Dutiable	618,123,534	698,278,183	677,452,343
Total	$1,265,522,936	$1,510,882,713	$1,460,188,031
Exports			
Domestic	$1,636,363,087	$1,840,273,972	$1,974,350,084
Foreign	29,503,763	30,384,023	30,660,800
Total	$1,665,866,850	$1,870,657,995	$2,005,010,884
Exc. of exports	$400,343,914	$359,775,282	$544,822,853

"As stated above, there is little evidence in the aggregate export totals of a reaction in the foreign demand for our goods, but when the detailed statement of exports of leading products for October and the ten months is closely examined, there are some features that may presage a turn in the tide of foreign demand. Thus the total value of the exports of six leading products in October is $147,831,262, a gain of $13,918,000, or about 10.3 per cent. Deducting the total value of six leading

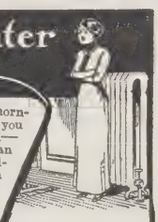
Does Your Heater Run You



—make you look after it from early morning till late at night—sometimes keep you roasting hot, more often freezing cold—and all the time burning more coal than is necessary. This condition can be avoided by equipping your heating plant with the Jewell Heat Controller. With this simple, economical device your heater must actually run itself. All that is necessary is to occasionally put in a little coal. The JEWELL automatically takes care of drafts and dampers and keeps an even, steady fire that gives you an even heat at any temperature desired—with the minimum amount of coal.

The clock attachment assures a warm house in the morning but keeps it cool over night.

By the use of the JEWELL, heating troubles and worries are not only abolished, expensive coal bills are not only reduced, but changes in temperature are avoided, making the JEWELL indispensable for health and comfort.

THE JEWELL HEAT CONTROLLER

Write for Literature — How to Solve Your Heating Problem and we'll also send you the name of the dealer at whose place you can see the JEWELL in actual operation.

Jewell Heat Controllers are attractive, an ornament to any room, come complete, ready to set up—may be applied to any system of heating—and guaranteed to give efficient service. Write for particulars.

NATURAL GUANO CO., 807 River St., Aurora, Ill.

products for October from the total of all exports, however, it is found that the remainder, representing other exports, largely manufactured goods, is only $123,757,464, a gain over last year of but 2.5 per cent. Thus the gain in manufactured exports is far less than the gain in leading exports, which include raw cotton, breadstuffs, meat, and oils. In the ten months of this year gains in exports of these leading products have been exceeded by the gains in other exports, but the October figures alone do not show the maintenance of this gain. In this connection it will be interesting to compare the showing of exports for October and the ten months in leading as opposed to other exports, made in the following table:

Exports by groups	*October,* 1913	*October,* 1912	*Changes, per cent.*
Breadstuffs	$13,324,894	$26,103,001	D. 48.9
Cotton-seed oil	887,245	1,061,557	D. 16.3
Cattle, hogs, and sheep	80,835	63,769	I. 26.7
Meat and dairy prod	11,109,101	8,663,600	I. 28.2
Cotton	107.375,197	88,689,663	I. 21.0
Mineral oils	15,053,990	9,331,761	I. 61.3
Total above	$147,831,262	$133,913,351	I. 10.3
Other exports	$123,757,464	$120,720,153	I. 2.5
All exports	$271,588,726	$254,633,504	I. 6.9

	Ten mos. ending October, 1913	1912	*Changes, per cent.*
Breadstuffs	$170,218,665	$108,336,191	I. 57.1
Cotton-seed oil	14,158,854	16,702,509	D. 15.2
Cattle, hogs, and sheep	754,234	3,469,099	D. 78.2
Meat and dairy prod	115,425,883	104,714,015	I. 10.2
Cotton	389,809,428	421,582,031	D. 7.5
Mineral oils	121,760,483	100,510,620	I. 21.1
Total above	$812,127,547	$755,314,465	I. 7.5
Other exports	$1,192,883,337	$1,115,343,530	I. 6.9
All exports	$2,005,010,884	$1,870,657,995	I. 7.2

"It will be seen that the gain in cotton exports in October was $18,686,000, or 21 per cent., while the gain in oil exports was $5,727,000, or 61 per cent., and the gain in meat exports was $2,446,000, or 28 per cent. In breadstuffs exports, however, there was a loss of $12,779,000, or fully 49 per cent. The large gain in cotton exports was entirely a matter of price, because the quantity shipped was a trifle less than a year ago in October. For the ten-months' period cotton exports have lagged, owing to the decrease in shipments early in the year growing out of the 2,000,000-bale smaller crop yield of 1912, while breadstuffs, meat, and oil exports have expanded heavily.

"Enough has been cited here to show that foreign-trade figures from now on will repay study, especially in view of the reports of slowing down in European trade, and of the possible effects upon our own trade of lessened buying ability abroad, alike for our farm products and for manufactured goods."

BONDS AS INVESTMENTS FOR BUSINESS MEN

E. W. Keever contributes to *Moody's Magazine* an article in which he insists on the great value of high-grade bonds as investments for the surplus of a business man, because in an emergency they exist as "liquid assets." Profits put back into a man's business, as they so often are, unlike bonds, are subject to business risks, and in times of stringency may cease to be profits at all. Mr Keever says further:

"Let us suppose the manufacturer makes a net profit of ten thousand dollars on the raw material he has purchased and turned into the finished product. Now, if he takes that $10,000 and puts the whole amount back into more raw material, it is no longer real profit, because he is subjecting it to all the risks of the business. It is simply

so much working capital. The only re
true profit that he can go home at nig
and tell his wife about is that portion of
$10,000 that he takes out of his busin
and invests in something entirely outs
of it. The inexperienced may not beli
this statement, but ask the man who
been in business for twenty years and
seen two panics, and he will tell you t
his real profits, the ones he expects to
on in old age, are those sums invested
outside things, such as life-insurance,
estate, or bonds. And of these three fo
bonds are by far the best for the inv
ment of business surplus. They are n
marketable than real estate; if caref
chosen they are equally secure, and
collateral for loans they are unsurpas

"This brings us to the consideratio
the more immediate benefits of bonds
commercial reserve. The man who
a surplus in bonds has an insurance
against unforeseen disaster. If a s
temporarily ties up his plant, or a ne
vention compels large expenditures
improved machinery, he can resort t
commercial reserve for the necessary f
He has always on hand liquid assets w
value is not in the least affected by
state of his business. Under modern
ness administration the practical in
tance of such a fund is evident.

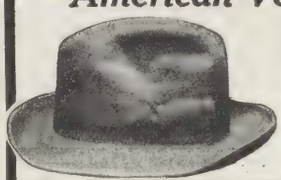
"A further advantage of comm
reserve arises in periods of business ov
pansion. There are times when the
chant sees opportunities to buy at a
discount for cash. The seller must
money at any price. Such opportu
usually come when money is tight
credit strained. The merchant is ca
his full line at the bank, and it is impo
to float commercial paper. At such
his bonds are worth all they cost. H
at once take them to any bank, and b
80 to 90 per cent. of their market valu
thus buy up his bargain. It is simpl
he has cash and the other man hasn'
'real money talks loudest every time

"A striking example of the valu
commercial reserve when such op
nities present themselves is seen i
history of the Standard Oil Compan
of the chief causes of whose wo
success has been the consistent m
nance of a big reserve in cash and
negotiable securities. By means of
reserve the Standard Oil Compan
been able to get into new oil-fields w
competitors were handicapped by l
cash, and to take over competitors wea
by lack of capital, and to impro
position in many other ways.

"*Bradstreets'*, in their January ana
the business failures in the United
during 1912, credit 29.7 per cent. o
failures to 'lack of capital' and 1
cent. to 'specific conditions.' Out
total of 46.2 per cent. due to these
a respectable percentage is evident
to the bankrupt concerns failing t
the quick assets to meet their quick
tions. Nothing but cash will mee
obligations, and bonds are th
form of carrying this very desirab
of quick assets with which t
contingencies.

"The ideal investment of a com
reserve would consist of high-grade railroad bonds, either a first or general mortgage. These bonds should be purchased under par, should have a ready market, either on the Exchange or among the investment houses, and should mature in from ten to fifteen years or less, so as to insure stability. Equipment bonds are one of the best types for investments of this character. To the above securities might be added some of the better public utilities, which, as a class, show very steady earnings and fluctuate but little in price, and a good percentage of high-grade short-term notes."

American Velours



Just being shown in the largest metropolitan stores. Cheery, refined and distinctive. Made of fine American velour; in Dark Blue, Steel Gray, Dark Brown, Black. Leather sweatband; silk band bow at side (again the most correct thing).

Of regular $3 grade. We ask $2.00 PREPAID. Money refunded if hat fails to please. Order NOW, enclosing $2 and stating size and color. Our catalog illustrates distinctive hats and caps for every occasion—saves you money. Write for it—free.

his column, to decide questions concerning the correct use rds, the Funk & Wagnalls New Standard Dictionary is lted as arbiter.

aders will please bear in mind that no notice be taken of anonymous communications.

. C.," Colorado Springs, Colo.—In answer inquiry concerning the phrase, "hard up," in LITERARY DIGEST for October 25, 1913, ence was made incorrectly to the nautical of this phrase when applied to the tiller—far as it will go,' that is, to the limit of its ment (*on one side or the other*)." The italiwords are incorrect. In nautical usage l up" is the same as "hard aweather," designates "a position of the helm or an to put the helm over as far as possible *d the wind.*" The opposite term is "hard " or "hard alee," which designates the on of the helm, or the order to put the over, as far as possible in the direction *from the wind.*

. W.," Springfield, Ohio.—"Kindly give e pronunciation of 'Cafeteria.'"

Italian spelling of this word is *caffettiera*, nced kaf"fet"tyār'a (first *a* as in *artistic*, cond as in *fare*, and the third as in *sofa*); anish spelling is *cafetera* and this is pro-d ka"fē"tār'a (the *a*'s have the same sound ed above and *ē* has the sound of "e" as in

S. Z.," New York, N. Y.—"Which of the ng sentences is correct? 'The Committee ' or 'The Committee *are* here.' What s proper to use with a collective noun, r or plural?"

nittee is a collective noun. It is to be as singular or as plural in accordance e idea it is used to express. According NEW STANDARD DICTIONARY (under "collective nouns are followed by verbs onouns in the singular or in the plural ng as they are regarded collectively or tively. In the sentence, 'There *was* a ongregation,' the assembly is spoken of ely, as a whole. If the word is used tively, that is, if anything suggests the the component *individuals*, a plural verb e used, as in the sentence 'The congrega- not all of the same opinion.' In the case we feel that the committee *is* present as ittee, not as several members of a com- One would say "The committee *is* n," because the being in session is a of the committee as a whole and not of that member of the committee. But we y "The committee *are* unanimously of on," because unanimity implies action on of the members as individuals."

I. H.," Chicago, Ill.—"Will you kindly e as to the correctness of the sentence, *tents* of the car *was* refused'? Several haintain that the word 'contents' is a noun and takes the singular form of while others agree with me that 'con- a plural word, and the sentence should *contents were* refused.'"

nce the seventeenth century has "con- en construed as a singular. To this day, n, it has been construed as a plural. *tent is*"; "The *contents are*," etc.

G.," New York, N. Y.—The plural nd *monies* are both used. The NEW STANDARD DICTIONARY prefers the former.

"C. A. B.," Hamilton, Ohio.—"Which of the following sentences is correct? 'We have referred the matter to our New York house, *who* has charge of the territory, and have asked them to confer with you at once,' or 'We have referred the matter to our New York house, *which* has charge,' etc. 'The First National Bank has for collection your note,' or 'The First National Bank *have* for collection your note.'"

Use the relative "that" instead of *who* or *which*—"Our New York house that has charge," etc. As the words "The First National Bank" denote a single institution, "has" should be used, *not* "have."

batching, automobiling, baseball. The Chicago Cubs have winter training quarters in grounds; will play match games during Feb. and March with Philadelphia Athletics and St. Louis Browns. Four days' carnival in Feb., rivaling New Orleans Mardi Gras and St. Louis Veiled Prophets. Northern servants. Grounds consists of 42 acres of luxuriant tropical shrubbery and flowers, beautiful palm fringed walks, fountains and shady nooks, facing the Hillsborough river, where boating and fishing are unexcelled. Over a hundred miles of well paved auto boulevards, creating beautiful drives through golden fruit-ladened orange groves, over picturesque streams, through tropical jungles and piney woods. All trains and boats met by autobus. Special rates for families and long stays. Write for booklet and rates to W. F. ADAMS, Manager. Spend a few days at the MANIVISTA HOTEL on the Manatee river.

An agreement whereby all the 14,000 employees shall be retained, even if part time becomes necessary, is reached in the General Electric strike negotiations at Schenectady.

Mayor Shank, of Indianapolis, threatened with impeachment if labor troubles increase, resigns on hearing fresh strikes are probable.

December 1.—One hundred and thirty-five persons were killed in 21 States during the hunting season, Wisconsin being the chief sufferer.

December 3.—General Zelaya is freed by the Federal authorities in New York City when the Nicaraguan Government withdraws a homicide charge on which he was arrested.

Twenty-seven men are burned to death in a cheap lodging-house in Boston.

The Most Pleasing Gift

You Can Give a Man Isn't Always the Most Expensive

For instance—there are few things which give *greater pleasure* than a pound jar of famous TUXEDO tobacco. The comfort, enjoyment and inspiration smoking gives a man are *beyond price*, and TUXEDO meets *every requirement* of the most *critical* smokers in the world.

Try it this year—giving humidors of Tuxedo—instead of the gifts bought *desperately*, when you "just don't know what to give that man." He'll welcome it with a genuine pleasure few gifts bring and time and again be gratefully reminded of the giver, in the evening hours of ease, restfulness and dreams.

Whether it's dad, brother, or someone's else brother, it's all the same—the *happiest* gift you can make any smoker.

Tuxedo

The Perfect Tobacco for the Pipe

TUXEDO is made from the finest, mildest leaves of high-grade Burley tobacco, carefully cured and aged so that it burns *slow* and *cool*, with delightful flavor and aroma.

Tuxedo has the advantage—over other tobacco—of the exclusive, *original* "Tuxedo Process," which *absolutely* prevents "tongue-bite." TUXEDO has been endorsed by hundreds of distinguished public men as the *one perfect tobacco*.

A pound humidor of TUXEDO is a generous quantity, many, many pipefuls. The Humidor Jar keeps it *fresh* and *moist* to the last pipeful. Nor is that all! Kept in an air-tight receptacle like this handsome jar, TUXEDO mellows and grows smoother and smoother, more and more delightful, until the last crumb is gone.

YOU CAN BUY TUXEDO EVERYWHERE

Glass Humidor Jars in two sizes, 50c and 90c

Famous green tin, with gold lettering, curved to fit pocket **10c**

Convenient pouch, *inner-lined* with moisture-proof paper - **5c**

THE AMERICAN TOBACCO COMPANY

Reproduction one-third size of Jar.

A VISION

of your car,

smashed on the slippery curve ahead——

You have neglected to put on Weed Chains.

You anxiously view the slippery curve ahead and have ***a mental picture of your car smashed against a rock.***

Why nurse anxiety and coax calamity—why take such chances when you know

Weed Anti-Skid Chains

Absolutely Prevent Skidding

No other device has ever been invented that takes the place of Weed Chains. All kinds of "make-shifts" have been tried—useless and worthless all. The ***real value*** of Weed Chains has been proven so often and so satisfactorily during the last ten years that there is no room for argument. They are slipped on in a moment without a jack. ***They don't injure tires*** even as much as one little slip or skid. ***They never fail*** in an emergency and take up hardly any space when not in use.

Send for Booklet proving the efficiency, economy and necessity of Weed Chains.

Drunk On Coffee

About 15 centuries ago an Arab herder of goats driving the flock through some new country was alarmed at the antics of the animals and thought they were "possessed of the devil."

Each day the same thing occurred after the goats had eaten of a certain kind of berry. The goatherd thought he would eat a few to try the effect.

That was the discovery of coffee.

Arabs learned to brown the berries and boil them, drinking the liquor, which was then and now recognized to have a direct action on the heart, and of course the reaction and depression later on.

Coffee sets up a partial congestion of the liver; dulls the brain; wrecks the nerves, and interferes with digestion.

Anyone can easily prove whether it be coffee that causes the periodical headaches, sick stomach, bowel troubles, weak heart, kidney complaint, weak eyes, neuralgia, rheumatism or nervous prostration.

Simply leave it off entirely for ten days and have a rich, piping hot cup of **Postum.**

If you find, in a day or two, that you are getting better, that's your cue, follow it straight back to health, comfort and the power to do things.

Postum now comes in two forms:

Regular Postum — must be well boiled.

Instant Postum is a soluble powder. A spoonful dissolves in a cup of hot water, and with sugar and cream makes a delicious beverage ***instantly.***

"There's a Reason" for Postum

These great artists come to your home Christmas with the Victrola

Five hundred feet of porches at Grove Park Inn

The Finest Resort Hotel in the World has been built at Sunset Mountain, Asheville, N. C.

Open all the Year *Absolutely Fireproof*

Mr. E. W. Grove, of St. Louis, Mo., has built at Asheville, N. C., the finest resort hotel in the world—Grove Park Inn. Built by hand of the great boulders of Sunset Mountain, it is full of rest and comfort and wholesomeness. The front lawn is the hundred-acre eighteen-hole golf links of the Asheville Country Club, and with it sixty acres belonging to the hotel.

The purest water obtainable is piped seventeen miles from the slopes of Mount Mitchell, over 6000 feet altitude.

Biltmore milk and cream exclusively—supplied from 200 registered Jerseys on the estate of Mr. Geo. W. Vanderbilt. It is doubtful if this famous dairy is equaled in the world.

Four hundred one-piece rugs were made at Aubusson, France. Seven hundred pieces of furniture and over 600 lighting fixtures of solid copper made by hand by the Roycrofters.

The plumbing material is the finest that has ever been placed in any hotel in the world. Bath tubs and fixtures all solid porcelain. No pipes visible anywhere. No radiators seen—all in recesses under windows. No electric bulbs visible.

The "Big Room," or what some call the lobby, is 80 by 120 feet, and is probably the most unique public room in the country. Two great fireplaces in it will burn twelve-foot logs.

For the golfers there are lockers and shower bath rooms with a 40-foot swimming pool not excelled by the finest clubs in existence and the players are less than 100 yards distant on the links.

Situated amid the most inspiring mountain scenery, Grove Park Inn offers the finest combination of climate, comfort and happiness that we believe has ever been made possible.

Especially available for northern guests in the Spring, Fall and Winter, going and returning from farther southern resorts, or for an all Winter resort. Persons with any form of tubercular trouble will not be received at the Inn.

Rates—American Plan —$5.00 a day upward

Write for Booklet "A"

Full information and literature may be obtained at 50 Southern Railway Offices, United States and Canada.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 354–360 Fourth Ave., New York

VOL. XLVII., NO. 25 NEW YORK, DECEMBER 20, 1913 WHOLE NUMBER 1235

TOPICS OF THE DAY

THE PRESIDENT AND THE SUFFRAGISTS

IT WAS SOMETHING of an achievement for President Wilson to refuse the requests of a delegation of woman suffragists without giving them the slightest inkling of his own attitude toward their cause, even his political foes acknowledge. Some of them, however, consider it a mere clever "dodge," and his stanch friend, the New York *Evening Post*, even calls it "absurd." According to another friendly paper, the New York *World*, the President's visitors were "properly rebuked." Yet their leader calls the interview "all that we could ask for." The fact is, declares the critical Rochester *Democrat and Chronicle*, that President Wilson's "meaning was so artfully concealed that some of the women were encouraged, some were disappointed, and some, like Mrs. McCormick, who said that she needed time 'to think' before making any comment, were so dazed that they were unable to form an opinion." The President's refusal to urge equal suffrage upon Congress, continues the Rochester daily, "was couched in such terms that it is impossible to say whether he is in personal sympathy with the suffrage movement or with the opposition, his refusal being based upon the ground that 'I am not at liberty to urge upon Congress, in messages, policies which have not had the organic consideration of those for whom I am spokesman.'" This statement of the President's has to Washington correspondents "a broader significance than its mere relation to the suffrage question." As the New York *Sun's* representative believes, "it commits Mr. Wilson to the policy of recommending to Congress in the next three years only such subjects as are included in the Baltimore platform." This "is a departure," we are reminded, from the custom of President Roosevelt and President Taft.

Photograph by G. V. Buck.

"I WAS DREADFULLY FRIGHTENED MYSELF, AND I DO BELIEVE HE WAS AS MUCH FRIGHTENED."

But Dr. Anna Howard Shaw says she is satisfied with her interview with President Wilson, tho she is sorry he failed to link his name with Lincoln's by official advocacy of the enfranchisement of women.

The fifty-five suffragists who called on President Wilson in the White House last week were a delegation from the recently adjourned Washington convention of the National American Woman Suffrage Association. Dr. Anna Howard Shaw, president of the association, was their head and spokesman. The President paid the strictest attention, say the dispatches, while she asked him, on behalf of the women citizens of the republic, to ask Congress for an equal-suffrage amendment to the Federal Constitution, or, failing in this, to "use the Administration's power" to secure the appointment in the House of Representatives of "a committee corresponding with the Suffrage Committee in the Upper House, before whom we may go, a committee which has leisure to examine our subject, a committee which can give it its time."

The President's brief speech in reply "is of wide application and interest," observes the New York *Evening Post's*

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 354–360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

Washington correspondent, "because it does not apply solely to woman suffrage, but to all of the various movements and propaganda which send delegations here, or have conventions here, and seek to induce the White House to take up their cause and make recommendations to Congress." To quote a portion of what Mr. Wilson said:

"I set myself this very strict rule when I was Governor of New Jersey and have followed it as President, and shall follow it as President—that I am not at liberty to urge upon Congress, in messages, policies which have not had the organic consideration of those for whom I am spokesman.

"In other words, I have not yet presented to any legislature my private views on any subject, and I never shall, because I conceive that to be part of the whole process of government that I shall be spokesman for somebody, not for myself. It would be an impertinence. When I speak for myself, I am an individual; when I am spokesman of an organic body, I am a representative.

"For that reason, you see, I am by my own principles shut out, in the language of the street, from 'starting anything.' I have to confine myself to those things which have been embodied as promises to the people at an election. That is the strict rule I set for myself.

"I want to say that with regard to all other matters, I am not only glad to be consulted by my colleagues in the two houses, but I hope they will often pay me the compliment of consulting me when they want to know my opinion on any subject.

"One member of the Rules Committee did come to me and asked me what I thought about this suggestion of yours of appointing a special committee of the House, as the Senate has already appointed a special committee, for the consideration of woman's suffrage, and I told him that I thought it was a proper thing to do. So that, so far as my personal advice has been asked by a single member of the Committee, it has been given to that effect. I want to tell you that to show that I am strictly living up to my principles."

"When he told us that," says Dr. Shaw, in a New York *Tribune* interview,

"I inquired if I might ask him a question. He said I might. I said: 'Mr. President, since you can not present our case to Congress, and since we have no committee in the House, who is to speak for us there?' He returned laughingly that he had found us well able to speak for ourselves, whereupon I said: 'But not authoritatively. Have we any one, Mr. President, to present our case with authority to Congress?' He hesitated a moment, the muscles of his face twitched; I was dreadfully frightened myself, and I do believe he was as much frightened; but he didn't evade the question; he answered squarely, 'No.'

"And to my mind that 'No' was the most important thing in the interview."

After leaving the White House, Dr. Shaw said optimistically of the visit:

"It was all that we could ask for. He is in favor of a committee of the House; that was our chief purpose in coming to see him."

Yet the leader of the suffragists is sorry—"more for Mr. Wilson's sake than for ours"—"that he has not had the courage to speak out for our enfranchisement, and I am the more sorry because I think that he believes in it. He could not have written the words he has written in 'The New Freedom' and not believe in it." The nearest thing to an official suffrage reply to President Wilson's speech is contained in this little argument, with which Dr. Shaw concluded her statement:

"I think he is mistaken in considering himself the spokesman of his party. He should be the spokesman of his country now. Moreover, would he not speak for his party in speaking for suffrage? His total vote in the last election was 6,292,718. Half of this is 3,146,359. Now, in the ten States where women vote the total Democratic vote is 1,577,254. In the campaign States, North Dakota, Montana, and Nevada, where the suffrage bill has passed the legislature stage and is before the people, the total Democratic vote is 65,112. In Iowa, New York, and New Jersey, where the bill has passed one legislature, the total Democratic vote is 1,010,938. A suffrage bill has also passed Democratic legislatures in Wisconsin and Missouri. Count these totals up and you will find that the Democratic vote in States where women have the ballot or where the legislature is Democratic and has shown itself for woman suffrage amounts to 3,148,660, or more than half the Democratic vote in the last Presidential election.

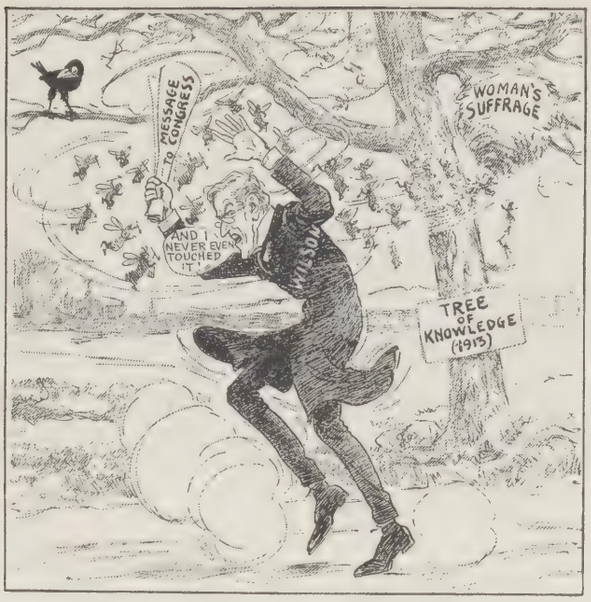
"Is Mr. Wilson representing the majority of his party, therefore, when he declines to speak for enfranchisement of women?"

So the suffragists are concealing any disappointment they may feel and speak of the President most kindly. The good feeling may not extend to his party, however, hints Miss Alice Paul, chairman of the suffragists' congressional committee—"we are going to turn the votes of millions of women and the influence of many more against the Democratic party in the next election, unless that party changes its mind on the question of suffrage."

But opposition editors are not willing to let Mr. Wilson off so easily. The incident brings from the Rochester *Democrat and Chronicle* (Rep.) the admission that "if adroitness in dodging awkward questions is a proof of political ability, then Woodrow Wilson is one of the ablest politicians the country ever produced." In the Indianapolis *Star's* (Prog.) opinion, "the President 'wabbled,' not to say quibbled, in his talk to the women." The New York *Press* (Prog.) wonders at the "novel doctrine" expounded by the President, and inclines to the view that with "the suffragettes" he was perhaps "not so modest and retiring as politic and calculating." No less critical is the New York *Evening Post* (Ind.), friend of equal suffrage and strong supporter of the Administration. It does not want to call the President's courteous speech a "dodge," but—

"it does not square with what we believe to be the sound conception of the Presidency as an office in which initiative and leadership are essential. For that matter, it does not square with President Wilson's own practise. No Executive has been more insistent or more successful than he in impressing his personal views upon Congress; and we take it that he would not make a quibbling distinction between doing this in a public message and in earnest interviews with members. Mr. Underwood, for example, stated on the floor of Congress that free sugar and free wool were written into the Tariff Bill at the express request of Mr. Wilson. He might perhaps say that this was only his development of the 'organic consideration' given to the tariff in the Democratic platform. But take another case. Last week he urged Congress to enact a Federal law for Presidential primaries. What organic consideration, of which he is the obedient spokesman, had his party given to this subject? The Baltimore platform favored Presidential primaries, but only 'through legislation in each State.' The Federal scheme is off Wilson's own bat. It is entirely right that he should recommend to Congress whatever he thinks best for the country. The only question is whether it is right for him to say that he can not unless it has been previously considered by his party. To state that position is, in our opinion, enough to make it appear absurd."

In contrast with this is the attitude of the New York *World* (Dem.), which, not content with praising the President, undertakes to scold the suffragists who went to the White House "truculently with preliminary demands and menaces which were out of place and not much to their credit." They were "properly rebuked" by the President, who, adds *The World*, "gave his callers a primary lesson in party and popular government, and, as is customary with him, he imparted the instruction courteously as well as pointedly. The appeal of the suffragists must continue to be to the people." The opinion exprest in the last sentence from the *World* editorial is shared by other editors, who have no objection to the women's activity at Washington. The suffragists, explains the Springfield *Republican*, understand politics, "agitate methodically," and realize that "one way to agitate is to press along all possible avenues of approach." Yet *The Republican* concludes, as do the New York *Evening Sun* and Pittsburg *Dispatch*, that "the most fruitful field for the suffrage movement for some time to come



THAT'S WHY!
—Heaton in the Chicago *Inter Ocean.*

"NEVER 'START ANYTHING,' JOHN."
—Carter in the New York *Evening Sun.*

THE PRESIDENT AND THE SUFFRAGISTS—TWO VIEWS.

must be in the States; and along State lines the most rapid advance can be made." Nor does the Washington *Post* see how the suffragists could expect President Wilson to become their leader when so many of the women of this country are opposed to suffrage.

"OBSERVING" ELECTIONS IN SANTO DOMINGO

A HINT of the embarrassments and rebuffs that may lie in wait for Uncle Sam in his rôle of champion of constitutional government in America is afforded by Santo Domingo's protest against the presence of American "observers" at her polling-places during this week's elections. It will be remembered that, in his efforts to restore order in Santo Domingo last summer, Minister Sullivan told the revolutionary leaders that if they would turn their attention from bullets to ballots they might "count upon the aid and support of the Government of the United States to assist them in their efforts to lead the country to a condition in which the will of the people may be registered by an honorable ballot taken in an election properly regulated." But just as Mr. Sullivan's endeavor was apparently crowned with success, the fighting began again, and continued until a number of Government victories moved the revolutionists to arrange terms of surrender. In granting these terms President Bordas also promised a free election.

As the election approached and it was rumored that the United States Government was sending a "commission" to "supervise" the event, Dominican indignation over this alleged violation of the country's sovereignty found expression in mass-meetings in Santo Domingo City and in a protest by the President. Replying through Minister Sullivan, Mr. Bryan assured President Bordas that the Americans sent to visit the principal polling-places would be there,

"not as a 'commission' for which this Government asks any official recognition, but only as individuals, to lend moral support by their presence to the efforts which President Bordas has so fully pledged himself to make that the elections shall be free and uninfluenced in every respect, and in order that, if any questions should arise as to the good faith of any one concerned, undeniably impartial witnesses may be available to bear testimony as to exactly what happened."

The Administration's course in seeking to give these "observers" an unofficial status, remarks the Washington correspondent of the New York *Sun*, "is only another application of the principle on which the Lind mission to Mexico was based." And he goes on to say:

"It is believed here that the step in Santo Domingo is only the first attempt of the Wilson Administration to make practically effective its championship of constitutional government in Latin America.

"There is a general conviction that the action in the present situation will prove to be an entering wedge for even more advanced courses in other Latin-American countries where similar conditions prevail."

And in the Washington correspondence of the Boston *Transcript* we read:

"The Dominican situation has been extremely unsatisfactory ever since the murder of President Caceres two years ago. Only last year a special commission went from the United States and arranged for the retirement of the Victoria Government, and the setting up of a provisional government. Even this did not last, and another revolution took place last summer. It was strangled by notification to the rebels that the United States would not recognize any Government set up by them or give it the customs receipts of the Republic, which are collected by the United States, and also by Mr. Sullivan's assurance of a fair election this fall if the fighting were stopt. Persons here familiar with the Dominican situation are hopeless over the attempts to impose constitutional government upon a country of 600,000 inhabitants, 90 per cent. of whom can not read or write, and in which there is but one road, thirty miles long, just built by the United States."

The Dominican grievance is touched upon in the following interview with José M. Nouel, who was Santo Domingo's Secretary of State during the administration of his brother, ex-President Nouel:

"Santo Domingo does not want a father who is always scolding. A child will not stand scolding all the time. What my country needs is beneficial protection by the States. . . . . .

"We admire the United States as a great nation, but we wish the United States to be friendly and not to interfere.

"The majority of the commissioners sent to Santo Domingo by the United States do things which they can not possibly be authorized by the Government to do. Instead of complying with diplomatic orders, they make commercial transactions. It is this that has caused the indignation against the commissioners in Santo Domingo. . . . . .

"Instead of getting a beneficial protection, the people of Santo Domingo are being humiliated. The United States has no right to revise or regulate elections there. The convention between this country and Santo Domingo does not authorize intervention in the internal affairs of the latter."

While attaching little importance to the Dominican protest in itself, the Charleston *News and Courier* points out that "as a symptom it is decidedly interesting." For—

"It is to be feared that much the same disposition is going to be evinced by other Latin-American countries similarly circumstanced. For some years, at any rate, our good intentions are not going to save us from abuse. In international affairs, as in private life, regulation of one's neighbors is a thankless task."

NEW ENGLAND'S MISSING DIVIDEND

IT MAY BE BETTER, after all, to pass a dividend than a danger-signal, as one writer suggests, yet last week's action of the board of directors of the New York, New Haven & Hartford Railroad probably aroused more consternation in New England than any wreck that ever occurred on the road. For New Haven shares, widely held by thousands of small investors, had regularly paid large dividends for forty years and had come to be looked upon as "the very rock of financial stability." More than 10,000 of the road's 23,968 stockholders are women, 9,000 more are individual men. And their "yearly incomes from this source, generally small," notes the New York *World*, are now cut down to nothing at all, "and large numbers of them have doubtless thereby been brought face to face with want at the start of the winter." This, adds the New York *Journal of Commerce*, "with the fact that the stock, which stood at 225 ten years ago and was paying 10 per cent., is down to about 70 in the market, is a humiliating position."

Yet the Springfield *Republican*, speaking with all the authority of its position in the center of New England and of its long knowledge of the New Haven Road and the public it serves, calls the directors' decision to pass the quarterly dividend "the most businesslike act of that board in a decade." It further contends that the act conserves "the larger public interest" and will in the end benefit the stockholders of the road and all New England. And a large stockholder quoted in the New York *Sun* considers his stock "worth more to-day because the dividend was passed than it would have been if the dividend had been paid." Even Mr. Louis D. Brandeis, the arch-critic of former New Haven managements, is heard to say, after hearing this dividend news, "The New Haven is in competent hands."

Mr. Howard Elliott, the New Haven's new executive, declares that he never "sat on a board of directors that felt so badly" as did the New Haven directors who "took away the dividends which would have come as Christmas presents. They had the courage to take that position because they knew it was for the good of the stockholders, the road, and the public at large." In the official statement issued in justification of the directors' decision, the New Haven is called "a strong company, owning valuable property, real estate, and securities worth many millions of dollars." But it is difficult to realize on these assets just now, "and the directors believe it is unwise to attempt to do so until general conditions are better." Figures are given showing that the total income at present available "is required for working capital." Furthermore, the result of the arbitration of recent wage disputes will mean an increase of expenses for the coming year, as will also "the improvements to which the company is already committed." "The directors feel, therefore, that the welfare of the company, of its stockholders, and of the territory served by the various lines will be conserved better under all the conditions now confronting the company, by not declaring at this time a dividend."

As already noted, this reasoning seems perfectly sound to the Springfield *Republican*. It says:

"To go on paying dividends that are not earned would wreck any business enterprise, the humblest or the most colossal. The New Haven has been doing this very thing for some five years, in the vain hope that there would be a turn in the tide, but the hour had come to abandon 'high finance' and apply plain, old-fashioned business principles to the great problem confronting the property.

"How distressing this event must be in the homes of thousands of stockholders in New England, who had been taught to regard New Haven shares as the very rock of financial stability, is a poignant feature of the situation. Trust funds, estates, and family inheritances without number have for a generation been based on the assumed soundness of this security. This fact alone caused the company's directors to continue paying the old 8 per cent. dividend long after the road had ceased to earn it."

But, continues *The Republican*, whatever the shock to the community, "still, New England must profit by the fact that the income of the road formerly diverted to the stockholders will now be used to save the road from a receivership." The fixt charges can be met, it believes; "there will be no physical deterioration of the property," and, once rid of certain incubi, the New Haven, by itself, "remains one of the most intrinsically sound railroad properties in the United States." If the stockholders keep their faith in it and look upon this episode "as, in reality, the heralding of an era of conservative and honest and lawful upbuilding, they will see the end of these troubles sooner than, in the depression of the hour, they are disposed to believe."

Not that all comment is so soothing in tone. At a dinner last week, and in the presence of Mr. Elliott, of the New Haven, who had a few things to say about governmental unfairness to the railroads, Gov. James M. Cox, of Ohio, declared:

"The whole country stands appalled to-day at the developments in the affairs of the New Haven. A great property builded on the resource, thrift, and pioneer morals of New England has been drained of its very blood and bone through methods that inspired the divine command, 'Thou shalt not steal.' . . . . . .

"It should have been impossible to accomplish in any progressive State. I feel sure the Federal Government in its present hands will not remain dumb to the constitutional command of absolute control over interstate commerce."

The New York *World* is with Governor Cox. In a characteristic editorial excoriation of the New Haven's owners, it predicts that "the looting of the New Haven, together with the 'Frisco scandal," will give to the country a new interstate-commerce law. It believes that "Congress can not long defer legislation that will enable a Federal commission to regulate railroad capitalization as effectively as the Federal authority now regulates rates." For "it is folly to try to control rates without controlling capitalization."

The New Haven was not long ago rather thoroughly investigated by the Interstate Commerce Commission, but more trouble may be in store for it, if we are to believe rumors from Washington. In the New York *Sun's* correspondence, for instance, we hear that moves for a Congressional inquiry, prompted by the passing of the Christmas dividend, have been dropt owing to an understanding that the Department of Justice is considering the possibility of criminal proceedings.

Yet some think that the New Haven's plight calls for help, not prosecution. Nor does the New York *Globe* believe the New England road alone in its misery. Greater expenses and the decreased purchasing power of the dollar justify, we are told, the demand for higher freight rates. As *The Globe* puts it:

"The disease afflicting the New Haven is general among the railroads. Its financial anemia is intensified by Mellenism, but other railroads are also going white, and grave seems the need of the doctors of the Interstate Commerce Commission prescribing the only remedy that promises a restoration of health and normality."

PARCEL-POST CHEER FOR CHRISTMAS

A CHRISTMAS GIFT that appears to be widely appreciated is Postmaster-General Burleson's order increasing weight limits, reducing rates, and admitting books to the parcel post. Most of these changes will take place on January 1, a little too late for Christmas shoppers, but not too late to be a part of our Christmas cheer. For it is a sign that the parcel-post system "will be developed to its fullest use," thinks the Washington *Post*, and that "ultimately it ought to have the desired effect on the cost of living." "That such radical changes are to become effective one year after the parcel post was first put in operation is convincing proof" to the Philadelphia *Press* "of popular appreciation of this splendid public utility established by the Government." According to the Postmaster-General's announcement as summarized in the press dispatches, "the weight limit on packages to be carried in the first two zones—that is, to any point within 150 miles of their starting-place—will be increased on January 1 from 20 to 50 pounds." At the same time, "the limit of weight on packages carried in the third, fourth, fifth, sixth, seventh, and eighth zones, or to all points in the United States beyond the 150-mile limit, will be increased from 11 to 20 pounds." In the third, fourth, fifth, and sixth zones rates are reduced. Beginning next March, books are to be admitted to the parcel post. The rate on books weighing eight ounces or less is to be one cent for each two ounces (the present third-class rate); on those weighing over eight ounces the zone parcel-post rates are to apply.

In an editorial estimate of the effect of the changes the Philadelphia *Record* comes to the conclusion that "by increasing the weight limit in the 150-mile zones to 50 pounds, the parcel post will absorb two-thirds of the traffic hitherto carried by the express companies," while "a great volume of new business may be expected from the rural districts, which lie off the regular express routes, but which are articulated with the parcel-post service by the free rural delivery." *The Inquirer*, of the same city, observes that "at the present rate of progress it will not be a great while until the United States Government will have absorbed the parcel-carrying business of the country." These latest changes it looks upon as "only a partial application of the official program." "Eventually the Department expects to transport packages up to 100 pounds in weight from anywhere within the continental limits of the United States." And *The Inquirer* continues:

Copyrighted by the New York Herald Co.

HOW DID THAT EVER GET BY US?

—Rogers in the New York *Herald*.

"There is no doubt that this development of the service will be welcomed by the people, who have already shown such a hearty and general appreciation of the facilities in this connection with which they have been supplied, and if it puts the express companies out of business, as is not unlikely, those companies will only have themselves to blame for their elimination. . . . It was the rapacity of those companies, the insolence of their agents, the plundering extortion which they practised, that brought about the parcel post."

To many of our readers the chief interest in Mr. Burleson's holiday announcement lies in his admission of books to the parcel-post service. Their exclusion, says the Washington *Post*, "was without excuse"—

"The circulation of good books should be encouraged, rather than discouraged, by the Government, and yet it was not possible to send even a copy of the Bible by parcel post. A great many persons who have scarcely any use for the parcel post would have appreciated the service just to send a book occasionally to a friend. When they tried to send a book, and were told they couldn't, they wondered why the parcel post was established."

But not everybody is going to welcome the new parcel-post schedule, declares the New York *Commercial*, for it "will mean a heavy burden to the railroads, more competition for the express companies, and much more work for post-office employees throughout the country." President Peters, of the Long Island Railroad, chairman of the railroads' mail pay committee, insists that it will make things all the worse for the already complaining railroads. As the New York *Sun* reports his brief statement:

"There will be additional weight in the mails, but no additional compensation. The Government gets increased revenue, but takes away from the railroads' freight and express business. I think, however, that Congress will be fair and that provision will be made to pay the railroads adequately.

"We trust Congress to do the right thing. Carrying double the bulk in packages, the roads should certainly get more pay for so doing. It's all up to Congress. The railroads will have to go on carrying the parcel post anyway."

MINERS' UNION AS A "LABOR TRUST"

INDICTMENTS of union labor leaders in two States for violation of the Sherman Law are held by President Wilson to furnish sufficient vindication of his action in signing the Sundry Civil Appropriation Bill. Conservative Eastern papers, like the New York *Evening Post* and Brooklyn *Eagle*, are gratified to find that the "rider" in that bill refusing an appropriation for the prosecution of labor and farm organizations is not going to render these organizations exempt. Labor leaders, however, protest against the indictments as an unfair application of the law, and one never intended by its framers. President John P. White, of the United Mine Workers of America, is now on trial in West Virginia, the Chicago *Tribune* reminds us, charged with "conspiring to restrain trade and commerce," in connection with the recent West Virginia strike. In Colorado, he and Frank J. Hayes, vice-president, and William Green, secretary-treasurer of the union, have just been indicted for "maintaining a monopoly of labor." Other officials of the union are under indictment for conducting a strike in restraint of trade under the Antitrust Law. The Federal grand jury which handed down these indictments at Pueblo also prepared a long statement denouncing the methods of the United Mine Workers in the Colorado strike. These assertions, for instance, were made:

"The methods pursued by the United Mine Workers of America in their endeavors to force recognition of their union by the coal-mine operators in this State are an insult to conservative and law-abiding labor. They have brought experienced strike agitators and have armed hundreds of irresponsible aliens who have become a menace to the peace and prosperity and even the lives of citizens. They created open insurrection in Southern Colorado and have resorted to measures which all fair-minded labor-organizations repudiate. The officers in charge of many of the tent colonies confess their inability to control the men whom they have armed and aroused.

"Evidently no qualification is necessary for membership in

the United Mine Workers of America, other than a promise to pay dues, which are apparently used to support insurrection and lawlessness when necessary to force their demands by intimidation and fear whenever strikes are called, with the result of injuring other trades and the entailment of hardships and privations on the people of the entire Commonwealth."

Such methods of warfare, comments the Chicago *Tribune*, are "justly denounced"—

"No reputable labor organization can afford to tolerate such tactics on the part of even its lesser leaders. The right to strike does not carry with it the right to murder. The men who doled out weapons to the irresponsibles among the workers should be punished to the full extent of the law."

But, continues *The Tribune:*

"The wider charges against the heads of the United Mine Workers, the charges of conspiring to restrain trade and of maintaining a monopoly of labor, on which they are now tried in West Virginia and are to be tried in Colorado, might well raise doubts and questionings in the minds of the public. Should the calling and effective conduct of a strike be made a conspiracy in restraint of trade, should a strong union be declared a monopoly of labor, it will mean the death of trade-unionism. This is hardly to be desired. Trade-unionism pretty generally represents intelligence in the calling and settling of labor disputes. It represents progress, education, and orderliness even in the disorders arising between labor and capital. To crush unionism—and making it ineffective by means of undue legal restrictions is as good as crushing it—is but to deepen the chasm between capital and labor, to make class conflicts in this country more implacable."

OUR SECOND PEACE PRIZE-WINNER.

Senator Elihu Root, who is awarded the Nobel Peace prize for 1912, in consideration of his work for world-peace as Secretary of War and later as Secretary of State.

The indicted leaders, naturally, would protest more emphatically. And we quote from an editorial in *The United Mine Workers' Journal* (Indianapolis), which can fairly be considered as their mouthpiece:

"If any average citizen of these United States was asked as to whom the Sherman Antitrust Law was intended to curb, the immediate reply would naturally be: 'Such combinations in restraint of trade as are typified by the Standard Oil or other Rockefeller-Morgan-Guggenheim syndicates.'

"Events in Colorado would indicate that the 'average citizen,' as usual, is mistaken. At the instance of representatives of the very syndicates our average citizen honestly supposed the law was intended to curb, we find representatives of the workers indicted by a Federal grand jury for attempting to help employees of these syndicates to claim conditions that are supposed to be assured them by the laws of the State and of the nation.

"We have heard of 'Satan rebuking sin,' and here we have an instance of corporations whose violations of every law, State or Federal, have become notorious, invoking the law they openly ignore; applying it in a way the framers of the law never intended it should be applied, in order that they might continue their lawless ways, unobstructed. . . . . .

"We do not believe the law under which we have been indicted was ever intended to be used for the suppression of labor-unions.

"We have the records of expressions from the framers of the Antitrust Law distinctly stating that it was not."

ELIHU ROOT'S PEACE PRIZE

THE AWARD of the 1912 peace prize to Senator Elihu Root, of New York, by the Norwegian Committee, administrator of the Nobel Fund, seems eminently just to observers on this side of the Atlantic. The New York *World*, which does not always agree with Root the politician, but considers him "one of the few living statesmen of the first intellectual rank," says the prize is worthily bestowed. "Mr. Root," *The World* explains, "tho the ablest Secretary of War this country ever had, could justly win it by his pacification in Cuba and the Philippines, his management of the Japanese misunderstanding, and his services in behalf of international arbitration, because the American people had no ulterior purposes and he could give expression to the prevailing sentiment of a great nation." The New York *Evening Post* thinks the award was "undoubtedly well earned." The peace prize is worth $40,000, and Senator Root is the second American to be honored with it, Colonel Roosevelt being the first. On December 10, the day the award was announced, Senator Root was further honored by being appointed a member of the Court of Arbitration to which are to be submitted the claims of British, French, and Spanish subjects in regard to property confiscated by the Portuguese Government after republican rule was proclaimed. The peace prize for 1913 was given to Senator Henri La Fontaine, of Belgium, president of the Permanent International Peace Bureau at Berne, Switzerland. Reviewing Senator Root's work for international peace, the Boston *Transcript* says:

"His strong common sense, his statesmanlike views, and intimate knowledge of the springs of public action, prevented him from sharing the illusions which lead many pacifists astray. He did not believe that the golden age could be brought into existence by treaty or statute, but he was confident that the age of iron might be softened by nations agreeing to try arbitration, not as their last resort, but as their first. While he was Secretary of State he negotiated many arbitration treaties which were ratified because they were practical, because they did not attempt too much, and because they recognized the true scope of diplomatic negotiation and did not bristle with clauses challenging constitutional controversy.

"When the Senate stood out for what it regarded as its 'rights' as a treaty-making power, it was Secretary Root who persuaded reluctant President Roosevelt to concede the point of senatorial privilege as less important than the principle underlying the agreement. To him also in no small measure is due the credit for making our allegiance to the Hague Tribunal a vitalizing influence, not merely a 'pious aspiration.' His courage as a pacifist was high enough to induce him to undertake the application of peaceful settlement of grievances to the volcanic republics of Central America. He made a most hopeful beginning, which we regret to say was not respected by his successor.

"Mr. Root was peculiarly happy in his exposition of Monroeism as a peace-preserving agency for all Latin-American nations, and his tour of South America bore fruits all pacifists should remember. A great Secretary of War, a great Secretary of State, he was in both offices a great promoter of peace, who has come by his just reward."

At the Peace Society dinner in New York City as long ago as 1909, the New York *Sun* recalls, "Mr. Root was hailed by no less an authority than the Ambassador and First Delegate of the United States to the International Peace Conference at The Hague in 1907, Mr. Joseph H. Choate, as one who had done more to promote the peace of nations in recent years than any other living man."

GIVING AWAY A NATIONAL PARK

UNLESS President Wilson intervenes, San Francisco will find in its stocking a Christmas present from Congress worth, it is estimated, some $45,000,000, and the country in general will be poorer by a portion of the national domain. At least this is the way its opponents interpret the Hetch Hetchy Bill, which has now gone to the President for his signature or veto. Yet in spite of this the measure has merits which bring to it the support of a large section of the press and a majority in Congress. It is true that it met with more opposition in the Senate, where the vote was 43 to 25, than it did in the House, which passed it almost unanimously three months ago. This Bill, which is hailed by some as a triumph of sanity and justice over sentimentality, and denounced by others as a brazen and indefensible "grab," gives the city of San Francisco water-supply and power rights in the Hetch Hetchy Valley of the Yosemite National Park. Altho the matter has now been before the country for a long time, public opinion as reflected in the press seems as much divided as ever, not only over the rights and wrongs of this concession, but also over the facts involved. Even the conservationists are not of one mind about it, the rank and file of them being apparently against the bill, while Gifford Pinchot and other leaders champion it. As to the disputed facts in the case, we are assured, on the one hand, that damming the Tuolumne River where it leaves the Hetch Hetchy Valley is essential to the lives and health of San Francisco's 500,000 citizens, and, on the other hand, we are told that there are at least four sources of water-supply more available than this—but, unlike this, not to be had as a gift. We also learn from some authorities that the Hetch Hetchy scheme will deprive the settlers in the irrigated districts of the San Joaquin Valley of an adequate water-supply, while others assure us that the plan includes ample provision for the protection of these settlers' rights.

There is a nation-wide sentiment against this grant, declares the Boston *Transcript*, which characterizes it as "the most stupendous graft that has ever been authorized by any legislature, State or national," and calls upon the President to use his veto power. Moreover, continues *The Transcript*—

"It establishes a precedent that imperils all of the nation's wonders and resources. Is there a national park that is safe? Is there a national forest which may not be turned over to the lumbermen?"

"If this hydroelectric grab in the name of a city is consummated," declares the New York *World*, "virtually one-half of the great Yosemite National Park will be invaded and the scenic beauty of the Hetch Hetchy forever destroyed." And in the New York *Times* we read:

"Any city that would surrender a city park for commercial purposes would be set down as going backward. So far as we are aware, such a case is unknown. Any State legislature that would surrender a State park would set a dangerous and deplorable example. When the Congress of the United States approves the municipal sand-bagging of a national park in order to save some clamorous city a few dollars, against the protests of the press and the people, it is time for real conservationists to ask, What next?"

A number of papers, on the other hand, agree with the Washington *Post* that the passage of the bill by the House and Senate is a triumph of common sense over sentimentality, and the New York *Press* declares that the public sentiment against the measure was secretly created and fomented by the water company from which San Francisco gets her present water-supply. This is also suggested by Mr. Hearst's New York *American*, in which we read:

"Practically alone among the great cities of the United States, San Francisco has been in the grasp of a privately owned water company which furnishes an insufficient water-supply at exorbitant rates.

"The struggle over the bill is instructive as showing how readily shrewd managers of a monopoly can rally to their aid well-meaning but ill-informed people of prominence, and dupe, or buy, a large, but careless, section of the press.

"*The American* and *The Examiner* have urged the passage of this bill because they knew that the water was necessary to the lives and health of the 500,000 people of San Francisco. They held human beings of more importance than scenery, but even at that did not fail to inform themselves and their readers that the scenery of Hetch Hetchy would be enhanced rather than impaired, and made more accessible, instead of being obliterated, by the proposed improvements. The literary gentlemen, college professors, and newspapers that have been used as catspaws by the water company have been made ridiculous because they did not take the trouble to ascertain the facts."

FOREIGN COMMENT

ANTI-GERMAN RIOTS IN ALSACE

TRANQUIL ZABERN, "the pearl of the Vosges," "the city of roses," has been recently the scene of violent excitement and riot that shook all Germany, imperiled the Ministry, and might have endangered Franco-German peace. It was all started, we read, by a young German officer, Lieut. Baron von Forstner, who made some insulting remarks about the French flag, which is still held dear in Alsace. When he marched out with his company the Alsatians spat at him, and he rushed forward in a rage to revenge himself, but succeeded only in capturing a crippled beggar whom he wounded severely by a cut from his sword. Immediately the inhabitants of the town rose up and execrated the Germans, whose patrols cleared the streets, and arrested many who were innocent of any imaginable offense. The German troops cried "down with the Wackes"—Wackes being the German nickname for the Alsatian French, meaning thriftless loafer, or even apache. The commotion was discust in the Reichstag, and when the Imperial Chancellor, Bethmann-Hollweg, attempted to defend the military authorities in Alsace, he was hissed and hooted down and a vote of want of confidence in the Ministry was passed by the huge majority of 293 to 54. Kaiser William has shown his good sense in clearing out the whole German garrison from Zabern, and now tranquillity is restored. The *Morgenpost* (Berlin) thinks that a mountain has been made out of a mole-hill, and says Zabern has been the scene of a mere teapot tempest. To quote the words of this paper:

"THIS ILL-BRED LIEUTENANT."

So the Berlin *Morgenpost* calls Lieut. Baron von Forstner, whose aspersions on the French colors started the riots in Zabern. When the people hooted him, we are told, he sabered a crippled beggar, but later ignored Paul de Cassagnac's challenge to a duel.

"This is just the way we always mismanage things. It was merely necessary to send away this ill-bred lieutenant and all would have ended there. Instead of this, we have witnessed attacks of the patrols upon the population, newspaper men thrown into prison, interpellations in the Reichstag, very disagreeable diplomatic negotiations with our neighbors, bitter feelings roused in a province. All that long and painful political toil could raise up in Alsace, a part of the Empire, has been either destroyed or menaced.

"And notice the finest thing in the whole affair—Mr. Paul de Cassagnac, editor of the Paris *Autorité*, has challenged Lieutenant von Forstner to a duel! The fact that the Lieutenant vouchsafed him no reply is the sole rational element in the transaction."

The Alsatian recruits in the German army at Zabern were arrested and locked up, and finally sent away to distant garrisons, an act that has enraged Alsace still further. A generous subscription has been made for them among their townsmen, and as the *Elsaesser* (Strasbourg) says:

"The donations received by us will serve to provide to the thirty exiled Alsatians some little comforts, during the period of their service, and will prevent them from forgetting that Alsatians remaining in their own country are with them in mind and heart."

The Alsatian soldiers were punished professedly for a breach of discipline in having published the account of how Lieutenant von Forstner and his sergeant-major had offered a reward for any one who would "make a hole in the hide of these Alsatian roughs." The punishment is condemned by the Berlin *Boersen Zeitung*, which observes:

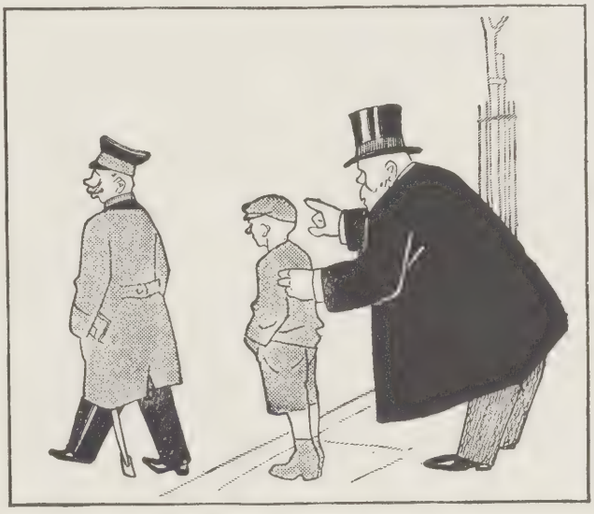
"It is characteristic of our military institutions to see the zeal with which the soldiers are punished on the suspicion that they made the affair public, while the lieutenant and sergeant guilty of applying the term 'wackes,' or roughs, to the Alsatians get off scot-free. These tactics are too transparent to deceive any one."

But the *Hamburger Nachrichten* takes the opposite view, and lays all the blame on the Alsatian soldiers who repeated in public the words of the "ill-bred lieutenant." We read:

"The burden of guilt in this affair, in which there has been so much mud-flinging, is to be laid upon the military persons who so lightly broke the pledge of silence which obtains in the service and gave their reports to the heckling clerico-nationalist press of the province. There is undoubtedly something rotten in the state of Denmark, or rather Alsace, which can only be eliminated with an iron besom."

The official *Lokal Anzeiger* chimes in with similar comment. It says:

"It is absolutely necessary to maintain in its full vigor the principle of authority and of discipline in the garrisons of the west. For it is the west that will feel the first shock if war should break out."



EDUCATING A BOY IN ZABERN.

"Sonny, that brave lieutenant see,
And if a soldier you would be,
Be sure to follow his instructions,
But don't call names, or there'll
be ructions." —*Ulk* (Berlin).

The Pan-Germanist *Taegliche Rundschau* (Berlin) remarks:

"It is time that our military leaders revive the practises of sending the recruits of Alsace-Lorraine to distant garrisons where they will be out of reach of the disturbing influences of the newspapers of their native provinces."

The French press are in the main very reserved in their comment, but express sympathy with the Alsatians and praise Paul de Cassagnac for his bold challenge sent to Lieutenant von Forstner. This view is emphatically exprest by the *Gaulois*, which speaks as follows:

"It would doubtless be absurd to attribute to the Zabern incident—at least at present—an

official significance in Franco-German relations, inasmuch as it has not called for diplomatic intervention. We must, however, agree that neither to Lieutenant von Forstner nor to the German Government, but only to our self-restraint and patience must be given the credit for the fact that matters have not taken a much more serious turn.

"So long as this singular little officer, who recalls so exactly the moral and physical character of the sad hero in one of the most piquant novels of Maupassant, 'Madame Fifi,' was contented by insulting the Alsatian soldiers, the French public, while expressing indignation at his behavior, recognized in the attitude of this Prussian lieutenant the traditional bad manners which have been the fruit of Germanization. But when the little lieutenant shouted out in face of his battalion the most brutal insults against our flag, we thought that he had gone a little too far, and everybody in France, without distinction of party, applauded the reckless and very French action of our brilliant confrère, Mr. Paul de Cassagnac, in sending a challenge to Mr. von Forstner."

Another French paper, the *Soleil* (Paris), a Catholic and Royalist organ, points the finger of scorn at Lieutenant von Forstner, and uses the following pretty forcible language:

"The Germans ought to be infinitely more put out than we are by the vile coarseness of their Lieutenant von Forstner. Such a type is not likely to enhance the prestige of an army or their national reputation for politeness. The Kaiser can not be exactly proud of him, and many Prussian officers doubtless feel that their comrade would find his proper place at a scavenger's cart rather than at a mess-table.

"Our flag does not need to be washed of the low language he used about it, but which did not stain or hurt it. On the other hand, the flag of the regiment under which this lieutenant serves has great need of purging by fire. This little animal of a Forstner does not humiliate France; it is Germany that suffers the humiliation. This obvious truth should be the point dwelt upon by French journals.

"Our attitude must be that of pride and contempt. Anger is misplaced when spent upon this blackguard of Zabern.

"Mr. Paul de Cassagnac, whose courage no one can despise, has done too much honor to this scoundrel. Mr. von Forstner did not deserve to be challenged or shot at. It was a pity to outrage the laws of the Church for a person who is déclassé, or only to be classed among the beasts.

"In their hearts the authorities at Berlin and at Zabern feel very sore about the affair. In their place we should immediately have disavowed complicity in the offense and have punished the offender. But the Teutons ignore elegant manners; they believe that it is clever to let investigations drag and mislead opinion by punishing the courageous Alsatians who communicated to the press the antics of Lieutenant von Forstner. No one, however, can be deceived by such unjust and blundering tactics, which can not wash clean the unclean officer while wounding our brothers of the annexed provinces."

Dispatches from Berlin predict the early fall of the German Chancellor, but the Chancellor himself says he has no such plan. In Germany, he reminds his opponents, the Chancellor is responsible to the Emperor alone, and no German statesman loyal to the Crown could think for a moment of making such a concession to the Parliament. He is convinced, he says, that the country at large does not desire to have recourse to a régime which would substitute "the yoke of Socialism for the harness of the Kaiser's authority."

THE WAITING VULTURE.

Cursing and crusht, these enemies lie low,
Nor heed the presence of their common foe.

—*Ulk* (Berlin).

ARGENTINA'S SYMPATHY WITH MEXICO

WE HAVE BEEN WAITING with some impatience to see what the greatest and richest of the South-American Republics thinks of Mexico's relations with the United States. The *Prensa*, of Buenos Aires, which must be classed with *The Times* of London and the *Temps* of Paris as representing the wealth and culture of its national metropolis, has at length broken silence and presents in a long editorial the position which Argentina takes. The points made in this article are that Pan-Americanism means a harmonious union of the States whose individual sovereignty is not to be infringed or violated by the intervention of any other Power. The blame of the present strained relations between Washington and the City of Mexico is laid to the mistakes of the former. The *Prensa* declares that the vacillation, uncertainty, and contradictory movement of affairs, as telegraphed to Buenos Aires, delayed this great organ in the utterance of its opinion. But things are becoming clear. The first plain fact is thus stated:

"Whatever may be the general opinion in the United States, it is evident that the condition of things at present prevailing originates in Washington's very hazy notion of the sovereignty of each South-American nationality. The tendency to intervene or interfere in the internal politics of Mexico, which manifests itself in a more or less furtive manner, would never have existed if, in the judgment of the great Republic of the North, there prevailed a sentiment of respect, complete and unreserved, for the integrity and inviolability of the international standing which belongs to the Latin-American States. The basis for such a principle is solid and clear, and there never was any reason for expecting that differences would arise between Mexico and any other of the Southern Republics. In this connection we might, in the place of Mexico, put Colombia, Peru, the Argentine Republic, Chile, or any of the others. The same principle of sovereignty governs their relations with the United States and with the other perfect sovereignties which occupy the Western Hemisphere. This principle has, however, been outraged for the sake of the vast commercial interests of the United States rooted in Mexico. It is, of course, to be expected, when people suffer wrongs in a foreign country, they should seek for redress through those diplomatic means which are intended for their defense. But among these means of redress intervention in the domestic regimen finds no place, neither do they involve the assumption of protectorates which imply an imperialism whose pretensions we would absolutely ban.

"The doctrine of Pan-Americanism, preached and disseminated at Washington and accepted with approval by the citizens of the Northern Republic, must always include an acknowledgment of the sovereignty of the South American States, which will never accept it without this essential proviso. . . . In our opinion the Mexican imbroglio would never have reached a head if at its commencement the Government of the United States had taken a firm and strict attitude, yet in harmony with the respect due to Mexican sovereignty."

The United States had, of course, free right to recognize or not to recognize the new Government of Mexico—but not to dictate its policy, we are told. In the clear sentences of this article:

"No one can dispute the right of the Government at Washington to refuse to enter into relations with the Government of General Huerta. But as to the right of intervention in any form, with a view to destroy or create a government—to permit it is to open an abyss which only a forcible assertion of justice would avail to bridge. . . . The Government of the United States might properly even claim the right to recognize as belligerents the revolutionary party, in order to bring influence to bear upon Huerta and his followers. We grant this; but action in regard to Mexico should be merely that of an outsider and not claimed with a view of taking an active part in the struggle of the combatants."

That the higher kind of Pan-Americanism will eventually win is the firm belief of the writer, who, after expressing his confidence in the common sense and sincerity of our Government, continues:

"We are confident that the doctrine of international relations which we have outlined will eventually triumph, changing the incertitude, the distrust, and the ill-feeling which now prevails into a bond of cordiality uniting the two races which occupy the Western Hemisphere. But an attempt at intervention in any way whatever in Mexico is sure to result in South America's repudiation of Pan-Americanism of whatever kind. Yet the United States may be sure of receiving sincere and profitable hospitality in South America on condition that Washington recognizes in each State an unshackled sovereignty, not less absolute than that of any other state on earth. All ideas of protectorate must be abandoned as unjust, oppressive, and bound to cause disorder."—*Translation made for* THE LITERARY DIGEST.

"WE MUST DROP OUR MONROE DOCTRINE."

So Professor Bingham, of Yale, tells Germany, and hints rather plainly at a Japanese combination with South America to make us drop it.

AN AMERICAN SLAP AT THE MONROE DOCTRINE

PROFESSOR BINGHAM, of Yale, an expert on Latin America, where he has traveled extensively, has published a work under the title, "The Monroe Doctrine an Obsolete Shibboleth." He was subsequently requested by the editor of the *Berliner Tageblatt* to communicate to its readers, in the columns of that leading German paper, his views on United States policy in South America, a country where German interests are yearly becoming of greater importance. The professor begins his article telling his readers that they must be careful to distinguish between the Monroe Doctrine of 1823 and the Monroe Doctrine as it was developed under Cleveland's second administration by Secretary of State Olney on the occasion of the Venezuela muddle. On this point Dr. Bingham says:

"The new Monroe Doctrine rests on false premises and its activity is derived from impossible theories. Only listen to what Olney says: 'The States of North and South America are by their geographical position, their natural sympathy, the similarity of their form of government, commercial and political friends and allies.' "

Dr. Bingham denies that the geographical proximity of the Latin and Anglo-Saxon republics establishes the soundness of any such presumption. On the contrary, he remarks:

"Any schoolboy knows that this statement is not in harmony with the real geographical position and proximity of South America to the countries of the world. The greatest of South-American states are situated much nearer to Spain and Portugal, for instance, than they are to New York and New England. Key West is not nearer to Rio de Janeiro and Buenos Aires than it is to Gibraltar, and the general route from Valparaiso to San Francisco is longer than that from Valparaiso to London. Peru is bordered by the Pacific Ocean, and yet is farther from Puget Sound than from Labrador."

To talk about "natural sympathy," says the Professor, is merely "to throw dust into the eyes of the American people." "Such sympathy has no existence," at least as regards South America. To quote further:

"From the South-American's point of view the Monroe Doctrine of to-day is not only a burden to be borne, but an actual injury which we inflict only because we are ignorant of the position of things in South America. We have assumed the attitude of the 'Elder Brother with the Club' who at one time might have been justified in assuming a control which to-day is superfluous. . . . It is necessary for us to understand—once for all—that the leading Powers of South America are quite able to take care of themselves and already are strong enough to treat our Monroe Doctrine with derision."

"The indications of this fact are legion," continues this authority on diplomacy and South-American affairs. The newspapers, monthlies, and university teachings show that in Latin America the claims of the Monroe Doctrine "everywhere excite hatred and antagonism." This point he dismisses, however, as beyond the scope of his essay, but lifts his voice in warning. "The writing on the wall" is visible, he says dramatically. "Brazil has the largest dreadnoughts in the world." "Argentina and Peru are building ships of war." He continues:

" 'The writing on the wall'—I will not say that a Mongolian hand has shaped the letters. Yet it may safely be averred that many thoughtful minds see in South America the crucible in which Latin, Indian, and Asiatic blood are to be closely intermingled. The leading Indian inhabitants of Peru, Bolivia, Ecuador, and Colombia, according to an eminent anthropologist, so closely resemble the natives of Northern Asia that the hypothesis of South America being originally colonized by Asiatics assumes an air of plausibility. It is at present quite probable that this colonization is actively going on. One thing is certain. The Mongol question in South America has reached a critical stage. The position Brazil has taken with regard to Japanese immigration is exactly opposite to that taken by California. Argentina actually welcomes the Japanese, and these immigrants are so numerous that the Japanese Government has subsidized a direct line of steamships by the Cape of Good Hope route. Another Japanese line passes by way of Honolulu to the west coast of South America."

If Latin America is powerfully reinforced from Asia it is better for us, says this writer, to have the "A B C"—Argentina, Brazil, and Chile—for friends and not for enemies, "that is, we must drop our Monroe Doctrine." It is, moreover, a delusion, he continues, to think that the Monroe Doctrine helps our commerce. We should follow Germany's example:

"Germany has shown, especially by her action in Brazil, how this is to be done. Is it true that she is only as powerful in army and navy as America and not a whit stronger? If we look at the matter from a logical point of view we should find that nothing hurts commerce so much as political interference, which makes enemies for us not only in South America, but also in Europe, and involves a costly loss of time. Would it not be wiser to heed the warning of James Bryce, who holds that as advocates of peace we should gain the greatest influence and eventually control the whole western hemisphere, and, thus inspired, refrain from holding an umbrella over other people who already have one of their own, or from holding it over a friend when it is not raining?"—*Translation made for* THE LITERARY DIGEST.

A HINDU REVOLT IN SOUTH AFRICA

THE RIOTS of the Hindu immigrants in South Africa have given a critical turn to the problem which for many years past has been smoldering, ready to burst into flames at any moment and threaten the very existence of the loosely-jointed British Empire. The authorities in London and in India are being assailed by letters and cables, deputations and petitions, to protect the Hindus in South Africa from Boer persecution, which, the brown subjects of King George avow, is being heaped on the heads of their countrymen because the East-Indians had the temerity to fight for the British in the Boer War. Meantime, the British authorities seem to lack the power to interfere in the local affairs of their

A HINDU "PASSIVE RESISTER."

Mrs. Ramabai Sodha, and baby. She is working to save East-Indian immigrants in South Africa, and is the first Hindu woman to go to jail as a "passive resister."

South-African colony. The muddle thus created is causing grave anxiety; for since the terrible days of the Sepoy Mutiny of 1857, when the Hindus and Mohammedans slaughtered British officials and merchants, this is the first time that the East-Indians have come into armed collision with the white man. There is imminent danger of sympathy becoming inflamed in India itself, and, realizing this danger, Lord Hardinge, the Indian Viceroy, has made the strongest possible protests, which, however, instead of making the position easier for the East-Indian immigrants, have only served to invite a "calling down" from General Botha, the South-African Premier.

The chief grievance which has led up to the revolt of the Hindus in South Africa, we gather from *Indian Opinion*, a weekly published partly in English and partly in *Gujarati* in their cause at Phœnix, Natal, is the annual tax of $15 which the South-African Government extorts from each Indian coolie who came to South Africa under indenture, and who stays there after the expiration of his term of indenture. To quote:

"For many reasons we consider that the central point of the struggle is this blood tax. . . . We may here recall the fact that the original intention of the then Government was to impose an annual tax of £25 on ex-indentured Indians and to make its non-payment a criminal offense. This was too much for the Government of India. . . . The figure was therefore brought down to £3, and the Government of India would not listen to the proposal to make its non-payment a criminal offense. So a bill was passed in 1895 imposing the tax, the condition being that, if the ex-indentured Indian left for India on the termination of his indenture or entered into further indenture, he was exempt, but if he did not do either and wished to settle in Natal as a free man, he and his were bound to pay the tax, which could be collected by a civil summary process.

"The first collection started in 1900, and since then men, women, and children have been harassed, more or less inexorably, to pay this wretched penalty for their freedom. We call it a penalty because it is admittedly not a revenue-producing impost. It is avowedly for the purpose of compelling the helpless people to reindenture or to return to India, whence they came to avoid starvation and on the strength of unscrupulous allurements of touts.

"The law officers then set about working to find out how they could send these men to jail, altho it was a compact between the Natal and the Indian Governments that it was not to be deemed a criminal offense if the tax was not paid. They found out that it was possible to use effectively the small-debts clause of the magistrates' courts act in order to override the compact and send these people to jail if they did not pay the tax. . . . . .

"Then came the climax. . . . The Union Government made a definite promise that it would remove the tax. And yet it broke the promise."

Another issue which has led the East-Indian immigrants in South Africa to resist the authorities of the Union Government, and which is especially responsible for Hindu and Moslem women fighting the Administration (for strange tho it may sound, East-Indian women are active in the struggle), is the recent decision of the South-African Government to bar out East-Indian women and children on the plea that they had not been married either according to Christian rites or civil law. *Indian Opinion* says of this regulation:

"The Union Government, in pursuance of its policy of greater repression of the Asiatics than before, and not being satisfied with its attack on the male members of the community, wanted to extend its hostile operations to our womenfolk. Some zealous law officer discovered that it was possible to prevent the entry of wives of domiciled Indians by declaring their marriage to be illegal in terms of the South-African law. They therefore challenged the entry of such a woman at the Cape, and Justice Searle was called upon to decide the issue now raised for the first time by the Government. The learned judge pronounced marriages performed according to the rites of a religion that allows polygamy to be illegal, and, as the person claiming before him to be the wife of a domiciled Indian was a Mohammedan, her marriage could not be recognized by the courts of the Union. . . . The doctrine was carried to its farthest limit by Justice Gardiner when he declined to recognize the marriage of an Indian wife when she claimed exemption from liability to give evidence against her husband in a trial against him on a charge of murder. Thus, suddenly, non-Christian Indians found that in South Africa their wives occupied merely the position of concubines, and their children were considered illegitimate. . . . . .

"Then there remained the question of the admission of plural wives (of polygamous East-Indian immigrants settled in South Africa). . . . The practise has always been to admit such wives of domiciled Indians. . . . The first shock of disturbance in this practise was felt in 1911 by a decision of Justice Wessels. . . . As a result of the decision the British Indian Association carried on correspondence with the Government, and an assurance was given by them that all cases of hardship would be considered by them. . . . But the disposition of the Government seems to be now to recede from the assurance contained in this communication (with the result that the polygamous wives of East-Indian settlers are barred out)."

These two issues, combined with the general grievance that East-Indians are debarred from entering South Africa, and that such of them as have been able to enter the country are harassed at every point, led the settlers first to wage a relentless passive-resistance struggle, but after some years of it, finding that it did not accomplish the object, they are trying active resistance.

SCIENCE AND INVENTION

WHY WE EAT MEAT

MOST OF US decide whether or not we shall eat meat by referring the question to our palates or our pocket-books. But we usually like to back up our preferences or our prejudices by scientific authority. Besides, the rival claims of vegetarians and advocates of meat-eating are rather puzzling at times. Scientific research has not solved the problem to the satisfaction of either party, but it is throwing some light upon it. A German professor and privy councillor now undertakes to tell us, in *Die Umschau* (Frankfort-on-the-Main), why we eat meat—if we do—and to point out who of us ought to eat it and who ought not to. It is not very startling to be told that meat is good for dwellers in the frigid zones, and correspondingly bad for people in the tropics. But it may occasion some surprize to hear that in temperate climes sedentary persons need more meat than workingmen, just as they need warmer clothes and warmer rooms to work in. Adults eat meat, according to Professor Rubner, in order to get a sufficient supply of the nitrogen-containing albumen, which is so important a constituent of animal foods. As he puts it:

"Albumen has two important functions: material and dynamic. It is the basis of all the specific nutritive processes of the cells. If a minimum of about an ounce is not provided the cells die. Under natural conditions it is usually only nursing infants who exist with this low provision of albumen. . . . If albumen in excess of the nitrogen minimum is consumed, it merely yields energy."

Professor Rubner explains that while it is possible to live on meat alone, with the addition of the proper salts, this would require nearly two pounds of meat per day, which he says would be too severe a tax on the jaws. But the diet often contains 2 to 13 ounces of albumen, a very large excess over the required minimum. This excess may rise or fall without affecting either health or working power, but if there has been a serious loss of cell albumen, such as might be caused by illness or starvation, this deficiency is made good with greater rapidity when the total consumption of albumen is large, within certain limits. He continues:

"Since the child, a growing organism, needs no more albumen than the minimum contained in milk, the balance can not be disturbed so long as growth is continued, since this minimum provides for growth. In emergencies the organism falls back on the nitrogen supplied for growth, which of course causes a temporary checking of that growth. But in the adult the relation between albumen and the organs is entirely different. For the adult a minimum of albumen is not the normal condition. The nutritive processes are accomplished slowly and only with larger quantities of albumen. Hence a loss suffered by the organs of the adult is replaced very slowly even in favorable conditions. In daily life we must allow for accidental injuries to the organs and be able to restore them rapidly. Hence we need a considerable excess over the minimum. An insufficient provision of nitrogen causes loss to the cells, especially in the muscles. This danger, however, is not so great among hard-working men as among the inactive, apparently because the working organ is able to utilize more fully even a small excess of nutriment than the passive organ."

People in cold climates eat meat, says Dr. Rubner, because the large quantity of albumen in it makes them feel warm:

"A tremendous increase in bodily heat can be produced by albuminous food. No non-nitrogenous food yields even approximate results. This increase, which is entirely internal, and therefore produced when the body is absolutely at rest, is accompanied by a great increase of evaporation, provided the temperature of the air is not too low. The animal's breathing becomes more rapid. But if the temperature be lowered in the experiment room, a very great degree of cold can be reached before the animal reveals by his breathing—that is, by his increased excretion of carbon dioxid—that the cold has gradually become perceptible. Experiments on animals also prove that in cold climates large quantities of albumen are appetizing and conduce to a sense of well-being."

But ordinarily, he hastens to add, "nothing can be more unfavorable to a high degree of productiveness in labor than an excessive addition of albumen to the diet." In proof of this he writes:

"I once investigated thoroughly the contrast between albuminous diet and carbohydrate diet as regards yield of labor. Even in a state of rest an albuminous diet considerably increased the heat given off and the activity of the skin. When working, however, the albumen-eater could not get rid of heat by sending a greater supply of blood to the skin, but only by profuse perspiration. This is much less in those fed on carbohydrates, such as sugar; hence an excess of albuminous food is not desirable for workingmen in ordinary climatic conditions."

For the tropics heavy meat-eating is even less desirable, which explains why laborers there can thrive on vegetable food poor in nitrogen. But—

"The case is very different in harsh climates, both for laborers and for persons not engaged in muscular activities. The former require food very rich in albumen when working outdoors or in cold rooms. As for sedentary persons, we observe that to be comfortable, they must have either heated rooms or very warm clothing. Especially in the morning hours they show a tendency to feel chilly. When we consider that a person half of whose food is albuminous shows an increase in heat of 27 per cent., it is obvious that he is naturally more resistant to cold. This feeling of warmth is not a deception like that produced by alcohol, but proceeds from an actual increase of heat."

Professor Rubner declares that such an increase of heat in the meat-eater enables him to be comfortable in a temperature lower by 18° Fahr. than the person fed on carbohydrates can stand. Another point of interest noted is that the meat-eater commonly eats a larger proportion of meat in one of his three daily meals and more carbohydrates in the other two, whereas a vegetable diet has the nitrogen and carbohydrates better balanced in all three meals. Hence, in the first case a specific outburst of energy after the meat meal may be noted, which is not seen in the case of the vegetarian. So whatever ills meat-eaters may be subject to, it might be gathered from Dr. Rubner's statements that they at least get more comfort and pleasure from eating than do the vegetarians. As we read:

"This thermic comfort is doubtless unconsciously a powerful factor in the preference for meat in the temperate zones and among persons whose metabolic changes take place in a state of rest. Doubtless, too, the preference for meat is partly explained by its culinary qualities, for there is hardly any other kind of food which offers such variety and such agreeable flavor without demanding a high degree of skill from the cook."

Persons engaged in arduous brain-work are the ones who most insist on the appetizing quality of food, we are told, since they are not performing muscular labor, proverbially the best sauce. Moreover:

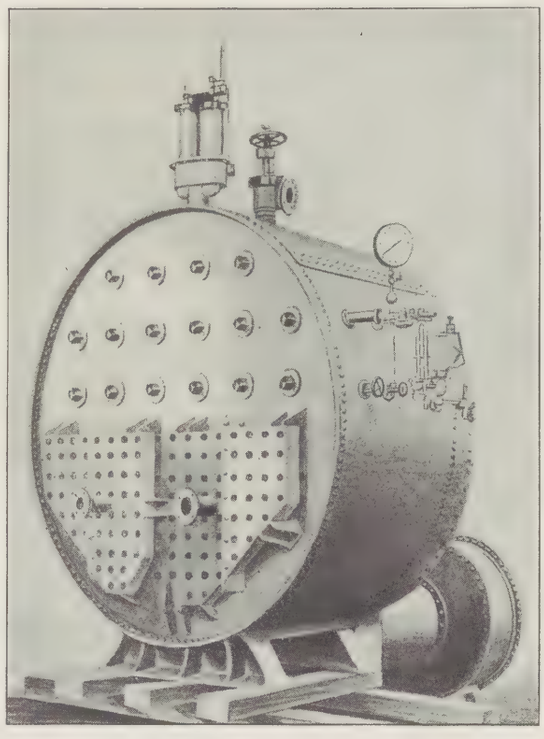
"Among such persons appetite is frequently capricious, so that palatable food is a necessity. Physicians always recognize meat as one of the best means of stimulating a jaded appetite. It is known also from physiological experiments that scarcely any other form of food acts so favorably on the processes of

digestion as the so-called extractive matters of meat. The attempt is often made, where price is an object, to substitute for meat other sources of albumen, such as fish, skim-milk, leguminous vegetables, etc."

But tho such articles may be of much value among large classes of people, Professor Rubner finds that they do not serve to solve the problem of the demand for meat in the diet. Even in prisons it is found that the albuminous foods of vegetable origin, served in stews and soups to take the place of meat, are commonly lacking in "tastiness," so that they tend to cause loss of appetite.

"Such a regimen requires the addition of stimulants for the appetite, hence some form of animal food in addition can not be dispensed with, such as cheese, milk, fish, and beef. The savory vegetables which would offer an appetizing variety are too dear for such menus, and so is the skilled cooking which could make the cheaper things attractive."

We are reminded, too, that custom plays a very large part in making food acceptable, especially among people of little education. It is also important to remember, in seeking a satisfying and sufficient diet, that foods as purchased do not contain a constant percentage of nitrogenous matter. This may vary, not merely according to degree of concentration or adulteration, but, in the case of meats, with the quality, and, in the case of vegetables, with the harvest of various places or years. The last word in the matter is that the percentage of nitrogen in the diet must never be allowed to fall too near the danger-line of the absolute minimum.—*Translation made for* THE LITERARY DIGEST.



95 PER CENT. EFFICIENCY HERE.

This is a steam-boiler designed for the flameless heating process. It converts nearly three tons of water into steam per hour.

A HYGIENIC CIGAR—A new form of cigar, patented some time ago in Germany, is described in *Energy* (English edition, Leipsic, October). The tip of this cigar, instead of being pointed, has a bowl-shaped cavity, which is declared to be a great advance from the standpoint of hygiene. The dangers in some present methods of cigar-manufacture have been widely commented on. The tip of the cigar can not be made simply by twisting the wrapper, so that paste has to be employed. It has frequently been asserted that the cigar-maker even uses his own mouth for making the tip. But by the new method:

"To remove all doubts and objections to the manufacture of tips at one stroke, the firm of Baer Brothers, of Mannheim, patented a process of producing the tips by machine. The tip, however, is not pointed any longer, for in its place there is a bowl-shaped cavity. As a matter of course, there is no paste used, and the maker is no longer tempted to employ his mouth. For it must be conceded that the old method was not pleasant even for the cigar-makers, so that they express their full approval of the new, clean method of manufacture. . . . The leading exhibitions of the past few years have given full recognition to this advancement in the manufacture of cigars from a hygienic point of view. At the International Exhibition at Brussels in 1910 the firm was awarded the gold medal, as it was also at the Hygienic Exhibition at Dresden in 1911."

FLAMELESS HEAT

THE IDEA of a heating apparatus in which coal-gas should be burned without flame occurred recently, at about the same time, to an Englishman, Prof. W. Bone, and a German, Professor Schnabel. The principle utilized by both is identical with that employed in certain types of automatic lighter attached to a gas-mantle. These consist simply of platinum sponge, or platinum in fine powder, which has a curious faculty for absorbing gas. When a mixture of ordinary lighting gas and air passes through this spongy stuff, the two gases are brought into such intimate contact that they take fire of their own accord. How this principle is utilized on a larger scale and with a cheaper material to produce flameless heat is thus told by Carl Snyder (in *Collier's*, New York, December 6). We read:

"It is very well known that the 'efficiency' of an ordinary fire is very low. Coal burned in an ordinary grate does not give off more than 5, or at most 10, per cent. of the heat it contains. . . . Even when the coal is converted into gas and burned as a gas-flame the efficiency is still not great—not over 30 or 40 per cent. . . . . .

"In the system devised by Prof. W. Bone, in England, a mixture of gas and air is forced through a finely porous mantle of some substance, like magnesium, extremely resistant to heat. There is always a slight excess of air, but it is quite extraordinary how small this excess may be, so perfect is the combustion. When under a not very high pressure, the mixture of gas and air is forced through this porous material and lighted with a match about as you would light a gas-stove. There is at first the ordinary gas-flame, which, as you increase the amount of air, becomes thin and blue and finally vanishes entirely. At the same time the surface of the porous diaphragm begins to glow and soon becomes white hot.

"The theory of the flameless heater is exactly the same as that of the gas-lighters—that each little molecule of gas and oxygen shall be brought into such contact that they must combine. The effect is that there is not only no flame, but no smoke. The result is almost pure carbonic-acid gas, which is colorless, odorless, and harmless."

Actual measurement has shown, we are told, that the combustion in the flameless heater takes place in a layer of about one-eighth to one-third of an inch, and is therefore so concentrated that a very small stove suffices to heat a large room and can be carried about in the hand like a lamp. To quote further:

"For all kinds of metal-work ovens are built on the same principle. From ordinary producer gas they develop tremendous heat—1,800° C., which is about 3,400° F.; and of still greater utility are the steam-boilers made after this same process. Here the gas is driven through heating tubes containing the porous material, and the efficiency runs as high as 95 per cent. These boilers for a given surface develop twice as much heat as a locomotive boiler, and with them it is possible to get up steam in a jiffy. There is no long wait.

"If you see an ordinary soft-coal or wood-burning locomotive belching forth its usual clouds of smoke and soot—wasting more than three-quarters of the heat in the fuel it burns, reflect on what it would be to have locomotives, clean as a kitchen in

'Spotless Town,' with no visible furnace, no shoveling of grimy coal, and racing along without a trace of smoke, as tho it were running cold! The comprest gas would be carried in cylinders.

"But the flameless heater has other and perhaps still greater possibilities. It is possible to turn heat directly into electricity. But an efficient thermoelectric generator has never been devised. It may be that one will grow out of the Bone-Schnabel invention."

RAIL-WRECKS AND LABOR-UNREST

NOT THE UNITED STATES alone has had to deplore the occurrence of serious railway accidents of late, and to speculate on their causes. In October and November of this year Europe was shocked by what *The Lancet* calls an "appalling series of railway disasters," in Great Britain, France, and elsewhere. In a leading editorial *The Lancet* (London, November 15) suggests that the cause may be general and not local, and ascribes the accidents indirectly to the same spirit of unrest in the industrial world that has produced syndicalism, with its accompaniments of sabotage and the general strike. This spirit in turn has its deeper cause, perhaps a too-rapidly changing environment, to which our nervous systems fail to adapt themselves. Says the writer:

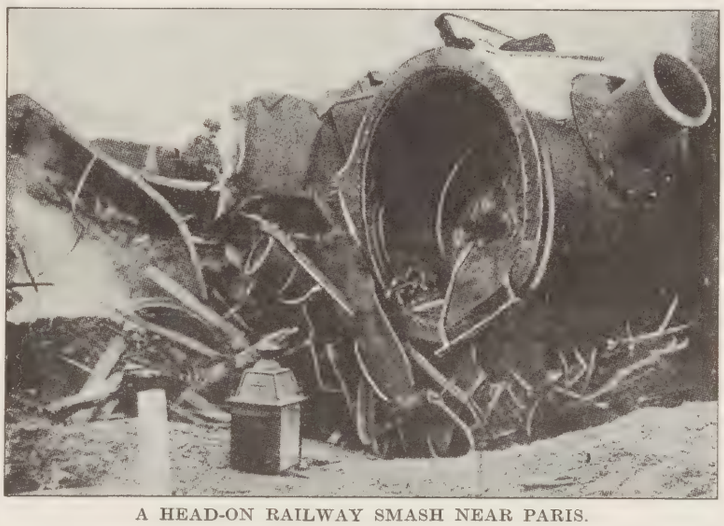
"It would, of course, be absurd to found on even a larger number of such instances a general charge of inefficiency and recklessness; and a charge of this sort would be doubly unjust when, as in the present case, it would be urged against a body of public servants whose past record has been so admirable. But without making any such sweeping accusation, it is quite legitimate to inquire whether these instances of negligence may not be related to that ominous change in the mental outlook of the industrial classes of which there have been so many and such grave manifestations in the last few years. . . . . .

"The temper of syndicalism represents in the group something akin to the temper of paranoia in the insane personality; and just as the self-centered tendency of the persecutory lunatic warps his sense of proportion, makes him too keenly sensitive of his own rights and callous as to the rights of others and the duties which he owes to others, so does the collective paranoia of syndicalism lead to a similar loss of moral balance in the attitude of the given industrial group toward the community of which it should form a part. And this collective spirit naturally influences for evil the individuals who constitute that group; it fosters a state of emotional irritability, of impulsiveness, which is unfavorable to clearness of judgment and accuracy of perception, and which, therefore, might well contribute to such errors and omissions as those responsible for the recent epidemic of disaster. We are bringing no charge of recklessness, and certainly no charge of malice, against particular persons; but we suggest that the conditions of railway travel to-day require most careful attention, and the attention should not be focused upon the details of this or that catastrophe. . . . . .

"If industrial discontent and unrest are contributory causes of inefficiency and recklessness in individual workers, these causes are in their turn the effects of other causes, and it is to the removal of these deeper sources of evil that the efforts of social reform should be directed. And in this task a due consideration of the psychological factors of the problem will be an aid of no small value. Lying beneath most of the varied manifestations of disorder and eccentricity in modern life may be detected as a potent influence the difficulty of nervous adaptation to a too-rapidly changing environment. Even the firmest believer in the essential capacity of the race would hardly maintain that human intelligence has progressed in a degree at all commensurate with the development and multiplication of the numerous instruments devised and fashioned by those gifted and subtle intellects whose discoveries have revolutionized science since the middle of the last century."

COLLISION AT WATERLOO JUNCTION, ENGLAND.

The sixth collision of a moving and a standing train in England in three months, and the tenth serious railway accident there this year.



A HEAD-ON RAILWAY SMASH NEAR PARIS.

One of the worst of the epidemic of such disasters that has lately been afflicting France. Many of the passengers were caught in the blazing wreckage.

IS REENFORCED CONCRETE SAFE?—According to a writer in *Cosmos* (Paris, November 6), who gives *L'Electricien* (Paris) as authority for his facts, structures of reenforced concrete bear with them the seeds of their own ruin—at any rate whenever electric currents and moisture have access to their iron skeletons. Electrolysis does the business. We read:

"The application of reenforced concrete to the construction of buildings, bridges, reservoirs, etc., has made such rapid progress that we think little of the drawbacks that may counterbalance the advantages of the new system.

"These drawbacks exist; and experience—that pitilessly reveals all the faults of men and things—has demonstrated that reenforced concrete carries with it, in its very essence, an element of rapid destruction. Humidity and impurities give rise, in the

bars of iron embedded in the concrete, to local electric currents. Under the influence of these, the bars become covered with a layer of oxid, and thus swell, exerting such a pressure on the cement that it cracks.

"This pressure may be measured by the following method: In a steel cylinder whose interior diameter is 1½ inches is placed a steel bar 1 inch in thickness, the space between being filled with cement. The whole is thrust into water, and the interior

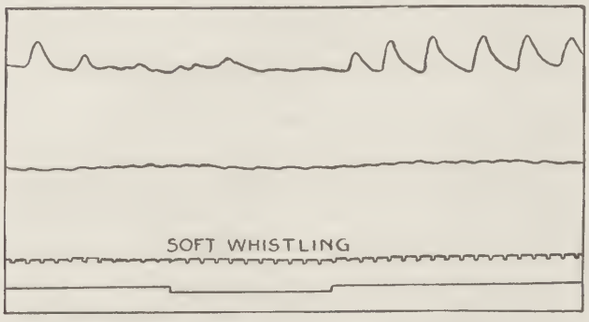


FIG. 1.—HOW WHISTLING SOOTHES THE SLEEPER.

Note the quieted breathing and the longer brain-pulsation waves, showing how soft whistling comforted a child of three days.

rod is connected to an electric circuit. Becoming oxidized, the bar exerts on the exterior cylinder a pressure which is found to be about 4,700 pounds to the square inch.

"Another test is to thrust into water a mass of cement 12 inches long and 6 in diameter, with a core of iron, through which a current of 50 volts is sent. In three hours the mass bursts.

"In these conditions, it is necessary to be very prudent with regard to the application of reenforced concrete to hydraulic work. Likewise, any crack that may admit rain-water may bring about the ruin of a structure."—*Translation made for* THE LITERARY DIGEST.

SOUNDS THAT SOOTHE THE BABY

IT IS A BRAVE MOTHER that dares kiss her own child without a doctor's permit, and of recent years a particular ban has been put upon the time-honored practise of soothing refractory infants by rocking them, dandling them, or singing them to sleep. Only a few weeks ago Mr. Irvin Cobb had an amusing skit in *The Saturday Evening Post* (Philadelphia), pointing out what wonderful brains and spines Napoleon, Julius Cæsar, and men of that ilk might have possest had their mothers not addled their nervous systems in infancy by such mistaken practises. Now comes an eminent scientist who proves, not by theory, but by a series of delicate experiments, that the ancient methods were right after all. *Die Naturwissenschaften* (Berlin, October 10) publishes an article by Dr. Silvio Canestrini, of Graz, entitled "The Sense of Hearing in the New-Born," taken from a longer monograph on the

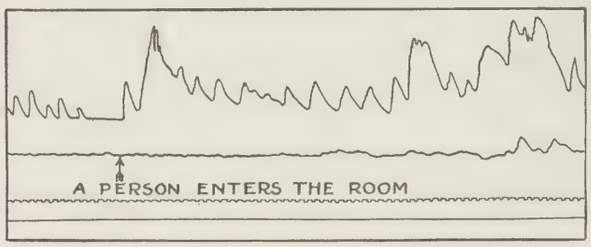

FIG. 2.—SUCH A DISTURBANCE!

And all because somebody entered and crossed the room.

sensory life of infants, in which he describes the effect of various sounds upon the nerves of babies. The writer tells us that on placing his hand one day upon the large fontanelle or "soft spot" of a new-born infant, and feeling the pulsation of the brain beneath his fingers, it occurred to him that this brain-pulse might be registered graphically by placing a delicate instrument in contact with it, and the records thus obtained used to study the effect of various stimuli—mechanical, optical, or acoustic—upon the child. Experiments were subsequently made with over 70 babies, both sleeping and waking, of ages varying from 6 hours to 14 days, the most interesting results being obtained from acoustic stimuli, tho the other senses were also experimented upon. Observations of breathing were made at the same time "to determine the dependence of the brain-pulse on the respiration, or its independence." The diagrams thus obtained were photographed, and some of them are reproduced here. The upper curve in the photograph always represents the respiration-curve. This was obtained by fastening a pneumograph to the abdomen of the babe, near the navel, by means of a rubber band. The second curve shows the pulsation of the brain at the soft spot. The third line represents intervals of time marked off evenly by an electric clock, each space equaling a half-second. The bottom line shows the duration of each single experiment by means of a marking-magnet. To quote Dr. Canestrini in further explanation:

"In normal infants the relation of respiration to pulse is as 1:3, and according to the curves we could determine that in quiet new-born babes there were from 40–50 respirations and 120–140 pulse-beats per minute. In any case it may be taken as a rule that pleasurable sensations in the infant are accompanied by a quiet behavior of both curves. Unpleasant emotions, on the other hand, often cause great variations in both

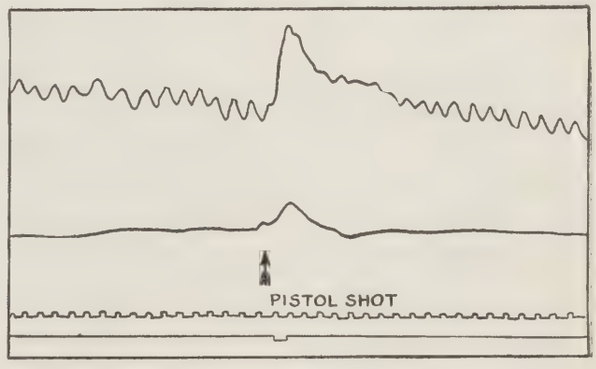

FIG. 3.—A CASE OF FRIGHT.

Here the child was startled by the report of a toy pistol.

curves; in such cases, however, it must be admitted that the active motions of the child, as well as its psychical sensations, play a large part in producing the graphic disturbance of the curves. Quiet breathing is shown by an evenly rising and falling curve, while screaming or active motions of the babe cause the waves to be irregular. . . . . .

"When the brain-pressure suddenly increases or quickly decreases, as is the case in screaming, the separate brain-pulses usually disappear, and there results a brain-pressure curve, which is the reflection of forced respiration. The brain-pressure curve commonly shows an ascent in response to all sudden stimuli, by which the subject is apparently affected unpleasantly. Pleasing conditions, on the other hand, cause a gentle sinking of the brain-pressure curve, even when the respiration-curve shows an irregularity due to other influences."

Dr. Canestrini made 279 separate acoustic tests, and gives detailed results in a number of cases. In the experiment described by diagram No. 1, "the subject was three days old and did not wake during the stimulus, which consisted of soft whistling."

"It exhibited a lowering of the breathing, with a definite increase in the length of the separate brain-pulses and consequently a lower pulse rate than during the same length of time before and after the experiment. Such stimuli often cause dreams in adults. . . . The sleeper is not wakened by the acoustic stimulus, but it causes unconscious associations of ideas which produce dreams.

"Naturally, such dreams can not arise in nurselings, but the retarding of the brain-pulse during the sleep shows clearly

how even in them the sensory system is able to influence the vasomotor and respiratory centers, tho in an unconscious state."

Fig. 2 will interest watchful mothers and nurses especially. It shows how a three-days-old child was seriously disturbed by the noise of a person entering the room, closing the door, and walking across the floor. The arrow shows the time of the entry, and the disturbance is especially apparent in the

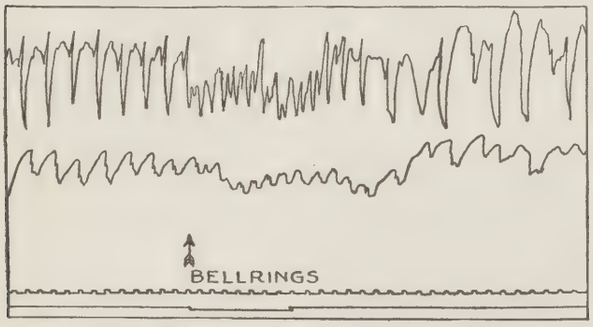

FIG. 4.—SOOTHING THE ANGERED SPIRIT.

Showing how an infant, in a perfect paroxysm of rage because of the pneumograph upon his head, was quieted during the ringing of a bell. The effect lasted for several seconds after the ringing stopt.

beginning in the respiration-curve. In Fig. 3, the stimulus was short and sharp—a shot from a toy pistol. An instant ascent of both curves was seen. The experimenter reasons by analogy that this was due to fright, as in the case of adults. This emotion was also exhibited in the tension of the skin of the abdomen, and in a visible twitching of the whole body. In one case in which a bell was rung in the hearing of a child that was awake, it was discovered that "on a repetition of the sound after fifteen seconds the reaction was slighter, altho this time the stimulus lasted three times as long. A third repetition showed a still slighter reaction." Dr. Canestrini considers this fact of the gradual diminution of the reaction when repeated to be extremely significant, since it proves that even at such a tender age inhibition impulses exist able to modify the amplitude of the reaction, so that "we have to do not with a mere automaton in which the effect always answers the cause, but must reckon with far more complicated conditions."

Most interesting of all were the experiments made on infants in a state of violent disturbance, as when screaming with rage. It was found that in such conditions vocal or musical sounds were markedly soothing in effect. In Fig. 4 the child was in a paroxysm of anger caused by the fastening of the pneumograph upon his head. We read:

"At the point where an arrow is shown a bell was sounded for four seconds, and an immediate sinking of both curves may be seen, which continued for three seconds after the sound ceased, after which the former condition was reverted to. Afterward a toy consisting of a number of tiny bells was rung in the ears of the screaming child (Fig. 5). Not till after three seconds was there a marked sinking, especially of the brain-curve, with an immediate return to the state of disturbance when the sound ceased."

The investigations of Wandt, continues Dr. Canestrini, have proved that in adults pleasant sensations cause the pulse to be slower and the amplitude of the breathing (*atmungsgrösze*) less, while unpleasant emotions cause pulse and respiration to be quicker. "By analogy we must conclude that there is an unpleasant sensation in cases where we find in infants (as often after acoustic impressions) an increase of pulse together with an increased respiratory activity registered graphically." While the experimenter found no infant among those tested to be insensible to acoustic impressions, he had some negative results with some infants to certain tests. But in 80 per cent. of such negative results the child was either asleep or in a state of anger. Strong acoustic stimuli were nearly always followed by a corresponding reaction in the curve, while negative results were sometimes obtained where the stimulus was milder, as the note of a tuning-fork, the playing of a harmonica, or the sound of the human voice.—*Translation made for* THE LITERARY DIGEST.

FOSSIL GEOGRAPHY

HOW THE DISCOVERY of the petrified remains of plants and animals is assisting geologists to make maps of our own and other continents as they were in times far antedating the earliest records of history, or even the reports of tradition, is described in a recent professional paper of the United States Geological Survey by H. S. Williams. Says the *Press Bulletin* of the Survey (Washington, December):

"In these days of exploration few parts of the globe remain unknown and uncharted, and in our desire for new lands to conquer we map the mountains and deserts of the moon and the canals of Mars. Within the last few years, as the work of the United States Geological Survey has given geologists a larger knowledge of the rocks of the United States, a new sort of geography has sprung up—fossil geography. In this new geography the lands and seas of the remote past are mapped in their true form, and by means of these maps we may follow the development of the American continent and trace its many changes of land and water from age to age. Why should not the geography of the American continent in remote geological time be of greater interest to us here in the United States than the present geography of the moon, or perhaps even the present geography of the interior of Africa? As the natural wealth of the country is in large part dependent on the rocks that make up the crust of the earth, it is well to know how and when the rocks were formed. It may seem scarcely possible to map these ancient lands and seas by studying handfuls of fossils taken from the rocks on their sites, but this is what is being done.

"The geologist can trace these geographic changes by noting the extent of successive formations and the changes in the character of the rocks, but the age and the identity of a geological formation must be determined principally by means of the fossils it contains. The more exact determination of the ages of sedimentary formations—the floors of ancient seas—makes possible, among other things, the correlation from place to place of geographic changes and shows the direction of invasion or retreat of oceanic waters.

"Some of the principles used by geologists in their detailed

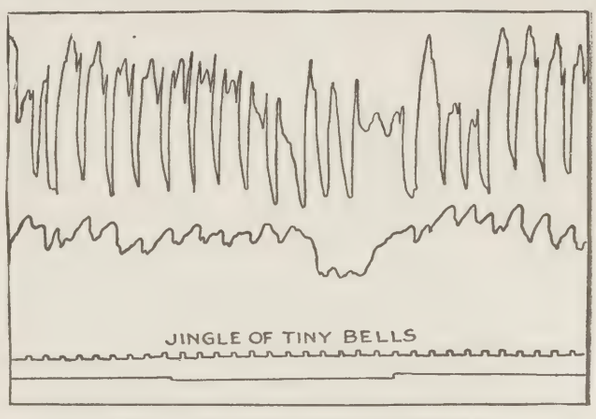

FIG. 5.—MILD MEASURES NOT SO EFFECTIVE.

In the case of the angry child of Figure 4 the jingling of a group of tiny bells took longer to affect the curves, and there was an immediate resumption of activity on the cessation of the sound.

work in stratigraphic geology are set forth in the United States Geological Survey's Professional Paper 79, . . . by H. S. Williams. This paper shows that groups of animals, or faunas, may be driven out of a region by earth movements or by other causes, and that the same animals, slightly modified perhaps, but still to be recognized, may later return to the region. A study of the fossils representing these recurrent faunas may thus throw light on geographic changes."

LETTERS AND ART

THE "MOST INTERESTING WOMAN OF EUROPE"

SOME ONE has said, whether cynically or not, that "America is a Montessori nation to start with." In the light of the general European opinion of the liberty of American children to express their own individuality, the projector of this principle as the basis of an educational system may or may not have much to teach us. At all events, she has lately landed on our shores, and the New York *Tribune* hails her as "the most interesting woman of Europe." Her gospel has preceded her, and her principles, expounded in magazine articles which we have quoted, are now being inculcated in schools founded for the special purpose. Time will have to tell "how completely her *laissez faire* methods are applicable to the quick, explosive nature of the American child." For any who share these fears with *The Tribune*, it may be reassuring to know that children of three or four under the Montessori method have their "silencio," the period of meditation. That does not mean, explains a writer in the New York *Times*, "a passive, enforced, paralyzed silence." On the other hand "it is a voluntary, active thing." Dr. Montessori herself is quoted as saying of the kernel of her system, which has been called "auto-education":

DR. MARIA MONTESSORI,

Who is visiting America, where her ideas have found more numerous advocates than in other countries, to be sure that their "development is right and unhampered."

"Meditation means something growing. The Jesuits succeeded in winning souls merely by encouraging the people to meditate. Meditation opened up an unsuspected inner world, which fascinated the type of person accustomed to flit over a multitude of things.

"Take the difference between reading and meditating. We may read a voluminous novel in a single night. We may meditate upon a verse of Scripture for an entire hour. When we read a novel in a night, it is like a wind that passes over arid ground. There is a squandering of the physical powers. But the one who meditates assimilates in a manner that surprizes himself, because he feels something unforeseen coming to life within him. It is as tho a seed had been planted in fertile soil, and suddenly, while it had been perfectly motionless, began to germinate."

Dr. Montessori has come to America, she said to the *Times* interviewer, because this country more than any outside her own has been interested in the method worked out in the *Casa dei Bambini*, in Rome. She confesses:

"I have come largely to understand the spirit of this great interest with which I have been in touch, tho somewhat remotely, in the teachers I have trained for their work in America.

"Here I seem to have many friends, many who are eager for the help that a system of child-development can give. I have been in receipt of, I may say, thousands of letters from American men and women during the past year. . . . . .

"I wish to develop and implant more deeply my educational ideas. By that I mean the underlying ideas, which are always obscured at the first by the petty and the trivial, often to their detriment. I come first to America because the work is progressing here more rapidly, and I would be sure that the development is right and unhampered."

As a matter of fact, we are told, there are now in America very nearly one hundred Montessori schools, and the State of Rhode Island has officially indorsed the method and is taking steps to introduce the Montessori system into its public schools. Out of a class of eighty-odd pupil-teachers who took Dr. Montessori's four-months' course at Rome last year, sixty-odd were Americans. But, adds the Doctor:

"I would not imply that the Montessori school is confined to Rome and the United States, however. It was a peculiar gratification to me to know that my book, 'The Montessori Method,' was being prepared in the Japanese tongue. There are already in Japan tentative schools where the method will be adopted. Under the influence of some of the leading Protestant missionaries two schools have been established in China.

"Then, too, the Sisters of Mary, at whose convent the first model school in Rome was established, have founded several schools in Syria.

"I am coming to secure the cooperation of America in the establishing of a laboratory school, a model school for every branch of psychological research in child-development. I do not mean the actual, material cooperation. I wish to interest American educators in my idea of this international laboratory, to prepare their minds for it, for I hope to have a branch laboratory in every country.

"The school constitutes an immense field for research. It is in reality a 'pedagogical clinic.' In view of its importance, it can be compared to no other gathering of subjects for study. We have our system of compulsory education to thank for that. There are gathered together living human beings of every social caste, of every degree of normality and abnormality. It is the field in which the culture of the human race can really and practically be undertaken, the field where seeds of perfection are sown.

"It is in this laboratory school that I shall have not only children who are older than those of the *Casa dei Bambini*, but children of different nationalities, so that the adaptation to temperament can be definitely worked out. The experience of my American teachers has proved to me that nationality is no difficulty in the application of method."

Dr. Montessori grows eloquent over the results of her method. She says children under her begin to despise their playthings be-

cause they give them no chance to exercise their powers of reason. She goes on:

"Intellectual exercise is the most pleasant thing a child knows if he is in good health. The children of the *Casa dei Bambini* would save little objects that they had acquired by themselves. They would preserve unharmed even the most trivial scrap of paper, altho free to tear it up, so long as that scrap of paper helped them to exercise their thoughts.

"But the most marvelous discovery was the physical improvement of these little children. Now, we never served food in the school. The little ones, all of whom live in their own homes, have half an hour's recess for luncheon, which they take at home. Not a single child in the school was given medicine; there was no change of diet, but in almost every case a new vigor and health was shown by blood supply, weight, and stature. They looked like the children of wealthy parents living in the country, and presented a strong contrast to their brothers and sisters at home.

"This renewed vigor was due solely to a complete satisfaction of psychic life. These children were in school from nine to five eleven months in the year. All this time they were continually busy.

"This amazing discovery might have been foreseen had we stopt to think how our own physical health depends far more on happiness and a peaceful conscience than upon anything material as bread!"

BURNS MANUSCRIPTS FOR SCOTLAND

THE BURNS MANUSCRIPTS, after a journey to this country, are to return to Scotland as the gift of an American who thus refutes a good deal of bitter newspaper writing upon the subject of the grasping Yankee who filches treasures—literary or artistic—from countries who ignore them until such attention is aroused. The Glenriddell manuscripts, it will be remembered, were held by the Liverpool Athenæum, and last July sold by them to an English broker who looked for an American purchaser. A hue and cry was raised; Lord Rosebery called the transaction "incredible and deplorable." The surviving heir of Robert Burns impeached the Athenæum's legal right to their possession and consequent right to sell the manuscripts, and instituted proceedings against them in her own behalf. Meantime the precious manuscripts disappeared and the world wondered where the last misdemeanant was. A week or so ago, at a dinner of the St. Andrew's Society in Philadelphia, Mr. John Gribbel revealed himself as the possessor of the documents on terms whose generosity are now amply acknowledged. In his speech the press report him as saying:

"During the summer just passed the English-reading world was shocked to read in the public press that the authorities of the Liverpool Athenæum had sold for money those priceless trusteed treasures. Hurried efforts were made to stop the transfer of the volumes, but the delivery had been made, and in the excitement they disappeared with the unknown buyer unhindered. Two weeks ago I was astonished beyond measure by having a dealer come to Philadelphia and submit to me for sale the missing manuscripts.

"Having an aversion to the possession of property of a certain class, I refused to consider them as any possible possession of my own, priceless tho they are, but, gentlemen, here they are sold as merchandise in the market-place and in my possession, but with a purpose of which I am sure you will approve. These manuscripts after the death of Burns were the property of Bonnie Jean. She only lent them to Dr. Currie, who wrote a life of the poet, and those who came after him had no stronger title to them. To whom, then, do they now belong by right but to Scotland, whose chief possession now is the glory of her immortal son?"

Many hands are now opened in Scotland ready to catch the precious parcel tossed back to her. Almost as many cities as claimed the birthplace of Homer advance a reason for their choice as future custodians. Lord Rosebery, at Mr. Gribbel's request, will decide on the rival claims. Dumfries, Alloway, Kilmarnock, Edinburgh, and Glasgow have each their Burns museums. The Scots are not without their sense of humor in seeing the part they really play in the whole transaction. Says the Glasgow *News*:

"At the same time, it is not clear that Scotsmen can look on their part in the transaction with great pride. We, for many years, allowed what is now discovered to be a sacred national treasure to lie in the hands of a Liverpool club, which apparently would just as soon have had a new billiard-table. When the club at last succeeded in selling the manuscripts, we expended ourselves in belated indignation, which was made the less impressive by its futility.

"The manuscripts disappeared. We heard that some dealer was carrying them around in Texas or Colorado in a sample trunk. Finally we are unexpectedly gratified by receiving them as a present from a good-natured gentleman of whom we never heard before.

"Nothing in the whole business exhibits either the dignity or efficiency of the Scottish people in a particularly favorable light. However, we are to have the manuscripts, and perhaps that is the main thing."

The story of the wandering manuscripts is valuable if for no other reason than to teach a lesson in international courtesy. Mr. A. L. Marlow, of London, a figure in the transaction, told a New York *Times* representative the story of the sale:

"For many years these manuscripts lay in a bundle at the Liverpool Athenæum.

"They were unopened, and their value practically was unknown. Mr. Bright, a well-known citizen of Liverpool, discovered these manuscripts and pointed out their value, and then they were put in a lockup, which made them practically inaccessible.

"Now, I don't think the Athenæum was at all in straits, because the institution really has plenty of money. But for a small institution such a treasure was like having the Kohinoor diamond. The proper place for them was Scotland, where they are going.

"Some members of the committee in charge of the Athenæum got busy, and the manuscripts were offered to Mr. Morgan, who, however, did not buy them, altho he was inclined to do so. Ultimately the committee decided to sell them. Nothing was done in secrecy, and there were no private meetings. The members of the committee sought legal advice, and satisfied themselves that the Athenæum had a perfect title to the manuscripts, and a legal right to sell them. They were taken to Tom Hodge, of Sotheby's, one of the straightest men in the book world, and he was asked to fix a price, and they were sold.

"The moment anything of the kind is sold in England a fuss is made. It was only the other day that Lady Desborough wanted to sell her Raffael, and offered it to the nation. The reply was made that we hadn't any money. Therefore Lady Desborough went ahead and sold the picture to a dealer, and he brought it over here. A couple of years ago the Duke of Norfolk had a picture he wanted to dispose of, and tho he lent it to the nation for five years, at the end of that time the nation did not want to raise the money to buy it, altho the owner offered to start a subscription list with £10,000 himself.

"Why, I sold recently in this country a volume presented by Burns to Clarissa, which thus became lost to England, and at this present moment in this country is a collection of the letters of two of the most famous literary men of the nineteenth century —neither of them being Browning. The letters were offered in London and bought at a moderate price, and were allowed to go out of the country.

"They can hold meetings of protest in Scotland, but not a dollar do such meetings ever put up.

"The Burns manuscripts, after being sold, were placed in my safe by Mr. Hodge, and lay there. No one offered a suitable price for them, and I brought them over here and through a dealer sold them to Mr. Gribbel, of Philadelphia. I am not a dealer—merely a seeker for literary treasures. I am not at liberty to divulge the name of the owner I have been representing."

The Philadelphia Ledger adds:

"The gift of Mr. Gribbel is not to Scotland merely, but to the entire Anglo-Saxon race and to the world. It assures for all time the reverent custody of the gift that passed from the bard's own hand to Robert Riddell, thence to Doctor Currie, and

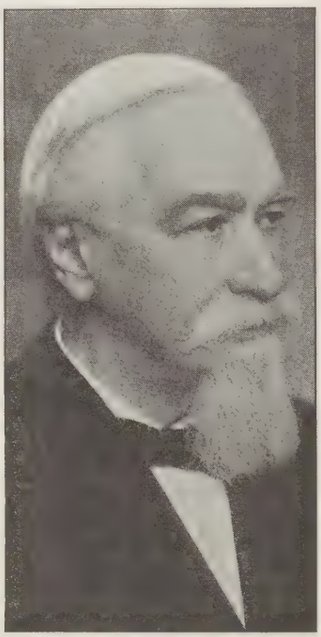
finally to the Liverpool institution, whose virtual repudiation of the sacred legacy has aroused such widespread condemnation. Wherever the two volumes may be housed, and whatever the organization appointed to the faithful curatorship, they will be accessible to pilgrims from all parts of the earth with whom the writings of the inspired plowboy are a household word. All lovers of Burns everywhere must hold in grateful recollection the name of the American benefactor who has made to Scotland with princely generosity a gift of well-nigh inestimable value."

TO SIMPLIFY SPELLING FOR INDIA

A PLEA for the reform of English spelling comes from a most unexpected quarter—no other than India, where there are advocates of English as the universal tongue for this Eastern domain. Sorab P. Kapadia, the editor of *Sanj Vartaman* (Bombay), a daily evening paper, published in the native language, the Gujarati, writes for the eight millions of Hindus, Mohammedans, and Parsis who speak this tongue—one of the principal languages of the Bombay Presidency. He reminds us how our problems are theirs also, and urges a strong reason for our courage in leading the reform to make their burdens lighter. We read:

"Just as the question of an international language is occupying the attention of the scholars of the West, who, I regret, seldom take into consideration the millions inhabiting the East, so, too, a universal language for India has been discust here these last two decades. In India there are so many languages and dialects (I think there are about 300) that a native of Bombay Presidency, speaking either Gujarati, the Marathi, or the Urdu (three principal languages), is hardly able to converse with a Madrasi, Telangu, Bengali, or Sindhi who are living say only 400, 500, or 300 miles from his native place. I should think there is no country where the need for a common language and common script is so urgent as in India. For commercial, industrial, social, and political intercourse, the advantages of a common tongue will be far greater in India than in Europe. Public opinion is in favor of such a language, but we have been unable to adopt one language for the whole country because claims of rival languages are so many and difficulties are so varied that I do not think this problem will ever be solved. Just as the French is spoken more or less all over Europe, Hindi is spoken or understood over many parts of India, and if there is any chance Hindi might become the common language, but the difficulty comes in the way of the script. If 60 out of 100 persons can speak and understand Hindi, only six know how to write it.

"I am one of those who do not favor any of the Indian languages being adopted for a common purpose. I have always advocated in my paper that if there is any language that will be and should be the universal language for India, it is the English language; the language of our ruling class, the language of the official world, the language of the courts, the language of British Parliament, to which we Indians look as the highest tribunal for redress of India's grievances. In spite of its inherent difficulties the English language is spoken and written by thousands of Indians as ably and efficiently as any English-born scholar. Indians have shown a remarkable aptitude for learning the English language and its precious treasures of literature; the English language has a great future in India, and when our benign British Government makes mass education free and compulsory, millions of numbers will be added to the 150 millions (reckoning white men alone) that are now speaking this remarkable language. My object in writing these few facts is that India and its people should be included in the movement for the reform of English spelling. It would render yeoman service to the cause of dumb humanity of this vast country, and help the efforts to spread English education in the land."



GEORGE A. HEARN,

One of our late merchant princes to whom "the message of great art was a very vital thing."

OUR ART-LOVING MERCHANT PRINCES

THE DEATH of Mr. George A. Hearn, following closely upon that of Mr. Benjamin Altman, brings into conspicuous notice a class whom the New York *Evening Post* editor calls "the merchant collector." Upon him is levied a peculiar form of tax of which the Metropolitan Museum of Art constitutes itself the most successful collector. Mr. Hearn has been a generous donor to this museum. Something like fifty paintings, mainly by American artists and English of the eighteenth century, already hang there as his gifts. What he left behind have not been specified by will as bequeathed to the public, but it is thought not improbable that eventually they will reach some such destination in obedience to an unwritten law concerning important aggregations of art works. Without these residuary works, however, Mr. Hearn's gifts already rank his name with the John S. Kennedy bequest, the Rogers bequest, the Morgan and Altman collections, making, says the writer in *The Evening Post*, "the comparison with the art-loving merchant princes of Florence and the Netherlands something more than a simile." These names and the deeds they represent induce some comments upon questions of international esthetics:

"In spite of names like those we have cited—of men whose fortunes testify to a very close application to worldly affairs, from which they could yet spare time for the finer things of life—there is no reason to suppose that the facile satire of the foreign critic against money-grubbing America will disappear. The transatlantic tourist will continue to inveigh against our crass materialism as revealed particularly in our indifference to the beautiful; and we presumably will continue to laugh. After all, it is not America as the land of business that has been the victim of the esthete's ire. The man of business all over the world has come in for the same kind of objurgation. It is the established formula in the psychology of artists to inveigh against the depressing effects of the middle-class spirit. The philistine, the bourgeois, *voilà l'ennemi*. This, to the entire obscuration of the very hard fact that it is on the patronage of the well-to-do merchant and industrialist that art has long been thriving. The patronage of royalty and the nobility is relatively a thing of the past. Royalty and nobility, nowadays, work for the dissemination of art largely by selling their art treasures at fancy prices to the middle classes.

"We need not exaggerate. Love for the beautiful is not the only factor in the art-impulse of our men of wealth. The creation of great galleries may frequently be due to the passion for display. The newly-rich from Oil City and Goldfields may look upon a rare collection as necessary for their station in life. Even more than yachts and racing-stables, the amassing of old masters has become the sport of money-kings. The criticism has been directed, and with force, against the late Mr. Morgan that his munificent patronage did not extend to living artists of merit; the inference being that his sensitiveness to beauty fell short of the point where it needed no great reputation on the part of an artist to justify the collector's judgment. But there are patrons and patrons. In the case of Mr. Hearn, as in that of Mr. Altman, there is every reason for believing that the message of great art was a very vital thing to them. They gave years and thought to the gathering of their treasures. They lived with them. Certainly, their example disproves the easy assumption that business is fatal to the gift of esthetic enjoyment. There have always been men whom precisely the strain of the market-place has driven for recreation to their libraries and their picture galleries. Balzac knew such men, and knew that our 'ugly' commercialism need not be destructive of the feeling for beauty."

Criticism of unartistic America is justified to the extent,

admits the writer, that our patronage of the arts outruns our enjoyment of them:

"We have a sufficiently large leisure class—using leisure in the sense of wealth—to purchase great paintings, but not a sufficiently large leisure class to allow art to enter into their intimate life. And yet it is obvious that the one class is helping to develop the second. The great collections are steadily drifting into the public galleries for the enjoyment of the multitude. The stewardship of wealth, about which a great many empty phrases have been written, is realized in the munificent patronage of our universities and our museums. That part of a multimillionaire's estate should go to the endowment of an institution of learning no longer arouses comment. Yet there is no general tendency to assume the endowment of colleges as a matter of obligation. Whereas, with respect to a great collection of art, people have come to regard it as a matter of course that it should ultimately pass into the possession of the public."

GAINSBOROUGH'S "BLUE BOY."

One of Mr. Hearn's most conspicuous possessions—a replica of the famous picture in the collection of the Duke of Westminster.

NEWSPAPER ENGLISH

A FEW WEEKS AGO the professors of certain Middle-Western colleges were differing with one another on the subject of baseball slang; now they have fallen afoul on the whole subject of newspaper English. Professor Scott, of Michigan, accuses newspaper men of an utter want of scruples in the use of the mother tongue. He deplores the use of such words as "transpire," "inaugurate," and "enthuse." Over against him is Professor Beckham, of Iowa State College, who glories in the fact that the newspapers are reshaping the use of written English in the interest of simplicity, directness, and vigor. The science of journalism, points out the Indianapolis *Star*, is now taught in eighteen colleges and universities in the United States, and the professors in charge of this branch of education lately met at Madison, Wis., to confer. Their exchange of opinion has been watched with interest, naturally, by the people most concerned. Professor Beckham seems to win approval in his indictment of ordinary college English as "often too diffuse for newspaper use and lacking in clearness." *The Star* interprets him:

"Professor Beckham says that with all its faults he believes in the news style as the most efficient style of this modern day for presenting information through the written word. It has been hammered out in the heat and stress of newspaper work, he says, to meet the demand of the millions for something to compel their attention, interest them, and give them information in the quickest, clearest way possible. 'It is the news sense,' he adds, 'that enables the writer to see through a mass of non-essentials to the essentials, through dead rubbish to living facts, through husks and shells to the kernels of truth.'

"It is the fashion in certain 'highbrow' circles to sneer at newspaper English, but the persons who are so quick to point out its faults would be the first to criticize it if it were of the discursive, 'literary' style they sometimes admire in books, full of unnecessary detail and interesting more for the beauty of diction than for the thought or fact set forth. And these critics are accustomed to read and admire books written in a clear, incisive, vital style, which is no other than newspaper style, tho the readers do not recognize it as such.

"The book has had the advantage of rereading in manuscript and of careful proof-reading, not always possible in the haste with which newspaper 'copy' must be prepared and rushed into print, but the great probability is that the writer learned his skill in a newspaper office, many of the leading authors of the country having served this apprenticeship. Newspaper English has its faults, but it certainly has the merit of telling people what they wish to know in a concise and understandable way."

Somewhat more non-partizan is the Chicago *Record-Herald*, which balances the views of the contending professors:

"Both speakers are right; neither is wholly so. The newspapers are obliged to plead guilty to the charge of using slang, tho the guilt is by no means equally shared by all. Cultivated persons occasionally use slang just to avert suspicion of too consciously avoiding it. It is a concession they make to the living side of language, a recognition of the truth that language was made for man, not man for language. On the other hand, the merely decorative and the swollen phrase are rarely met with in newspaper-writing. Space is valuable; the writer must come to the point. Vigor is achieved by omission of the unnecessary, and the short sentence, crisp and immediately intelligible, results."

A "Grumbler" from the East is drawn into the discussion and sends to *The Public Ledger* (Philadelphia) a protest against the newspaper's "ridiculous readiness to pick up and give currency to any new locution, no matter how senseless." Thus:

"When the battle-ship fleet in Roosevelt's Administration made its famous voyage around the world somebody used the word 'cruise' in relation to the trip. At once every newspaper took to using the word as equivalent to 'voyage.' Only lately I read in some Philadelphia paper that the cruiser *Chester* would 'cruise' to Pensacola from League Island. Now, any one who will think for a moment knows that 'cruise' does not mean to go somewhere with definite leaving and arriving time. A whale-ship cruises. She may go from New Bedford on a two- or three-year cruise and will sail about so-and-so long in such a part of the ocean and then go, about such a time to an agreed point, where the captain may communicate with his owners, and then, if not ordered home, he will cruise again. But a ship which leaves League Island for a definite port and is to go straight there does not 'cruise.' . . . . . .

"The trouble, I believe, comes from our schools, which are so encumbered with nonsensical stuff forced in by the faddists that they only half do their work. A pupil should leave school with a mind accustomed to think and select that which is good and reject that which is bad. As a rule, the graduates of our high schools have no definite knowledge of the meaning of words they use every day."

RELIGION AND SOCIAL SERVICE

"THE LOVELIEST OF RAFFAEL'S VIRGINS"

IT WAS a copy of the Bible that established the world's record price for a single costly book at the Hoe library sale, and this fact was commented on with satisfaction by a number of writers in the daily press, since the dollar is so prominent a modern criterion. The same feeling of satisfaction may perhaps be aroused by a new record price for a picture—over $500,000 for a "Madonna," by Raffael. At this season of the year the event is of interest to the whole Christian world. The picture in question is known as "the Cowper Raffael" because it has long been the chief treasure of the late Earl Cowper's collection at Panshanger, Hertfordshire. The picture is on a panel measuring 23 inches by 17, and experts declare it is the last painted by the master himself that remains in private hands save one owned by Lady Mond but already bequeathed to the National Gallery in London, and one owned by Mrs. John L. Gardner, a portrait of the Vatican Librarian Inghirami and her predella piece, which it is believed will ultimately go to an American museum. Further facts in the history of the Cowper Raffael are here given by the New York *Times:*

A NEW "MADONNA" FOR AMERICA.

Classed with some of the other famous Raffaels, among which is the "Belle Jardinière" of the Louvre and the "St. Catherine" in the National Gallery.

"The 'Small Cowper Madonna,' painted in 1505 by Raffael, and since 1835 the most prized painting in the famous Panshanger collection of the late Earl Cowper, has been sold to Duveen Brothers of New York, London, and Paris, was announced in London. The report was verified in New York.

"Lord Desborough, the nephew of the last Earl Cowper, who inherited the picture upon the death of the Earl's wife, Countess Cowper, last year, made the sale, and, according to authoritative information, received something over $500,000 for the picture.

"The picture has been described as one of the most valuable in the world. Many collectors who tried to buy it before it fell into the hands of Lord Desborough found it literally 'priceless.'

"Louis Duveen, a member of the firm, had been in London for some time negotiating for the purchase of the picture. . . . It was further learned that Duveen Brothers have made the purchase for themselves, and not as agents for any one in England or America.

"Altho the price actually paid for the picture could not be learned yesterday, it was said on good authority that 'the largest sum ever paid for a painting' had been given to Lord Desborough for his 'Madonna.' This would make the price something over half a million dollars if the report that P. A. B. Widener, of Philadelphia, paid that amount for Rembrandt's 'Mill' in 1911 is correct, and it has never been denied and is generally believed.

"The Cowper 'Madonna' is said to be the most valuable and important painting in private hands in England, and, if it comes to America it will, of course, hold that distinction here. That it will come to America seems certain since the National Gallery, in London, has been unable to exercise the option of purchase granted to it at the price paid by the Duveens. It is possible, however, that an attempt may be made to raise the purchase price in England by subscription. If this subscription is not raised in two weeks, however, the 'Madonna' will be seen shortly afterward in Fifth Avenue.

"The 'Small Cowper Madonna' is classed as of the same period with three other famous Raffaels, including the 'St. Catherine' in the National Gallery, London, and the 'Belle Jardinière' in the Louvre, Paris.

"Little is known of the history of the painting until the great-grandfather of the last Earl Cowper made his famous Panshanger collection in 1835 while British Envoy at Florence. The 'Madonna' was purchased by Lord Cowper, with many other paintings by Italian masters, and taken to his estate of Panshanger, Hertfordshire. The collection soon became known as one of the most valuable in existence.

"When the last Earl Cowper died, in 1905, the collection became the property of Countess Cowper, his widow. Throughout her life she valued it as the most priceless of her possessions and vowed that none of the paintings in it should be sold while she lived."

The London *Times* speaks in this vein:

"The picture is, in the unanimous opinion of critics, one of the most precious pictures by Raffael that has come down to us. In 1854 Waagen wrote most enthusiastically of the picture. Passavant, Crowe, and Cavalcaselle, and more recent writers have extolled it; while Morelli called it 'The loveliest of all Raffael's Virgins.'"

RELIGIOUS NOTE IN RECENT FICTION

JUST as the predominant interest of the nineteenth century was scientific, "so that of the present century is to center around religious themes and to be moved by religious inspirations," believes the editor of *The Congregationalist* (Boston), and he finds a clear indication of it in the religious tone of present-day fiction. We must agree, he thinks, that "nothing is more barometric of human interest than the world of fiction." Very well, then, "consider the books that have recently headed the list in public interest":

"'The Inside of the Cup,' which discusses definitely moral, religious, and humanitarian problems, a book which is being used to guide discussion in Bible classes, the book which has without doubt stirred up more conversation between man and man than any other one book in a decade, a definitely religious book, with a title taken from the gospels; and almost equally popular, if not equally provocative of discussion, 'V. V.'s Eyes,' that fine story of the working of the Christ spirit in the solution of modern social problems, a novel that closes with a gospel quotation which sums up the whole purpose of the narrative. That, too, was a best seller."

Only a few years ago, we are reminded, "it was rare to hear the religious note in fiction."

"Men wrote about human sorrows and temptations and inspirations, and the 'visitor from Mars,' reading their books, would never have dreamed that religions and Sundays and worship and churches and the teachings of Jesus existed. Such topics were carefully avoided. But now, in fiction and drama, the inspirations of religious faith, the warnings of religious instruction, and especially the social teachings of religion are coming to the fore and holding the center of attention. Even the titles of books attract by their religious significance: 'The Inside of the Cup,' 'The Woman Thou Gavest Me,' 'The Servant in the House,' 'The Son of Mary Bethel,' 'The Fool in Christ,' etc. And these books abound in quotations and incidents which can only be apprehended by one who knows the Scripture to some extent. . . . . .

"Another modern novel, 'The Way Home,' by Basil King, centers around the relations of church and pastor and questions of religious belief, not in order to present arguments for agnosticism, as was the general case only a short time ago, but in order to show that 'saying that beliefs are untrue does not make them so,' and the only Way Home is by the old way of simple faith in Christ.

"Remember also the popularity of such dramatic presentation of religious themes as appeared in 'The Servant in the House,' by Charles Rann Kennedy, or 'The Passing of the Third Floor Back,' by Jerome K. Jerome, or the remarkable interest which was shown in the revival of 'Everyman.'"

And it may be the most significant fact of all, according to this writer, that this revived religious interest is not confined to English-speaking lands. As we read:

"There is 'The Fool in Christ,' by Hauptmann, the German, in which the idea of the reincarnation of the spirit of Christ is the center of the story; and 'John,' by Sudermann, which contrasts the method of the spirit of John the Baptist with the conquering power of him 'whose sword is called Peace and whose battle-cry is Mercy.'

"In France there is Rostand, characterizing the personality of Jesus, and summarizing his teachings in 'The Samaritan'; and in Russia, Andreyev, in 'Judas Iscariot,' portraying the conflict between the two realms of action revealed in the contrasted personalities of Judas and Jesus, with a wonderfully beautiful revelation of the charm of Jesus; and Selma Lagerlöf, of Sweden, with her 'Anti-Christ,' an attack on Socialism for the purpose of showing its inadequacy as a solution of human problems and the final ascendency of the Christ and his Kingdom; and Pontoppidan, of Denmark, with his story of 'The Promised Land,' in which the hero seeks the solution of his doubts and the ground of his hopes in every direction, and finally learns that the longed-for Savior of humanity is Jesus of Nazareth.

"With these might be mentioned many others, like Frenssen, of Germany; Widmann, of Switzerland; and Fogazzaro, of Italy."

Here, then, are indications that no other character "so dominates the dramatic world as Jesus," that no personality "so holds the place in the center of the masterpieces of fiction," that there is "no spirit so often chosen for the inspiration of modern creative art as the spirit of Christianity." Men like Churchill, Harrison, Comfort, Begbie, says the editor of *The Congregationalist*, "striving to deal with the contradictions and unbearable conditions of modern social life, see the glimmer of truth that only in Christ is to be found the hope of social reformation."

"They voice the modern spirit and the common feeling to-day. We have much to learn, much in the way of application to the fundamental necessity of character and individual personality, as well as in social reorganizations, but we are on the right road and faced in the right direction to discover the ultimate solution in the teachings of Christ and in his Kingdom."

AN UP-TO-DATE NEW TESTAMENT

EVEN in our "American Revised" version of the Scriptures there is an attempt to preserve the time-hallowed characteristic flavor of the King James Bible. So *The Christian World* (London) thinks that the latest serious and reverent effort to turn the Greek of the original into the common prose of to-day "is bound to be of great interest, and both students of the Greek Testament and ordinary English readers will find this version full of new light and suggestion." Dr. James Moffatt, professor of Greek and New Testament Exegesis in Mansfield College, Oxford, who has prepared this translation independently, says he has "attempted to translate the New Testament exactly as one would render any piece of contemporary Hellenistic prose." For one thing, observes *The Christian World*, he "has avoided the absurdity of trying to use a single English word as the equivalent for a particular Greek word." One Greek word, for instance, is sometimes rendered "*pagans*" instead of "*gentiles*" as—"Do not pray by idle rote like *pagans*." Other "happy renderings" quoted are, "Do not *trouble about* what you are to eat in life," "If your right eye is a hindrance to you." And here is the Matthew version of the Lord's Prayer as translated by Dr. Moffatt:

"Our Father in heaven, Thy name be revered, Thy Reign begin, Thy will be done on earth as in heaven! Give us to-day our bread for the morrow, and forgive us our debts as we ourselves have forgiven our debtors, and lead us not into temptation but deliver us from evil."

A great passage like Romans viii, continues *The Christian World*, "both gains and loses in Dr. Moffatt's version, and his rendering of 1 Cor. xiii is certainly good to set side by side with the Revised Version, if it does not supersede it":

"Love is very patient, very kind. Love knows no jealousy; love makes no parade, gives itself no airs, is never rude, never selfish, never irritated, *never resentful*; love is never glad when others go wrong, love is gladdened by goodness, always slow to expose, always eager to believe the best, always hopeful, always patient. Love never disappears."

Such passages as these, says *The Christian World*, "help to show how much freshness and light there is in Dr. Moffatt's scholarly and often happy turning of the Greek into English." Tho, it adds, "his judgment may not always be unerring"—

"'If salt becomes insipid' is not an improvement, and is no more intelligible than the old phrase; and if this is altered, why is 'all *manner* of evil,' two verses before, allowed to remain? One serious blemish of the translation is the persistent use of the Scotch *will* for *shall* in the first person future; and similarly *would* for *should*."

But the article in *The Christian World* ends—

"On a note of thankfulness for the great and solid gain of this translation. We hope other competent and leading scholars will give us their independent versions of the New Testament, for they will all help toward that new and definite Revised English New Testament which we hope, before many years, will be given us by the consensus of the best authorities."

PITTSBURG'S HOUSECLEANING

TO FIND a twin city like Pittsburg and Allegheny supporting 247 immoral houses on thirty-four streets, with a toll of inmates numbering approximately 1,000 girls, was a challenge to any "morals-efficiency commission" to justify its name. In eighteen months the justification has been accomplished by these western Pennsylvania cities to the extent that at the writing of *The Survey* report the number had been reduced to 71 houses, on six streets, and 333 girls. The New York *Evening Post* gives a summary of the means taken that may be valuable to workers in other cities. We read:

"The Commission set to work with an open mind. Without concluding that either segregation or elimination was the ideal condition, it adopted the very practical method of proceeding step by step, choosing as a motto, 'gradual restriction leading to ultimate elimination.' The Commission first decided, and so recommended to the Police Department, that all disorderly houses in residential sections of the city should be eliminated as speedily as possible, particularly in the streets where the poorer people live; that professional immorality in tenement-houses, along a street-car line, near any school, hospital, or charitable institution, must be stamped out. Other restrictions upon houses and individuals were established, and imposed with increasing severity, gradually drawing the lines closer and closer. No new houses were permitted to open, and professionally immoral women, once leaving the city, were not permitted to return. This was later extended to deny a return to Pittsburg of persons who had gone elsewhere and wished to come back. No landlady nor girl was to keep a pimp. Liquor and soft drinks were banished absolutely, and every form of dancing, show, or music was strictly forbidden. Minors were to be denied admission, every unsanitary place was to be closed; houses paying exorbitant rents were recommended for closing, and pedlers were excluded.

"The above steps were taken, each as soon as it was felt that it could be properly attended to. They were preliminary toward eliminating the vice problem from Pittsburg. As a result, the backbone of commercialized vice was soon broken."

The police are credited with carrying out the suggestion made to them, but "five of the nine men on the Commission made frequent trips to the temporary segregated district, and never less than once a week, two of the members went together with the detectives to see to the enforcement of the recommendations given to the police." But—

"The attempt to handle the medical side of the problem ended in failure. . . . . .

"Last February the Commission was ready for another step, and voted in favor of closing on May 1 all houses on the North Side, Allegheny. The ninety-one houses in existence on May 1, 1912, had been decreased by the various recommendations to twenty-five, and on May 1 all of these were to close. Every house was visited during February by members of the Commission, and the inmates were spoken to individually; urged to save money and think of their future. Every such person in Pittsburg was similarly spoken to, and told that the same recommendation might at any time be made for Pittsburg itself. The members of the Commission were so satisfied with the closing of Allegheny and its infested spots being wiped out, that, had they remained in power, they would have voted to close the entire city in the near future.

"As a result of its experience, Rabbi Coffee explains, the Commission had a bill introduced in the State legislature, then in session, providing for a Morals Bureau, to consist of seven members, three of whom may be women, to serve without pay. A superintendent of morals was to be under the Morals Bureau, with salary of $3,000, and a staff under him to handle the situation. They were to be removed from politics. The bill became a law, and the newly elected Mayor will no doubt appoint the members of the bureau soon after the first of the year. Another bill introduced in the legislature required a health certificate prior to the granting of a wedding license. A compromise bill was passed, being a step in this direction. A bill was introduced requiring report of the diseases of immorality, like other communicable diseases, but failed of enactment.

"The Commission never believed that legislation was a cure-all for social evils, but felt that education must go together with it. Therefore, earnest efforts were made to educate the people about the dangers of immorality; but far more attention was paid to the positive side, the instruction in sex hygiene. Many prominent churches were open to members of the Commission, who also delivered addresses before all the leading women's clubs, started a movement for instruction in the high schools, and by constant effort awakened a deep interest in the subject throughout the city. One member of the Commission wrote a play which deals with the value of sex education and the folly of physicians remaining quiet when a word would prevent innocent girls from marrying moral lepers."

Some other measures were proposed by the Commission, such as—

"To provide that all transfer companies shall report the names of persons having furniture moved, giving old and new addresses; policemen were to report daily the names of persons moving from and to their beats; every lodging-house was to have a license, revocable for cause; employment agencies were to be closely watched, as well as registered; physicians were argued with, and many have revised their idea of 'ethics' which led to their being silent accessories to infection through unsafe marriages.

"As a result of these activities on the part of the Commission, the business of professional vice has visibly diminished. Dr. Coffee admits the presumption that with 70 per cent. of the immoral places closed, other forms of vice would thrive, but he insists that such was not the case, and that it proves that, as he expresses it, 'not the desire of man, but the vicious zeal of commercializers, is at the bottom of this traffic. Cut out the money end, and the normal demand is but a fraction of the business. One very salutary effect is the certainty that many boys, who might otherwise have been lured there for the first time, have never visited these houses owing to the strict watch for minors.'"

THE CATHOLIC ITALIANS

THE CATHOLIC PRESS seem to think that the editor of *The Catholic Citizen* (Milwaukee) has rather put his foot in it by writing an editorial on Catholic Italian losses in which he drew his facts from Protestant sources and ignored the official directory of his own Church. The Milwaukee editor may have intended to stir up his fellow workers to greater efforts by drawing a dark picture, but *The Catholic News* (New York) thinks he shouldn't have gone to Protestant palettes for paint to make his picture darker than need be. For example, the Milwaukee writer declared that, of 80 Italian newspapers in the United States, "not a single one is religious or Catholic." In reply the New York editor names five, ranging from San Francisco to New England. Then the Western editor said there were 23 Italian Protestant churches or missions in Greater New York in 1908 to only 19 Catholic—the New York editor finds in the Catholic Directory of that year that there were 31 of the latter, "besides the Italian chapels and the English-speaking churches to which Italian clergymen are attached." Again:

"*The Catholic Citizen*, on the authority of *The Missionary Review*, says that the Italian Protestant churches in the United States are 250, and then adds: 'We can not count more than 150 Italian Catholic churches in the United States.' The editor of *The Catholic Citizen* is requested to consult the Catholic Directory of 1913; he will certainly find that, in the ecclesiastical provinces of New York, Boston, and Philadelphia, there are 213 Italian churches with 63 chapels and 19 American churches where Italian priests are engaged in caring for the Italians. In addition to this there are 10 day nurseries, 4 orphan asylums, 55 parochial schools with 18,313 children, and 1 college."

The New York writer goes on to ransack the Official Directory for figures showing a brighter picture than was visible from Milwaukee, remarking rather pointedly that "it seems that *The Catholic Citizen* blindly believes every statement made by non-Catholics in reference to the Catholic Italian losses," and closes by pointing to the 100,000 Italian children in the public and parochial schools of New York as a guaranty for the future.

WINTER TRAVEL

ATTRACTIVE TRIPS TO FAMOUS RESORTS

THE season for tourist travel is on; more auspiciously than ever before has the winter migration opened, and more attractive than in any previous year are the trips offered by steamship and railroad companies. Whether it be a forty-eight-hour jaunt to Bermuda or a trip around the world, an excursion to Washington or to the Pacific Coast, the attractions are greater and the comforts have increased, while the cost, in many instances, is less than previously.

"Go South" is the cry this season. Ever since Morgan, Captain Kidd, and others of their class were driven from the Spanish Main, its beautiful islands and shores have been a Mecca of tourists. But this winter brings renewed interest in the West Indies. The Atlantic and the Pacific have been united by an artificial strait. The dream of Balboa is realized and the Panama Canal is a fact. The first ship has passed from Cristobal on the Atlantic coast to Balboa, the new town at the Pacific entrance. The Continental Divide has been severed and a grand cañon cut through Culebra. The waters of the Chagres have been harnessed, and instead of devastating the greater part of the Isthmus, they now spread out in a beautiful lake upon whose broad breast the commerce of the world will soon pass. American enterprise has triumphed where all others failed. Secretary Garrison announces that the Canal will be opened for traffic next February, a year ahead of time. He estimates that it will have cost $10,000,000 less than the $375,000,000 which Congress authorized for its construction.

SCENE IN COLON PARK, HAVANA.

To see the Canal in the year of its birth is the ambition of all Americans. The steamship companies have prepared to carry great numbers, and the hotels on the Isthmus are ready for them. The new hotel at Colon is now open and receiving guests. It is larger and finer than the one at Ancon. Both houses are owned by the Government, and are under Government management. Tourist travel to Panama has increased rapidly within the past four years. In 1910, 12,316 sightseers visited the Canal; 1911, 15,790; 1912, 20,496. For the first six months of 1913 there were 18,972 visitors, with every indication that the number would reach 50,000 before the first of the year. From that time on there will be a rush to the Canal, so that 1914 will unquestionably break all records.

PANAMA AND THE WEST INDIES

Most of the important steamship companies are sending ships to Panama this winter. The North German Lloyd will temporarily detach the *Grosser Kurfuerst* from the London-Paris-Bremen service for three cruises to the Caribbean; the Hamburg-American will have four cruises from New York by *Victoria Luise*, two from New Orleans by *Fuerst Bismarck*. The White Star Line will have five cruises by the *Laurentic* and *Megantic;* the Royal Mail Steam Packet Company ships sail every alternate Saturday and touch at Colon, while the "Great White Fleet" of the United Fruit Company has two sailings a week to the Isthmus. The Red Cross Line will have one cruise to the West Indies by the S. S. *Stephano*, and private-tour concerns are interested in other cruises.

Bermuda still retains its grip upon the public. The fairy islands will be well patronized this season. The Royal Mail Steam Packet Company and the Quebec Steamship Company between them will have three sailings a week with the *Arcadian*, *Caribbean*, and *Bermudian*.

INTEREST IN SOUTH AMERICA

Great interest centers this year in South America. The presence of ex-President Roosevelt has brought the sister republics into the public eye. Few realized, before, that South America possesses some of the largest and most beautiful cities in the world, some as gay as Paris. The Lamport & Holt Line, by which Colonel Roosevelt and his family traveled to South America, has sailings on alternate Saturdays by excellent steamships, including the *Vestris*, *Van Dyck*, and *Vauban*. The North German Lloyd, too, has entered the South-American field with a fleet of new ships which sail from Bremen. Through tickets from New York to South America via Europe are sold here at remarkably low rates by this line.

South America, as already said, is forging to the front as a resort for the tourist. Americans, are awakening to the wonderful beauty and picturesqueness of the lands south of the equator. Few people realize that there are cities of over a million inhabitants each, with streets of mosaic tile and lined with royal palms; theaters and opera-houses as magnificent as those of any city in Continental Europe; hotels as fine as the most famous in New York, and scenery as sublime as the Alps or the Rockies.

Writing in *The Outlook* of his trip, Colonel Roosevelt, who is now in South America, says: "It is astonishing how comparatively few of our people realize that it is now as easy and comfortable to go to South America as to Europe; and it is no less astonishing for those of us who are past middle age to realize how very easy and very comfortable traveling has become. On such a steamer as the one on which we took our passage, clean, roomy, with everything to add to the mechanical attractiveness of life on the steamer, I rather hesitate as to whether 'luxury' is not a more appropriate word than 'comfort.'

"The direct trip from New York to Buenos Aires or Rio de Janeiro is delightful. Not only is this route bound to become a traffic route in the near future, but it is bound to become a great passenger route. It is a delightful trip. Throughout our trip there was no more motion than would have been pleasant on a summer yachting cruise, and no excuse for anybody feeling under the weather. Day after day we steamed steadily through the sapphire seas, while the trade-winds blew no less steadily in our faces."

THROUGH THE PANAMA CANAL

For those who wish to plan ahead, the Hamburg-American Line offers a most novel trip which includes not only the Panama Canal, the world's greatest engineering feat, but most other wonders of the earth besides. Think of boarding a steamer in New York and sailing through the Canal, and then entirely around the world, coming back to New York about five months later. That is what the Hamburg-American Line offers in its "round-the-world" tour which will start from New York on January 31, 1915. On June 4 passengers will be landed at Hamburg, after having nearly circumnavigated the globe, and may complete the trip by

any of the ships of this line. This cruise will be made by the *Cleveland*.

To those who wish to see the Canal this winter the Hamburg-American offers a variety of cruises. Two steamers will be in this service, the *Fuerst Bismarck* and the *Victoria Luise*. The *Victoria Luise* sails on January 14, February 7, March 11, and April 11, touching at many points of interest in the West Indies, allowing a chance to inspect the Canal, and reaching New York on February 3, March 6, April 7, and April 27.

The line also will conduct twelve cruises to the West Indies during the winter by good steamers. Patrons of these tours will see, as they may select, Cuba, Jamaica, the Canal, and, on several of them, Costa Rica, Hayti, Santo Domingo, and Colombia besides.

The *Cleveland* will also leave on January 15 on a cruise to the Orient and India, through the Mediterranean, the Suez Canal, the Red Sea, and the Indian Ocean. The tour includes trips through the Holy Land, parts of India and Egypt, and reveals to the passengers all the mysteries and wonders of the Orient.

The success which attended last year's cruises of the North German Lloyd to the Panama Canal and West Indies naturally resulted in a decision on the part of the company to continue them each winter. Three cruises will be made during the early months of 1914 to those fascinating shores, by the *Grosser Kurfuerst*, which will be temporarily detached from the London-Paris-Bremen Fast Mail service. The company has arranged two of the cruises so that busy business men can see the Canal and a goodly part of the West Indies in three weeks. These short cruises will leave New York on January 14 and March 19. The former will be of 22 days' duration, and the latter 21 days. The cost of each will be $160, and the trip will include Cuba, Jamaica, Panama, Porto Rico, and the Bahamas. The longer cruise, which leaves New York on February 12, will be of 29 days' duration and the ports touched will include Cuba, Jamaica, Panama, Venezuela, Trinidad, Barbados, Martinique, St. Thomas, Porto Rico, and the Bahamas. The cost of this cruise will be $175. On each of these cruises there will be a special conductor who will arrange every detail for the passengers and furnish any and all information that may be desired.

In addition to the Panama Canal-West Indies cruises, the North German Lloyd offers particularly attractive trips to the Mediterranean, Egypt, and India. Steamers of the Mediterranean service sail on Saturdays. The ports of call include Gibraltar, Algiers, Naples, and Genoa. From the two latter ports North German Lloyd steamers sail for Egypt and through the Suez Canal to India and the Far East.

North German Lloyd also offers Independent Around-the-World Trips at the low rate of $617.70. This price provides first-class accommodations from start to finish of the trip. Tickets are good for two years, or the trip can be made in two months.

The International Mercantile Marine, with the White Star, Red Star, and other subsidiary lines, is offering many opportunities for views of the Canal and the West Indies. The line will run nine cruises. The *Megantic* will leave New York January 7, January 31, March 4, and April 4, the first cruise being of 21 days' duration, the second and third of 28 days, and the fourth of 16 days. Cuba, the Canal, Jamaica, Porto Rico, Bermuda, Trinidad, Barbados, St. Thomas, and Martinique will be among the places yisited. The *Laurentic* will leave New York on January 17, February 11, and March 14, on cruises of 22 days, 28 days, and 23 days, touching practically the same points as the *Megantic*.

The "Great White Fleet" of the United Fruit Company touches practically every port in the West Indies and along the northern coast of South America. The beautiful steamers of this company carry a limited number of passengers, so that overcrowding is unknown and there is always an abundance of deck-room. Sailings from New York are made every other day, while the various services also include ships from Boston and New Orleans. Special cruises to the Panama Canal are offered by the United Fruit Company. Among the best-known steamers of this line are the *Tenadores* and *Zacapa*, the former plying between New York and Kingston, Colon, Bocas del Toro, and Port Limon, while the *Zacapa* includes in her trips Kingston, Colon, Cartagena, Porto Colombo, and Santa Marta.

The ships, *Emile L. Boaz* and *Carl Schurz*, have been purchased for European service from the Hamburg-American Steamship Co., by Elders and Fyffe of London, a firm closely affiliated with the United Fruit Company of this country. The last named company have just placed an order with Belfast shipbuilders for three new ships, each ship to have fifty-one staterooms, all with baths.

WONDERS OF THE ORIENT

To those who prefer the delights of Continental Europe and the Mediterranean, the International Mercantile Marine offers alluring cruises by the *Celtic* and *Adriatic*. The *Adriatic* leaves New York on January 10 and February 21, and the *Celtic* on January 24 and March 7. Those who go on one of these cruises will see the Azores, Madeira, Gibraltar, the Riviera, Monte Carlo, Genoa, Naples, and other parts of Italy, Algiers, and Egypt, the whole forming one of the most interesting and comprehensive itineraries imaginable. Cruises will also be run from Boston by the *Cretic* and the *Canopic*, covering the same points of interest.

The Mediterranean, Egypt, the Holy Land, and India offer an unlimited field for the winter tourist. Rome, Naples, Pompeii, Athens, and Cairo are attractive to lovers of travel who find it almost impossible to keep away from them. The Riviera attracts fashionable people, but Algiers threatens to win away some of its laurels. The well-to-do of Europe who travel are now flocking to Algiers, where the latest creations of Paris and London mingle with the fantastic costumes of the Moor and Arab. Here East meets West as the automobile whizzes past the camel train. The Cunard, White Star, and Hamburg-American will have special Mediterranean cruises, while the North German Lloyd has a regular Mediterranean service

Robust Health

Is built principally upon the sturdy foundation of

Right Food

Purity first—then nutrition to meet the law of daily waste and repair of body, brain and nerve cells. But,—the food must contain all the essential elements, or there cannot be robust health.

Injurious preservatives are not permitted by the pure food laws; but the law does not prohibit millers from leaving out of some kinds of flour certain parts of the wheat berry which contain vital mineral salts—grown in the grains by Nature—and necessary for the normal balance of body, brain and nerves.

This lack in daily food is responsible for many common ailments.

Grape-Nuts

FOOD

made of whole wheat and malted barley meets every requirement. It has delicious taste and retains in perfect balance all the nutrition of the grains, including the mineral salts—thus admirably supplying what many foods lack.

For robust health try

Grape-Nuts.

"There's a Reason"

PERSONAL GLIMPSES

ADVENTURES OF A CHAUTAUQUA ENTERTAINER

PROFESSIONAL life on the Chautauqua circuit may not be as exciting as somersault aeroplaning, but it is not always what might be called hopelessly tame. It must be rather lively and interesting sometimes, if we are to take Lee Shippey's word for it. Mr. Shippey could not acquire wealth as rapidly as he wanted to as editor of a country newspaper in Missouri, and decided to follow for a few summer weeks the example of Secretary of State Bryan, Senator La Follette, and other distinguished men and supplement his income by amusing, enlightening, and uplifting rural and small-town people with wit, wisdom, and eloquence. He had many ups and downs, most of his downs being due to stage fright. The story of his adventures appears in *Collier's Weekly*, from which we quote in part:

It was not my fault that just as I neared the climax of one of my few serious passages, a bee, drifting idly through the tent, mistook my left ear for a blossom. It was not my fault at all, but it spoiled the prettiest thing I had to say. Nor was it my fault that during another serious moment four babies began to wail just before I reached that part of my monolog where I remarked there is a crying need for more capable mothers in this country. It was not my fault, but four women with babies in arms streaked indignantly out of the tent, and the whole crowd seemed to think it was an intentional insult.

After it was all over and I was sneaking away with my hat pulled far down, I fell in behind a farmer and a country merchant—the country merchants usually close up their stores to attend the Chautauqua sessions—who were talking about me. Said the merchant:

"Well, what do you think of the way that feller run the gamut of emotions?"

Said the farmer:

"Well, I reckon he run 'em all right, but it didn't strike me he quite caught any of 'em."

The talent for one day's program usually travel together. I was traveling with an imitator and a magician. The imitator preluded for me in the afternoon and for the magician at night. The magician had to carry a trick trunk and a coop of fowls and rabbits which nightly he pretended to extract from the backs of small boys' shirts and to find nesting in women's hats. That made a good deal of excess baggage, so he and his assistant, the imitator, and I bought our tickets together and checked the baggage on the four. That night was one of the nights which make Chautauqua work unpleasant. We had to leave the town we had played at eleven o'clock, arrive at a transfer point after midnight, leave there at 1.30, arrive at another transfer point at four, and get at a quarter to five a train from there to the town to which we were going. When we arrived at the second transfer point we found we would

The Christmas Razor

"My Gift to Daddy"

NOT only on Christmas morning, but ever afterwards, he will experience the greatest joy in the use of this most welcome gift. The new model AutoStrop Safety Razor is adjustable for all beards. Each *12 blades* are *guaranteed to give 500 velvety, cool shaves.* Some men use one blade a year. A variety of handsome silver- and gold-plated outfits to choose from. $5 to $19. Send for catalogue. Sold by all dealers.

E. T. BURROWES CO., 710 Center Street, Portland, Me.

have to go three-quarters of a mile to another station. The station at which we had arrived was on the outskirts of the town, and no conveyance for either ourselves or our baggage was there. There was no telephone service after midnight, and the only drayman lived on the other side of town. The time was short. There was nothing for it but for us to take up our baggage and walk.

The trunk was a good deal heavier than the coop, so it was decided two of us should take the coop and hurry ahead to buy the tickets and beg the station agent to hold the train, if necessary, and then hurry back to help the two with the heavier burden. So the imitator and I piled our suit cases on the coop, picked it up, and took the lead.

The station agent told us that by going through an alley he pointed out we could shorten the distance. That short cut was our undoing. We had traveled all night without sleep in hot, dirty trains, and were a hard-looking crew. The imitator, being stout, had removed his collar for greater comfort, and my exertions had caused one end of mine to fly loose, so I tore it off, too.

So it is no great wonder that when the town marshal saw us emerge hastily from an alley at half-past four in the morning, carrying between us a coop from which came the squawks of badly jolted fowls, he felt suspicious. The first we knew of his suspicions was when, from the shadow of a tree, came the command:

"Halt! Hands up!"

It's a wonder the fall that coop got didn't kill everything in it.

As soon as we learned it was not a holdup I explained our situation, but the marshal was not to be explained to.

"Huh!" he sneered. "You look like Chautauqua lecturers, don't you? Not on your life! There's been too much of this chicken stealin' around here, and you two crooks come right along to the lockup."

The imitator was from Kentucky, and known as a high-tempered man, but he restrained his Kentuckiness with an effort.

"Hadn't you better prove we're crooks before you call us names?" he suggested. "Now, sir, we can show you creden——"

"Don't put that hand in your pocket or I'll blow your unprintable head off!" yelled the marshal. "None of them monkey-shines on me. And I'll call you what I blasphemous please, you anathema chicken thief."

The next instant that peaceful village and all its five hundred or more dogs were awakened by a shot, a yell, and a torrent of Kentucky's most exuberant profanity. But the shot did no damage, for the imitator, with quickness born of wild anger, knocked the marshal's gun hand up with his left arm as his right fist swung for the jaw.

The boys who had had the trunk came running up a minute later, and it took all three of us to pry the imitator off the marshal. But we waited long enough to let him do a good job of it before we interfered.

It happened that there was an intense

rivalry between Wharton, where this occurred, and Carverville, where the entertainers were going. It was for that reason the imitator had to pay a fine of $11 before he and Shippey could proceed to Carverville by motor-car. That same day the Wharton *Weekly Record* published an account of the incident which represented the "talent" as being a ruffianly crew. The names of the towns are probably fictitious. Mr. Shippey proceeds:

That evening a dozen motor-cars brought to Carverville a crowd from Wharton, including the editor of *The Record*, ostensibly to attend the Chautauqua, but really to discomfit the loyal Carvervillians by scattering copies of *The Record* through the crowd. That made the Carvervillians indignant, but the magician told them to keep serene and leave it to him.

The Whartonites took conspicuous seats in front. After a few preliminary tricks had got the crowd interested, the magician announced he would do something for the particular benefit of the ladies.

"I understand the drought has caused a shortage of flowers," he said, "and I want to show you how you may secure all the roses you want by simply rolling a newspaper up in a certain way. To aid in this trick, will some gentleman in the audience kindly lend me a newspaper?"

The Wharton editor was afraid some one would beat him to it. He fairly leapt forward to present a copy of the paper containing the obnoxious article, while all the Whartonites snickered. The magician thanked him and held it up before the crowd.

"You see, ladies and gentlemen," he said, "that this is an ordinary newspaper with nothing in it—with absolutely nothing in it. It is a copy of the Wharton *Record*."

I thought the cheering and jeering and derisive laughter with which the Carvervillians greeted this sally was going to outlast a Bryan demonstration at a Democratic convention, for the sudden discomfiture of the Whartonites was far funnier than the witticism. The editor was still standing before the crowd when the shot struck him, and his grin changed to the funniest expression of chagrin imaginable. When the crowd was quiet the magician continued, suavely:

"This would interest my friend the imitator, I am sure, for evidently it is merely an imitation of a newspaper."

Again the crowd cheered joyously, while the pink-faced Whartonites began looking at their watches.

The magician rolled the paper into a cone, laid it on his trick table, passed his wand over it, and then unrolled it, disclosing a dozen and a half exquisite roses.

"Now I am going to distribute these roses to ladies in the audience," he said, "so you may see they are genuine. Otherwise I fear you would think there is nothing to them, having seen them in the Wharton *Record*."

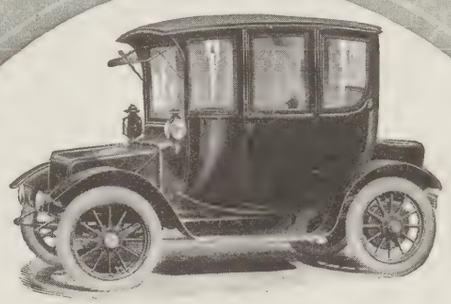
I never heard more enthusiastic applause than that which followed, while the red-faced Wharton delegation filed out, led by their editor. The magician made the hit of his career that night.

RAUCH & LANG

WORM DRIVE

Special Display Waldorf-Astoria Hotel Turkish Room Jan. 3-10

Exhibited also at Grand Central Palace Auto Show Jan. 3-10



The Car that Sets the Fashion

In the making of Society's vehicles—from the stately coach of 60 years ago to the finest Electric of today, Rauch & Lang productions have always set the fashion in each successive era.

Particularly is this true of this year's Rauch & Lang Electric, the first electric in America to embody the Straight Type, Top-Mounted Worm Drive. The superiority of the worm-drive method of propulsion is so pronounced as to win the immediate emulation of other makers.

No monarch's equipage was ever built with such painstaking skill, or with greater concern for the perfection of every detail. That is why the output of the Rauch & Lang Electric is always limited, and why it has always been Society's chosen car.

Any Rauch & Lang agent will gladly demonstrate.

"MATTY'S" RECORD FOR 1913

WHILE Gov. John K. Tener, of Pennsylvania, the newly elected president of the National Baseball League, did not boost his reputation for originality of thought when he said the other day that Christy Mathewson ought to be kept in the league long after his career as a pitcher is ended, his remark puts into words what many have been thinking, and shows that along with many other keen observers of baseball he realizes that the Giants' veteran twirler has a head that is worth as much as, if not more than, his arm. The new evidence is "Matty's" record for last season, which is summed up by Bozeman Bulger in the New York *Evening World:*

In 1913, Matty, the oldest pitcher, in point of service, in the National League, led them all, vets, phenoms, and youngsters included.

Despite his age, Matty pitched more innings than any pitcher in the game, with the exception of Adams, of Pittsburg, and Seaton, of the Phillies. They topped him by a narrow margin.

In forty games he allowed an average of 2.06 runs to the game—the best mark made by any of the twirlers.

Out of 1,195 batters that faced him, Matty did not hit one.

He gave twenty-one bases on balls, more than half of them purposely. Seaton, one of his strongest rivals, gave 136!

During the entire season Matty made but three wild pitches—another record.

Matty won 25 games and lost 11, and acted as relief pitcher four times.

And, mind you, he has been pitching regularly thirteen years!

If we recall that the average baseball life of a big league pitcher is seven years and that Mathewson has added six years to that life and still leads all the youngsters, regardless of age, race, or previous condition of servitude, the scribes can be forgiven for continually referring to him as "The Old Master." Veteran pitchers can usually get by with a record by using their knowledge of the game without having to rely on their physical endurance. But Matty took no such advantage. He pitched more actual innings than any man in the league excepting Seaton. In other words, did more physical work! He was the truck-horse of the Giants, and whether overloaded or not, always delivered the goods.

Look a little closer at the record and you will be confronted with the rather surprizing fact that more base hits were made off Mathewson than any man in the league. And right there is the beginning of the answer to his cunning. He lets them make hits, but when it comes to runs—nothing doing. That also explains why he is able to keep pitching.

As long as the bases are not occupied Matty considers himself but one-ninth of the team and allows the batter to hit the ball as hard as he will. It is when runs threaten that he tightens up. Now you may better understand the strange situation of a pitcher being hit harder than any other twirler in the business and at the same time allowing fewer runs.

When Matty is gone you will probably never again see such a seeming paradox in figures.

"Let me tell you something," Matty said to me one afternoon. "My future depends upon me, and no one else. If I tried to do eight-ninths of the work of a ball club I would, naturally, wear out quicker than the other ninth. On the other hand, if I content myself with being one-tenth of the team and let the fielders work some I will last as long, if not longer, than the other eight-ninths. Do you get that?"

I said I did, but I didn't. That kind of figuring is too much for an ordinary scribe. But he went right on.

"If, for instance, I carry this heavy grip in my left hand for ten years instead of my right," he asked, "which arm do you think would be the better off at the end of that time?"

That one was easy. And it was no joke with Matty, either. There is a new hat for anybody that catches Big Six carrying a heavy grip in his right hand.

This remarkable young man—a man at thirty-three is young, isn't he?—never overlooks one of those details. He always figures on the future, and the six extra years of service is the answer.

"Another thing," he explained once. "How much energy do you suppose is wasted by most pitchers in throwing balls that do not go over the plate? I couldn't exactly say myself," he said, without waiting for an answer, "but a whole lot. I discovered that secret the first year, and have worked for control ever since, not only to win, but to save my arm."

CARING FOR A GOLD-MEDAL BABY

EDWARD DEAN, fourteen months old, of Jersey City, may grow up without a mother's care, but it is just possible that the lack hasn't cost him anything. At any rate, the lack isn't noticeable at the present time, which sounds better, anyway. When a committee of experts in a baby contest examined hundreds of youngsters, many of whom were the children of comfortably well-to-do and highly respectable parents, they found Edward to be 100 per cent. sound. Of course, Edward may have been born perfect, but that would never have won him any honors, for he was anything but lusty when taken to the Jersey City Hospital last summer. The attention of a good nurse is responsible for his becoming a gold-medal winner. The story of his reclamation is told by a reporter for the Jersey City *Journal:*

Edward went to the hospital on July 31 last. The future gold-medal baby was ten months old at that time, and a pretty sick chap he was, too. He was suffering from bronchitis, and for a time after he was admitted to the institution the doctors feared that their little ward was going to develop pneumonia. Sometimes babies that drift into the City Hospital by the channels through which little Edward came do not last very long. Heredity and environment have deprived them of their fighting chance, and they just naturally

Barrett Specification Roofs

No Maintenance Cost

AN investigation into net roofing costs will promptly disclose the superiority of Barrett Specification Roofs. Their first cost is lower than that of any other permanent roof, and, as they require no painting or other care for upwards of twenty years, their maintenance cost is nil.

The Bush Terminal Company, with a total roof area of more than 70 acres (3,100,000 square feet) on their 181 buildings in Brooklyn, N. Y., illustrated below, studied the subject of roofing costs and adopted this type of roofs. The Vice-President of the Bush Terminal Company writes:

> We use this kind of roofing because our experience has shown it to be the best and cheapest. Our analysis of first cost of application and cost of maintenance entitles us to speak with some measure of authority.

The roofing contractor states that the expense for maintenance of this entire roof area has been less than $10 and estimates that if metal or ready-made roofings had been used, it would have been impossible to keep the buildings free from leaks, and that the painting bill alone up to date would probably have amounted to at least $50,000.

It is on such evidence as this that we base the statement that the maintenance cost of Barrett Specification Roofs is *nothing per year*—and the $10 exception "proves the rule."

A copy of The Barrett Specification free on request. Address our nearest office.

ATWOOD GRAPE FRUIT

No other Grape Fruit equals it in Flavor

"American Medicine" says:

"Realizing the great value of grape fruit, the medical profession have long advocated its daily use, but it has only been within the past few years that the extraordinary curative virtues of this 'king of fruits' have been appreciated. This dates from the introduction of the ATWOOD GRAPE FRUIT, a kind that so far surpasses the ordinary grape fruit that no comparison can be made."

E. E. Keeler, M.D., in the "Good Health Clinic," writes:

"In all cases where there is the 'uric acid diathesis' you will see an immediate improvement following the use of grape fruit."

A well-known physician writes:

"I prescribe grape fruit for all my patients, and tell them to be sure and get ATWOOD GRAPE FRUIT, as other grape fruit to the Atwood is *as cider apples to pippins.*"

If you desire, your grocer or fruit dealer will furnish the ATWOOD Brand in either bright or bronze. It may be procured at first-class hotels, restaurants and clubs. Ask for ATWOOD Brand. For home use buy it by the box; it will keep for weeks and improve.

ATWOOD Grape Fruit is always sold in the trade-mark wrapper of the Atwood Grape Fruit Company

THE ATWOOD GRAPE FRUIT CO., 80 Maiden Lane, New York

THE ATWOOD GRAPE FRUIT COMPANY. MANAVISTA, FLA. TRADE MARK.

slip across the Great Divide, where all babies are better babies forever and ever.

But fate was kind to this little boy. It was a particular mark of favor when it swept the little bundle of driftwood into the path of Miss E. M. Brede, the supervisor of the maternity and children's ward of the City Hospital. Miss Brede has ideas of her own about rearing a child in the way in which it should go; and having full charge of affairs infantile at the hospital, Miss Brede set to work to reclaim Edward. The work of reclamation was started under the guidance of Dr. Sol Davidson, house surgeon at the City Hospital. The original plan mapped out by Dr. Davidson and Miss Brede included as a working basis regular habits—that is, regular times of feeding, daily baths, absolute cleanliness, and plenty of sunshine and fresh air. That's the formula. It is simple enough, and its effectiveness is shown by the results achieved in a particularly difficult case.

When his good friends at the hospital first took him in hand Edward was as pale, morose, and fretful a little chap as one could run across in a day's journey. He used to lie in his little white crib in the children's ward, never smiling, pouting in fact, always on the verge of tears and always looking toward the door through which visitors entered the ward for a face and a form that never crossed the threshold of the room—a face and a figure that as the days went by gradually drifted from the baby memory and imagination.

Edward was given a new interest in life. He was provided with a very wide-eyed doll, a rubber elephant, and other gutta-percha forms delineating the animal kingdom, and after a time his paleness disappeared and as the color began to flush his cheeks the little edge of a smile blossomed from one or two very tiny dimples that grew deeper day by day.

Any boy will smile if he is fed properly. Any girl will too, for that matter, but a boy will smile deeper; and with little Edward it was a smile that would not come off. It had been put there to stay. During the month of August, a particularly trying month for grownups, let alone babies, Edward was fed on whole milk—ordinary cow's milk, not diluted. He was given seven ounces of milk every three hours. At 6 o'clock in the morning he was taken from his crib, had his first feeding at 6.30 o'clock, and a bath in tepid water at 9.30. Once a week he was given a hot bath. That was the first month; and during that time it must be borne in mind he was allowed to bathe his soul in all the sweet oblivion he could muster. When he was awake his friends saw to it that he was very much awake and when he was asleep he was allowed to be very much asleep. They say that health is a habit, that it is just as easy to acquire as any other habit and just as difficult to break. Children particularly are adepts at forming habits. It is an astonishing thing what an incredibly short time it takes for an eleven-month-old baby to form the health habit, and in the case of Edward Dean his doctors and nurses took care to see that the habit stuck.

At eleven months Edward was weaned. He was still fed on whole milk, but an addition was made to his diet. He was given broth once a day, a soft boiled egg

once a day, and milk every three hours. At eleven and a half months he was put on a general diet which comprized broths, milk, toast, cereals, and baked potatoes. Miss Brede says, and Dr. Davidson attests the fact, that no candy was administered to little Edward at this age. He was given nothing to eat between feeding times, with the exception of seven ounces of milk at 4 o'clock in the afternoon. His last feeding was at 7 o'clock at night, when he was given seven ounces of milk, and at 7.30 o'clock each evening he was safely tucked into his little white bed.

Ever since his stay at the hospital he has slept three hours in the open air on fair and stormy days, and in hot or freezing weather. When Edward was examined by the doctors in the *Journal* office the other day they called him the 100 per cent. baby; that is, he was absolutely perfect, according to the imposed tests, mentally and physically. Health is the most natural thing in the world, and nature needs every little Edward Dean to grow up and be a help to other men in the world. That's nature's plan, and Edward Dean is a natural baby.

THE SPICE OF LIFE

Strictly Business.—SPOKESMAN OF CREDITORS—"Vell, Cohen, we've decided to accept five cents on a tollar—cash."

COHEN, THE DEBTOR—"Cash, you say? Den, of course, I get der regular cash discount?"—*Puck.*

Slow Growth.—BAREFACED JUNIOR—"Yes, I'm trying to raise a mustache and I'm wondering what color it will be when it comes out."

MISS GREEN—"Gray, I should say, at the rate it appears to be growing."—*Yale Record.*

A Difference.—"That man who paid a fortune for a bogus rare book must be a very indignant bibliophile."

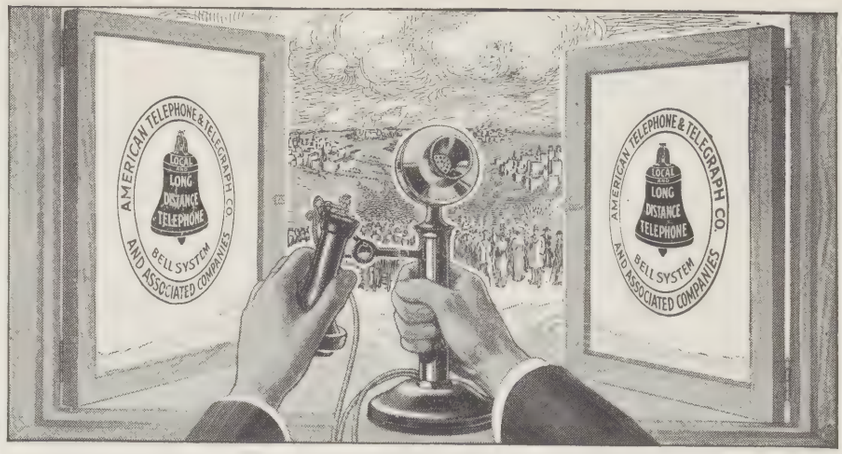
"Well," replied Miss Cayenne, "there are bibliophiles; and then there are what Josh Billings would have called 'bibliophools.'"—*Washington Star.*

Painful.—"You don't seem to be as fond of Charley Dawkins as you used to be."

"No, I admit that I don't care for him at all any more. Sometimes it seems as if I just couldn't wait until after Christmas to tell him so."—*Judge.*

Tricking Rhodes.—Cecil Rhodes used to take a coop of hens on board to provide fresh eggs on his numerous voyages between England and South Africa. But those were three weeks' journeys, and not a mere five-day crossing of the Atlantic. Hence another prominent South African personage was asked why he did not follow Rhodes's example and provide himself with the luxury of new-laid eggs at sea.

"Oh, I don't bother to take a coop of fowls on board," he replied. "But I tip the bos'un who looks after Rhodes's hens, and I get Rhodes's eggs."—*London Chronicle.*



The Telephone Doors of the Nation

WHEN you lift the Bell Telephone receiver from the hook, the doors of the nation open for you.

Wherever you may be, a multitude is within reach of your voice. As easily as you talk across the room, you can send your thoughts and words, through the open doors of Bell Service, into near-by and far-off states and communities.

At any hour of the day or night you can talk instantly, directly with whom you choose, one mile, or a hundred, or two thousand miles away.

This is possible because 7,500,000 telephones, in every part of our country, are connected and work together in the Bell System to promote the interests of the people within the community and beyond its limits.

It is the duty of the Bell System to make its service universal, giving to everyone the same privilege of talking anywhere at any time.

Because as the facilities for direct communication are extended, the people of our country are drawn closer together, and national welfare and contentment are promoted.

BUFFALO LITHIA SPRINGS WATER

The Great Solvent and Eliminator of Uric Acid and other Poisons

DR. STUART MCGUIRE, Richmond, Va., Surgeon in charge of St. Luke's Home, Professor of Principles of Surgery and of Clinical Surgery, University College of Medicine, Richmond, Va., etc.: "In cases of headache from lithæmia, of headache from passive congestion of the kidneys, of strangury from concentrated urine and a host of other ills, I always advise Buffalo Lithia Water."

GEORGE BEN JOHNSTON, M.D., LL.D., Richmond, Va., Ex-President Southern Surgical and Gynecological Association, Ex-President Virginia Medical Society and Professor of Gynecology and Abdominal Surgery, Medical College of Virginia: "If I were asked what mineral water has the widest range of usefulness, I would unhesitatingly answer Buffalo Lithia. In Uric Acid Diathesis, Gout, Rheumatism, Lithæmia and the like, its beneficial effects are prompt and lasting. * * * Almost any case of Pyelitis and Cystitis will be alleviated by it and many cured. I have had evidence of the undoubted Disintegrating, Solvent and Eliminating powers of this water in Renal Calculus, and have known its long-continued use to permanently break up the gravel-forming habit."

The late HUNTER MCGUIRE, M. D., LL.D., Ex-President American Medical Association and of Medical Society of Virginia, Late President and Professor of Clinical Surgery, University College of Medicine, Richmond, Va., etc., said of Buffalo Lithia Water: "I know from constant use of it personally and in practice that the results obtained from its use are far beyond those which would be warranted by the analysis given. I am of the opinion that it either contains some wonderful remedial agent as yet undiscovered by medical science or its elements are so delicately combined in Nature's laboratory that they defy the utmost skill of the chemist to solve the secret of their power."

Buffalo Lithia Water is sold by all druggists and everywhere mineral waters are sold.

BUFFALO LITHIA SPRINGS WATER CO. BUFFALO LITHIA SPRINGS, VIRGINIA

Grammar Note.—The perfect infinitive of the verb "to invest" is "to investigate."—*New Orleans Picayune.*

Cosmetic Item.—Personally we do not claim to be any great shakes of a detective, but when a woman is deep red on one cheek and light red on the other we know she isn't blushing.—*Dallas News.*

CURRENT EVENTS

Foreign

December 5.—Forty-six lives are lost when the Swedish steamship *Malmberget* founders off the Norwegian coast.

The Kaiser, as a result of a conference on the Alsatian crisis, orders the garrison at Zabern transferred.

December 7.—Mrs. Emmeline Pankhurst, leader of the British militant suffragettes, is released from jail after a hunger-and-thirst strike.

December 8.—Senator Gaston Doumergue succeeds in forming a French Ministry made up of Socialists, Radicals, and Radical Socialists.

December 9.—Provisional President Huerta's Mexican Congress votes to uphold him in declaring the recent Presidential election void, and to call another election for next June.

December 10.—The Nobel Peace Prize of $40,000 is awarded to United States Senator Elihu Root at Christiania.

Domestic

WASHINGTON

December 5.—The gunboat *Dolphin* is sent to Santo Domingo to aid United States Minister Sullivan in his efforts to assure a fair and peaceful election.

December 6.—Secretary of State Bryan, in an address before the National Conference on Popular Government, approves the demand of President Wilson for presidential primary legislation.

December 7.—Secretary Houston reports that the nation's combined cereal crop is one of the smallest in a decade, in spite of the largest wheat production on record.

December 8.—The Hensley resolution favoring Winston Churchill's proposal for a naval holiday passes the House by a vote of 317 to 11.

A delegation of 100 women from the National Suffrage Convention calls on President Wilson and asks that he send a message to Congress favoring the appointment of a standing committee in the House on woman suffrage. The President refuses and gives his reasons.

December 10.—Secretary of War Garrison, in his report to Congress, urges the necessity of a substantial army reserve. He says that under the present contract there were only eight men on the list at one time last summer.

GENERAL

December 5.—Colorado and Kansas road promoters plan a national highway to rival the proposed transcontinental Lincoln Highway.

Col. David DuBose Gaillard, engineer in charge of the Culebra Cut division of the Panama Canal, dies in Johns Hopkins Hospital, Baltimore. His arduous work in the tropics undermined his health.

It is reported that about 100 persons are dead as a result of floods in Texas.

December 6.—The California Progressives abandon their control of the Republican party machinery in that State and form a separate organization.

Miss Phœbe Couzins, America's first woman lawyer and Federal marshal, dies in poverty in St. Louis.

December 7.—Officials of the Teamsters' Union in Indianapolis announce that 2,000 strikers will return to work, and a Federal mediator who helped to settle the strike departs for Washington.

December 8.—San Francisco's opera war ends when Mayor Rolph yields to popular pressure for the acceptance of a municipal music-hall, for which $850,000 has been subscribed.

INVESTMENTS AND FINANCE

ARE STOCKHOLDERS TO HAVE MORE TO SAY?

SIGNS are cropping out every week that real influence has already been exerted on public sentiment, law-makers, and financial centers by the rapid increase in recent years in the number of investors in railway and other corporations. It has long been known that the corporations themselves—at least the larger and more successful ones—have favored this increase in the number of those who really own the equities in the properties. They have done so in spite of the additional trouble and expenses involved in mailing to these new stockholders, checks, notices, annual reports, etc. Their point of view has been that an increase in the number of stockholders means an increase in substantial citizens who will counteract the influence of Socialist agitators who are unfriendly to the properties.

It now seems not unlikely that this increase may result in something vital and beneficent in legislation affecting the rights of stockholders. Only a few weeks ago a resolution was introduced in a meeting of the Chamber of Commerce in New York, favoring the organization of stockholders in corporations as a large and active body, whose purpose should be to protect themselves against extravagant and otherwise bad management of their properties. This action has since been traced in some degree to the publication in *The Wall Street Journal* of a series of articles showing the imposing array of individuals now represented in the shareholders' list of American corporations.

Meanwhile, or more recently, the New York Stock Exchange has appointed a special committee to cooperate with Congress, the State legislature, or any other bodies that may seek to elevate the standard of corporation management. This committee is said to contemplate the starting of a movement for the passage of a law in this country resembling in many respects what is known as "the British Companies Act," by which it will become compulsory on the part of corporations to make public the terms under which their new stock and bond issues are floated. It is believed that this action, while for a long time in contemplation, was influenced, if not precipitated, by the recent exposure in St. Louis of the enormous profits secured by insiders in the 'Frisco system for themselves, their friends, or for a syndicate in which they were personally interested. Such a law ought, it is argued, to require that all bankers' commissions on sales of corporation stocks and bonds shall be made public, as they now are in England, and further that if any directors or other officers of a corporation receive commission or profits, directly or indirectly, connected with the business of their companies, public announcement of that fact will be imperatively insisted on.

It is interesting here, in connection with this whole matter, to give some of the statistics of stockholders as compiled by *The Wall Street Journal*. The work of compilation is still going on, but thus far it has been shown that 191 corporations in this country are owned in equity by 929,282 persons, their stock having a par value of $8,626,015,316. These corporations include 46 railroads and 145 industrial concerns. Few of these companies have a stock capitalization of less than $5,000,000. Of these companies, 126 have now been gathered into one table by the same paper and their share capitalization given with the number of shareholders on June 30, this year, and the number at the same time last year. Among the better known companies in this table are the following, with figures appended.

	Share, capital	*Stockholders*	
Company	*1913*	*1913*	*1912*
Adams Express	$2,000,000	3,029	2,993

ERIE'S BETTER DAYS

In the week ending December 6, the common stock of the Erie Railway showed a gain of nearly 10 points over the low record of last June. Attempts have been made to account for this rise in a stock which has never paid a dividend, and is not likely soon to do so. One report was a revival of the old rumor as to buying of the Erie road by a transcontinental line. This was promptly denied, and then it was said that the advance was due to buying by other people who believed the company had "turned the corner" and was now on the road to substantial prosperity. There is nothing new in this statement, inasmuch as Erie has long been known to be on the road to better days. A writer in the New York *Evening Post* undertakes to find the "real basis of the optimism that is being exprest to-day by Erie's friends." He says:

"It is necessary to get copies of the annual reports for the past five years, or since the company's directors adopted extensive improvement plans, and voted at the same time to use all surplus earnings over fixt charges in carrying out those plans. That was toward the close of 1908. The first year, as the annual reports show, the directors were able to make only a very small beginning. The next year, 1910, there was a slight increase in the cost of improvements charged to capital account, but a very large gain in the cost of work charged to surplus earnings.

"That was about the time Erie's operating staff began to see a little ahead and take heart. The next year there was another increase in the appropriations from surplus earnings, and then a few outsiders began to notice the changes. During the past two years the circle of Erie's admirers has greatly increased, and all because of the following expenditures for improvements and betterments:

	Capital acct. for road-bed	*Capital acct. for equipment*	*From income*
1913.....	$7,400,437	$5,007,762	$2,127,842
1912.....	2,153,299	5,759,583	1,806,267
1911.....	740,293	368,000	2,257,054
1910.....	998,823	217,370	2,155,968
1909.....	651,528	243,795	381,926

"Thus, inside of five years, Erie has spent $32,269,000 for improvements and betterments, $8,729,000 of which has been charged to surplus earnings. Just how that $32,269,000 has been spent is clearly shown in detail in the annual reports, the statements for 1913 being on pages 9 and 10.

"As for the results, they are found, first, in the increase of from 469 to 647 in the average number of tons of freight hauled by each train. That increase enabled the company to increase the number of tons of freight hauled one mile from 6,008 millions in 1909 to 7,730 millions in 1913, whereas the number of miles run by freight trains only increased from 12,744,015 to 12,859,124. That is a showing that any railroad should be proud of. That increase of from 6,008 millions to 7,730 millions was in revenue-producing freight; the gain of from 12,744,015 to only 12,859,124 was in money going out.

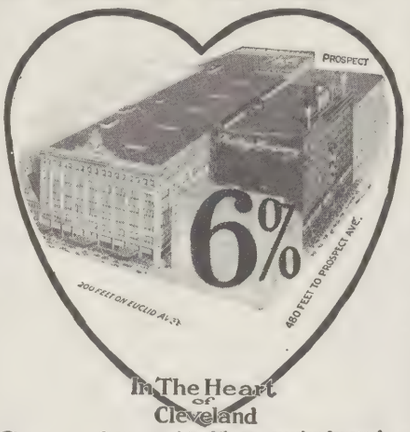
"In dollars and cents the results of the past five years' work are shown in the increase of from $49,784,236 to $62,647,359 in gross earnings. In 1908 Erie failed to earn its fixt charges by $1,623,000. For the twelve months ended June 30 last the surplus over fixt charges was equal to 4 per cent. in both classes of preferred stock and 4¼ per cent. on the $112,378,000 common."

WARNING

Fraudulent persons, representing themselves as agents of publishers of popular periodicals, are at work in various parts of the country. We urge our readers to pay no money for periodical subscriptions to strangers, even tho they show printed matter purporting to authorize them to represent publishers, especially when cut rates and bonuses are offered. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect your community is being swindled, notify the Chief of Police and the publishers, and arrange another interview at which the proper action can be taken.

FUNK & WAGNALLS COMPANY
354–360 Fourth Avenue
New York City

A SAFE INVESTMENT—PURCHASED BY BANKS



In The Heart of Cleveland

Security consists of the new, massive, fire-proof, six story and basement, granite and terra cotta business building, fronting about 200 feet on Euclid Ave., extending 480 feet through to Prospect Ave., and fronting 218 feet on Prospect Ave.

In the Heart of Cleveland's Finest Retail District

together with valuable, long term leasehold estates. We estimate a conservative value of security at DOUBLE the amount of mortgage, over and above the financial responsibility of the May Department Stores Company—the lessee.

First Mortgage GOLD BONDS 6%

secured by the new mammoth

May Department Store Building

with valuable long term leasehold estates and guaranteed income

We offer at par and accrued interest the unsold portion of $2,000,000 (total issue)

Denominations $500 and $1000 each
(maturing 2 to 20 yrs. Int. payable Mar. 1 and Sept. 1.)

A Safe Investment

This new City Center structure is leased to the May Department Stores Company with assets of $27,000,000, for thirty years, at an annual rental sufficient to pay absolutely all expenses, fixed charges, including interest and principal of bonds as they mature. This lease is assigned and rent paid monthly to Trustee for bondholders, as additional guarantee for prompt payment. The net earnings of the company for the year ending January 1913, were *fifteen times* the amount necessary to meet the requirements of the lease. The serial payment of principal annually increases the margin of security. Ample protection against fire by first class insurance companies, and Mortgage Guarantee Policy, for protection of bondholders.

We Recommend These Bonds and Advise Immediate Purchase

Velvet

THE SMOOTHEST TOBACCO

You'll find Velvet tobacco a real wonder smoke.

It's Kentucky's choicest old Burley—only the tender middle leaves. They have been hung in the warehouse for 2 years—maturing, mellowing—until they have lost all leaf harshness, developed a fine, good flavor, and attained the remarkable smoothness which is such a distinct feature of "Velvet" tobacco.

Such high-quality tobacco, such a careful process, such perfect results, are rare in these days of "quick returns." Get a tin of Velvet at your dealer's. It will delight your tobacco sense!

Liggett & Myers Tobacco Co.

Full 2-oz. tin, 10c
Handy 1-oz. bag, 5c
1 lb. humidor jar

California AND Glacier National Park

After visiting points of interest along the Pacific Coast and in California, journey east via the Great Northern Railway—stop off at Glacier National Park—Uncle Sam's newest and only national playground on the main line of a transcontinental railway.

Over 1500 square miles of mountain scenery, unsurpassed for beauty and grandeur on this continent, awaits the tourist—the explorer—the fisherman—the artist—the scientist—the mountain climber, to whom it offers abundant opportunities to penetrate into the more remote regions which as yet have not been visited by tourists.

The crisp, invigorating mountain air will recuperate your energies and provide you with a store of pleasant memories.

Vacations $1 to $5 Per Day

Tours by automobile, horse-stage, launches on the lakes, saddle and pack horses, or afoot if "hiking" appeals to you can be made at a cost of from $1 to $5 per day. There are no fixed definite tours which must be conformed to—you can make a complete horseback, "hiking" or camping tour of the Park, independent of hotels or camps, if you desire.

Every modern convenience is offered—magnificent new $200,000.00 hotel at eastern gateway to the Park—Belton Chalets at western entrance and chain of Swiss Chalet Camps throughout the Park.

ATTRACTIVE TRIPS TO FAMOUS RESORTS

(*Continued from page* 1249)

on either line between San Francisco and Yokohama or Hongkong, allowing stop-overs at Honolulu.

The Canadian Pacific also offers several round-the-world tours, some of them all the way by steamers and others by way of the Trans-Siberian Railroad. Other tours embrace Japan, China, the Philippines, Australia, New Zealand, the Fiji Islands, and Hawaii.

The Pacific Mail Steamship Company carries its passengers to many of the less known parts of the world, countries which are filled with interest for the tourist. Its ships sail to Honolulu, with its wonderful climate and remarkable people; to Japan, the "Land of the Cherry Blossom"; to China, where Western eyes pop with wonder all the time; and to the Philippines, where the American citizen may see what his Government has been doing in the past fifteen years.

Cruises on the Pacific Ocean are also numerous. After reaching San Francisco by any of the transcontinental railroad lines, one may take the steamers of the Oceanic Steamship Company to Honolulu, Samoa, or Australia; the Matson Navigation Company to Hawaii; the Union Steamship Company to New Zealand and Australia; the American-Australian Steamship Company to the Philippines and Orient, and reach Japan also by any one of the Japanese lines, the Toyo Kisen Kaisha, Nippon Yusen Kaisha, or Osaka Shosen Kaisha. The Great Northern steamer sailing from Seattle also reaches Japan, China, and Manila.

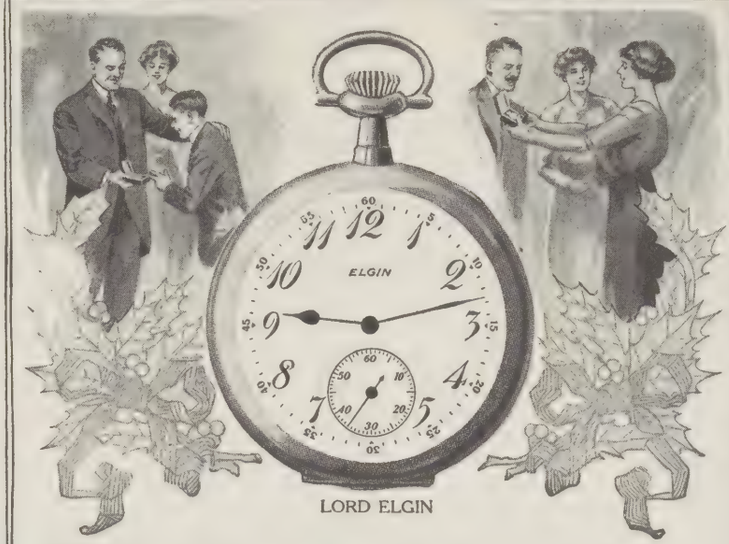
Trips up and down the Pacific coast are offered by the Alaska-Pacific Steamship Company, the Pacific Coast Steamship Company, the Pacific Navigation Company, and the San Francisco and Portland Steamship Company. These steamers make ports all along the coast from Los Angeles, on the south, to Portland, Tacoma, and Seattle, on the north.

The Atlantic Steamship Lines of the Southern Pacific Company offer some delightful vacation cruises along the South Atlantic coast and through the Gulf of Mexico. Tourists see the extreme south of the United States, passing along the Florida coast and into the Gulf and stopping at historic old New Orleans. The company has a fleet especially adapted for service in the Southern seas. This cruise of five days the company calls "One Hundred Golden Hours at Sea," and those who have taken it realize that the title tells no more than the truth.

Stop-over privileges are allowed at New Orleans, and from that point trips may be taken to Cuba, Texas, or Mexico to the Canal and to Central and South American points.

TOURS ACROSS THE CONTINENT

But the steamers of the Southern Pacific Company are not the only means provided by the company for pleasurable winter travel. From New Orleans the Sunset Limited carries the tourist through Louisiana, Texas, New Mexico, and Arizona into California, where one may visit the famous resorts of the Pacific coast. The Southern Pacific, Union Pacific, the Santa Fé, the Chicago, Rock Island & Pacific, the Burlington, the Great Northern, the Northern Pacific, Denver,



LORD ELGIN

THE time for Christmas gift selection is here again. Therefore it is timely to impress upon you the value and satisfaction of LORD ELGIN as a gift to men and youths and of LADY ELGIN as a gift to the gentler sex. They are life-gifts. Both of these beautiful Elgin models are remarkable for their evidence of fine workmanship, delicate adjustment and constant precision. LORD ELGIN is extremely thin and LADY ELGIN is extremely small and dainty. In every respect they are worthy to bear the time-honored Elgin name.

The Elgin Watch

The 40,000 leading jewelers of America—Elgineers, masters of watchcraft—join with us in commending LORD ELGIN and LADY ELGIN for gifts. These jewelers are of ripe experience and highest reputation. Visit your local Elgineer and have the benefit of his expert advice in selecting the movement and case best suited to your requirement.

Rio Grande - Western Pacific, and the Chicago, Milwaukee & St. Paul all compete for a share of the immense amount of passenger traffic that flows across the continent in the winter and spring.

Florida passengers from the West can take direct trains from Chicago via Cincinnati, Chattanooga, and Atlanta, to Jacksonville.

No land can be more beautiful in winter than Southern California, with its wealth of color, its gorgeous scenery, its old missions, its wonderful roads and tours for automobiles, and its climate of perpetual summer. Los Angeles, Riverside, Coronado, San Diego, Monterey, Santa Barbara, Pasadena, Santa Monica, and other resorts are veritable havens for those who wish to escape the rigors of an Eastern winter. And the Easterner is able to appreciate what he is escaping all the better because he can look from his land of sunshine to the east and see the snow on the slopes of the Sierras, only a few miles away. In fact, if he so desires, he can reach the snows in an automobile after a comparatively short run over some of the best roads in the country.

The Santa Fé road carries one over the route of the old Santa Fé trail, through New Mexico and Arizona. The road cuts through the Great American Desert, and one gets glimpses of the Pueblo and Zuni Indians with their queer towns and strange occupations. A wonderful sight along the Santa Fé is the Grand Cañon of Arizona, one of the most stupendous works of nature. This is one of the scenic marvels of the world and one that every American should see.

From these Southern routes the tourist may make side trips into Arkansas with its famous Hot Springs, over the Missouri Pacific; over the Missouri, Kansas & Texas into Texas, the giant of all the States, with its great central farming belt, its cotton country to the south, and its marvelous climate along the Gulf Coast.

The Burlington route runs farther to the north, reaching the coast by the way of Denver and giving tourists a chance to visit that beautiful Colorado city as well as to see the magnificent scenery of the Rockies with snow-capped Pike's Peak towering above them. From Denver on, one route is via Denver, Rio Grande-Western Pacific, through Salt Lake City with its great Mormon Temple and Tabernacle, by Feather River cañon, or out through the mountains of Nevada, and down the western slopes into the Golden State.

The Rock Island runs south by El Paso to the Coast, and far to the north are the St. Paul, the Northern Pacific, and the Great Northern, reaching the Puget Sound country, the starting-point for Alaska, and the great fruit and grain belts of Oregon and eastern Washington. By these northern routes one may get a glimpse of the Yellowstone National Park, the land of the geysers, a marvel of nature almost equal to the Grand Cañon.

TRIPS TO THE SOUTHLAND

For those who prefer the land south of Mason and Dixon line as a winter resort, there are many ways of transportation, both by water and rail. All through Virginia, the Carolinas, Georgia, Florida, and along the Gulf States there are hundreds of places where the tourist from the North may spend delightful days or weeks and find enough at all times to keep him amused and interested. The outdoor life of the South and the wonderful health-giving air of the great pine belts are among the greatest charms of that section. For the hunter no better locality could be found, as game of all kinds abound, and there is a bewildering variety of game fish in the waters. For the golf-player the South is a paradise, for excellent golf courses are dotted all over the country, and one may play on a score of different links during a short visit.

Among those courses which are the most favored by winter golf enthusiasts are Virginia Hot Springs; White Sulphur Spring, W. Va.; Pinehurst, Southern Pines, and Asheville, all in North Carolina. Excellent shooting is also found in these and other localities of the southern region.

Following the Alleghanies southward from those notable resorts reached by the Chesapeake & Ohio, or Norfolk & Western, and Baltimore & Ohio Systems, we come to that famed region of Western North Carolina popularly termed "The Land of the Sky." This country with its beautiful mountains and lakes is so favorably situated from the Middle South that the winter vacationists find its climate tempered and conducive to all forms of outdoor recreation.

The life of this region centers around Asheville, whose hotel accommodations are so complete that it is not only famed as an all-winter resort, but as a stopping-off place for tourists going to and coming from far southern points. All resorts in this region, including Hendersonville, Try-

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"T. C.," Bridgeport, Conn.—"Some persons claim that the letters 'O K' should each be followed by a period, others that the letters are a complete expression. Which is correct?"

The NEW STANDARD DICTIONARY lists the term "O. K." in its alphabetical place, printing the term with capitals and periods, whether used as an adjective or as a verb. The term is characterized as a United States provincialism, and so not standard English.

"B. M. B.," Canadian, Texas.—"How does the NEW STANDARD DICTIONARY define the word *electrone* or *electron?* Is it spirit or matter, or is it both?"

The NEW STANDARD DICTIONARY defines an *electron* as "the smallest known component of matter; always associated with an unvarying unit charge of negative electricity."

"E. V. C.," Philadelphia, Pa.—"Kindly state whether 'do' or 'does' is correct in the following sentence, and the full reason. 'I have to suggest that Mr. Jones do (does) not discontinue his solicitation of this account.' We realize that the diction is faulty and that it could have been put in simpler form, but that is not the point at issue."

The use of "do" is correct, because it is that form of verb which represents the being, *action*, or passion, as conditional, *doubtful*, and contingent. The fact that "suggestion" enters into the sentence introduces therein an element of doubt. There is ample authority for it. See the Book of Revelation, ch. xix, verse 10: "See thou *do* it not."

"H. M. C.," Emporia, Kan.—"Will you kindly tell me if the word 'tho' is properly used in the sentence, 'It looks as *tho* the freshman class will be the largest the College has ever had'? It seems to me that 'if' would be the proper word to use in this sense."

"As tho" and "as if" are synonymous expressions, and either is permissible in the sentence you submit, but in our judgment "as if" is preferable and more euphonious.

"S. H. C.," Chicago, Ill.—"The 1910 revision of the Bible, Mark 4, 21, inserts a comma after 'bushel' in the following: 'Is a candle brought to be put under a bushel, or under a bed?' It is clear that 'bushel' and 'bed' are equivalents and not alternatives. Is, therefore, the comma not misleading?"

It depends entirely upon the point of view of the original writer and the translators. We judge that the reference is to an alternative rather than to an equivalent. The use of the comma in either case does not, in our judgment, alter the sense. It is grammatical punctuation rather than rhetorical. Perhaps reference to the Revision Committee will elucidate the point.

"T. B. C.," Bath Beach, N. Y.—"Please inform me which of the following sentences is correct: 'None of these payments *applies* against the building account,' or 'None of these payments *apply* against the building account.' The question is whether 'apply' or 'applies' should be used."

It all depends upon your point of view when using "none." Both sentences may be correct, for "none" is construed in the singular or plural as the sense, or the best expression of the meaning, may require.

"R. F.," Washington, D. C.—"Is the following sentence grammatically correct? 'I have seen it in the X.Y.Z. Magazine, when it was published there this year.'"

The sentence you cite is incorrect. You may say with propriety, "I have seen it in the X.Y.Z. Magazine. It was published there (meaning therein) this year," or "I saw it in the X.Y.Z. Magazine, where it was published this year."

"J. B.," Osceola, Neb.—"Is the sentence, 'Let it *lie* there,' correct?"

Everything depends upon what "it" stands for. If a hen, then possibly "Let it *lay* there" is right; if a parcel, then "Let it *lie* there" is correct.

Spend Your Winter Vacation

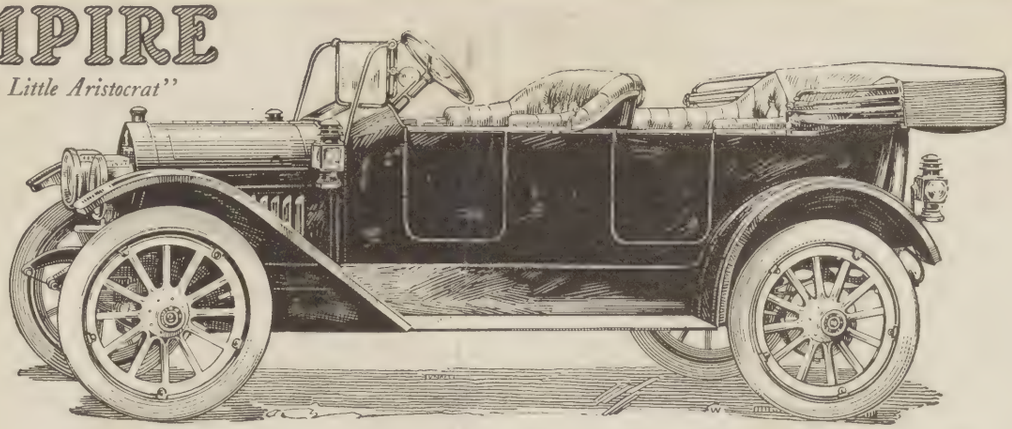
"The Little Aristocrat"



Now $900

Completely Equipped

New Series Model 31, Five-Passenger Touring Car

Here in the 1914 EMPIRE is offered an automobile value that is really exceptional—a value that experienced car owners will be quick to see—one that by actual comparison will make an instant appeal to those about to buy their first car—a value that has won the acclaim of dealers everywhere.

See it—"The Little Aristocrat" of motordom. A full-fledged 5-passenger touring car. A light-weight car with a surplus of strength and service that endures—a surplus that always means utmost safety.

But judge the EMPIRE by even more than the merely visible attributes of beauty, distinction and serviceability.

Judge it by what it has done as an actual touring car under road conditions that few other cars have ever attempted.

Five-Passenger, 110-Inch Wheel Base, Completely Equipped—$900, Including

Demountable Rims	Rain Vision Windshield	Stewart Speedometer	Eisemann Magneto	Turkish Cushions
Mohair Top	Tool and Tire Kits	Prest-O-Lite Tank	Side and Tail Lamps	Oil Sight Feed
Top Envelope	Extra Rim	Gas Head Lights	Double Tire Irons	Dash Air Adjustment

The Empire Idea

The first EMPIRE Car was built five years ago for one of the wealthiest men in Indianapolis. He wanted a compact car of big efficiency. A car that would "stand up" under heaviest touring conditions. A car that would be associated with low-priced cars only in point of *price and minimum upkeep.*

Now the yearly output is many thousands. This year's model is enlarged, improved, and more refined than ever. But the basic principles that make for EMPIRE service remain unchanged.

The EMPIRE is distinctly a "one-policy" car. Every effort is concentrated in the making of this one model alone. The chassis is standard. That's why we can make it so well.

And the men behind it are all successful business men of large affairs. Every one of their enterprises is a permanent success.

What It Has Done

The EMPIRE is the car that traveled 3,766 speedometer miles across the continent with the "big fellows" in the Indiana-Pacific tour. Because of its light weight, surplus strength and power, it negotiated hundreds of miles of rough roads that no other tour ever attempted. The first and only car of its class to accomplish the feat. It was the sensation of the run.

Send for the Story

Write for the story of this great achievement. It comes to you free in the 9x12 book shown at the right. Profusely illustrated. This book is the last word in transcontinental travel. It will appeal to every car owner interested in American touring.

With it you will learn of the many unusual features that make the EMPIRE a car of exceptional value—a real touring car without excessive weight or heavy cost of maintenance.

Dealers

We regret that even our quadrupled output will not go all the way around. We want only the most successful and efficient automobile merchants to handle the EMPIRE—and those only who will render service in keeping with EMPIRE policy.

We want to hear from progressive Motor Car Sellers in the small towns as well as in big centers in open territory.

Our big national advertising campaign will continue to tell the story of EMPIRE efficiency everywhere. This is the car that will help you take care of the inquiries you receive for a light-weight, roomy car at this low, new price of $900.

Many Men —One Mind

However much car buyers at the New York Automobile Show may differ as to the merits of their favorite cars, we are safe in predicting a general demand for Firestone Tires.

The motoring demands of these "Many Men" will be as diverse as the wide territory they represent, but extremes of heat and cold; mountains and mud; boulevard and trail—all are alike overcome by the in-bred Firestone Quality. Besides, there is the incontestable advantage in 14 years of supremacy capped by the super-service of 1913.

Therefore—no matter what car is selected; no matter what their travel-demands, these men will be of "one-mind" to specify Firestone Tires—and their—Most Miles Per Dollar.

STAMMERING

Permanently CORRECTED

Don't let this humiliating habit grow on you. The Reed method corrects it in a few weeks. It is the most thorough, scientific, and uniformly successful method ever devised for natural speech. To prove it we give A WEEK'S TRIAL FREE. Endorsed by highest authorities and all former pupils. Reed method used in public schools. Teachers can greatly increase their incomes by taking special teachers' course. Write today for catalogue.
THE REED SCHOOL, 367 Hubbard Avenue, Detroit, Mich.

The Winter Term

Do you know that many of the best private schools will be open to receive your children after the Holidays?

Schools which had a full roster in September frequently have a few vacancies at this time, due to change in parents' plans, illness, and other causes.

If you were unable, for similar reasons, to place your son or daughter in a school at the Fall opening, take advantage of this opportunity. Place them in the right school after the Holidays. Many schools devote special attention to students who enter at this time, helping them to rapidly make up the three months which they have lost. Principals also arrange special prices for the rest of the year.

In these columns appear the announcements of the leading schools and we would suggest that you write at once to those which seem to meet your requirements.

If you do not see the one you are seeking among the schools advertised here, we will be glad to advise you promptly and fully. This service is impartial and is offered without charge.

Simply tell us the kind of school desired, location, and approximate tuition, addressing your letter to

"Here are the General Offices and Works of The Electric Storage Battery Co.—the largest storage battery plant in the country."

POWER

FOR STARTING AUTOMOBILE ENGINES AND ELECTRIC LIGHTING

To start an automobile engine requires power—lots of it—especially in cold weather.

The real reason why electric starting and lighting apparatus has been so wonderfully reliable and is being almost universally adopted is because the storage battery has proved itself to be the most useful and efficient reservoir of energy for this purpose.

To crank an engine, a storage battery must develop from one-half to one horse power for a few seconds or minutes.

To light the lamps, it must develop about one-fifteenth horse-power for 8 to 15 hours without recharging.

It must receive and utilize the energy delivered it by the generator without waste. It must do its work, month in and month out, at temperatures ranging from below zero to 100° F.—instantly, automatically and cheerfully. It must demand (because it will receive) less care and attention than engine, gear box or any other vital part of the car.

THE "Exide" STARTING & LIGHTING BATTERY

has been designed and constructed with a thorough knowledge of the varied character of the work it must do. It is made by a company that has had 25 years of experience in storage battery manufacture, covering every field in which storage batteries are used.

This company manufactures and has manufactured more storage batteries than all other makers put together. Two out of every three automobiles using electric self-starting and lighting apparatus are equipped with an "Exide" Battery. There are over 100,000 "Exide" Batteries now in service used for starting, lighting or ignition.

For electric vehicle propulsion "Exide" Batteries have for years been the standard among nearly all electric vehicle manufacturers and are to-day used by the largest electric vehicle owners. The large electric lighting companies use "Exide" Batteries as reservoirs of current for use in emergencies. They are used by the U. S. Government in 20 submarines, for firing large guns, for light-ships, for electric vehicles and for wireless apparatus. In New York City 182 storage battery street cars are propelled by "Exide" Batteries.

Unless you are a trained engineer, you cannot safely judge of the quality of a storage battery. Your best protection is to select a battery that is manufactured by a company having the necessary experience and facilities and a battery that has been approved by large battery users—those who are experts.

Your car is or will no doubt be equipped for electric self-starting and lighting.

Remember, the Storage Battery is the "Heart" of the System.

You can be absolutely assured of dependable every-day service by using the "Exide" Battery. Insist upon the "Exide". Your dealer can secure it if *you* insist.

TOPICS OF THE DAY

WHY DOES BUSINESS HALT?

PERHAPS American business has grown so used to its shackles that it trembles with apprehension as they are struck from it. At least it is evident that President Wilson's efforts to inaugurate the "new freedom" in the business world are not at the moment showing fruit in the form of increased industrial and commercial activity. On the contrary, so Republican leaders assure us, depression and dismay are the dominant emotions among business men in many sections of the country, and smokeless chimneys, dinnerless pails, and crowded soup-houses loom large in the immediate outlook. "The country is already in the midst of a financial and industrial panic, and all over the country men to-day, both in factories and financial institutions, are nearly scared to death," affirms Representative Mann, Republican leader of the House. "The lever of prosperity has been reversed," declares Joseph G. Cannon, and Reed Smoot assures the Republican National Committee, concerned over a platform for the next campaign, that "silent wheels, smokeless stacks, and suffering people will speak louder than any declaration of principles that we can make." Nor is it only to Republican eyes that the gloom overhanging the business world is visible. Thus ex-Congressman Martin W. Littleton (Dem.) reports that "New York is at this moment the center of the most remarkable pessimism I have ever known."

Turning from the testimony of politicians to that of business men, we find Charles M. Schwab, President of the Bethlehem Steel Company, declaring that "this country faces the most serious depression it has ever known," while another iron-master, Andrew Carnegie, is no less emphatic in his assertion that business conditions are "splendid" and "this talk of panic is tommyrot." But however well founded Mr. Carnegie's optimism may be, those who do not share it find food for their gloom in the news columns of the press from day to day. Thus in the *Wall Street Journal's* survey of last week's business horizon we read:

"One striking sign of the times, repeating a warning given only a little less emphatically in past weeks, is the heavy decline in bank clearings at all important centers, and particularly at New York. Speculative requirements at this center are unusually small, and the only inference is a drastic contraction in trade, which the activities of the Christmas season entirely fail to disguise.

"If this is true of bank clearings, it is equally true of railroad earnings. The figures for October ran something like 14 per cent. behind the gross of the previous year, and the net showings were even worse. The weekly gross earnings since that time have been falling off in an increasing ratio, with a few exceptions, of which the Pennsylvania system east of Pittsburg is a creditable example.

"It is true that in the latter half of the current year the railroads have been putting all they could get together into maintenance. But it must not be forgotten that a higher standard of maintenance is now demanded, if only by the conversion of wooden or steel-frame cars into all-steel cars. This means heavier trains, new rails, stronger culverts, and a more liberal use of rock ballast; while the increased earning capacity cannot be proportionate, and will only show itself over a long period of time. . . . . .

"Trade reports are not encouraging, and so far from showing any improvement, further contraction is indicated, especially in the basic industries of the country. It is true that there is less labor disturbance than there has been for a long time past, but this is due not to contentment and prosperity, but to increasing competition in the labor market. . . . . .

"Reports from the steel trade are depressing. Production is generally 50 per cent. below capacity, and at the present rate it is doubtful if the Steel Corporation is earning more than fixt charges. It should not be forgotten that wage advances have added a dollar a ton to the cost of production, and the fact affords further food for thought along the lines already indicated."

Nor do these cheerless paragraphs complete the story. The last bulletin of the American Railway Association reports that between November 15 and December 1 the number of idle freight-cars increased from 22,652 to 57,234. A Chicago dispatch tells us that "thirty-two employers of labor in the South Chicago district—the city's largest employment center—have discharged, within three weeks, 5,498 men, while a much larger number of employees have been placed on half time or less." Representative Humphrey (Rep.), of Washington, announces that in his State 227 shingle- and lumber-mills have closed their doors, throwing some 15,000 men out of work. "This is not a complete list," he says, "and it is increasing each day." One expert, quoted by the New York *Journal of Commerce*, estimates that "the present wage payments of employees throughout the nation are about $1,250,000 a day below the normal, which would mean a falling off of wages for the year of more than $400,000,000."

A survey by the New York *Herald* of business conditions in the country at large reveals the fact that the present depression is most noticeable in the East in New York, New Jersey, Pennsylvania, and Delaware, and in the Middle West in Ohio,

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

PROPHETS OF EVIL.
—Macauley in the New York *World*.

convinces *The Herald* that the danger-point in the whole situation lies in the starved financial condition of the railroads—a condition which will disappear, we are told, if the Interstate Commerce Commission permits a slight increase in freight-rates.

In the main, then, the witnesses seem to agree that business in many of the principal financial and industrial centers is in a hesitant and halting mood. But when it comes to explaining this fact, agreement vanishes, some tracing the trouble to the new tariff, some dividing the blame among the tariff, currency legislation, and the pending antitrust program; some seeing in the situation nothing but a safe and wholesome slowing down on the part of business while it adjusts itself to changing conditions. Still others find explanation enough in the universal shortage of capital which is being felt in all the money markets of the world. But the most dramatic theory is that advanced by Senator Simmons, who as Chairman of the Finance Committee steered the Tariff Bill through the Senate. According to this authority the present panicky conditions have been deliberately brought about by "the efforts of a little coterie of moneyed men who control big finances in this country," their purpose being to discredit the Administration's tariff and currency legislation. In the course of an interview with the New York *World's* Washington correspondent, the Senator from North Carolina says:

"Certain men who control hundreds of millions of dollars have been trying to bring about conditions that would frighten the President and Congress; but the Democratic platform pledges as to the tariff have been carried out, and those on currency and monopolies will be carried out.

"You can not put your hand on the men who are calling in their money or dropping off their laborers, but you can see signs of their efforts. The 'nigger' is coming out of the wood-pile.

"A big concern like J. P. Morgan & Co., of New York, dominates would not mind losing $40,000,000 or $50,000,000 in a financial crash if it could block certain legislation.

"The truth is, these great rich men of affairs have had control so long that they can not now realize that they must call at the White House and at the Capitol as other people do. They still believe they will dominate."

The same idea is suggested by the Secretary of the Navy, Josephus Daniels, who, speaking at a dinner of the North Carolina Society in New York last week, said:

"Those who wish to show their loyalty to the doctrine 'great is Diana of the Ephesians' have gone to the extreme of, if not trying to bring on a panic, at least hamstringing and halting business in the hope of compelling acceptance of the idea of a centralized bank. This unpatriotic hysteria has gone so far as to predict that the legislation which takes the finances of the Republic out of the hands of a few great financial institutions and vests control in the Government may drive gold out of America."

Among those who hold the tariff responsible is Charles M. Schwab, who is quoted in a Pittsburg dispatch to the New York *Times* as saying:

"Under the new tariff cost of transportation of steel, for instance, is affected in this manner—that the rate between Bethlehem, Pa., and New York is as great as that between Rotterdam and New York.

"It was true, when Andrew Carnegie said it, that the cost of steel production in this country was so much cheaper here that we could compete with the world and win, but conditions have changed. Patents which were held in this country have run out and are in operation abroad. Methods of production have so advanced in other countries that the cost of making steel has become just about standardized all over the world. And with cheaper transportation under the new tariff other countries can more than successfully compete with us in many lines.

"It is proposed to reduce the cost of living. But what is the use of reducing the cost of living when a laboring man has no job and can earn no money with which to buy the necessities?"

But as Secretary Redfield points out, "the flooding of our markets with the alleged cheap wares of Europe has not happened." As a matter of fact, imports for October, the first month under the new law, were far less in quantity than for the same month of last year, while exports for the same period showed a great increase. And in the New York *Sun* we read:

"Men interviewed by *Sun* correspondents in industrial centers, where unfavorable conditions are admitted, say they are not

Copyrighted by the North American Co.

TOO BUSY TO SCARE.
—Richards in the Philadelphia *North American*.

satisfied as yet that the new tariff regulations are altogether responsible for a slump in business. They declare that the law has not been in force sufficiently long for them to reach exact conclusions."

Giving ear to those who would tell us of the sun shining behind the clouds, we are assured by the Philadelphia *Record*

that "it is a great mistake to suppose that the business of the country is in a bad way"; we learn from *Dun's Review* that "sentiment in financial circles has improved noticeably of late"; and in the Springfield *Republican* we find the assertion that "conditions are not nearly as bad as many men profess to believe, nor is the future so dubious-looking." In the Pittsburg correspondence of the New York *Evening Post* we read of the future:

"It is hard to avoid the conclusion that the time cannot be far distant when the reduced prices of goods, combined with the lowness of stocks of merchandise on hand, a result of an actual consumptive demand which prevents accumulations, will start a fresh buying movement. That time has certainly not yet been reached, but in view of low stocks of merchandise in practically all lines, and in the light of experience during the past fifteen years, covering the period of the great consolidations, business is likely to respond very suddenly when recovery sets in."

Another item of cheer is the fact that the Christmas-season money-orders issued by the New York Post-office this month, for transmission to foreign countries, amounted to $7,775,000, or $1,250,000 more than for the corresponding period last year. "This does not look as if the pinch of hard times was quite so desperate as some people appear to imagine," remarks *The Evening Post*, for "when people are out of employment or find exceptional difficulty in making ends meet, they do not open their purse-strings wider than usual for the purpose of sending money to their relatives across the ocean." And in the House last week Speaker Clark denounced a number of Republican leaders, including Senator Root, Representative Mann, and Chairman Hilles of the Republican National Committee, as "the greatest calamity-howlers in America," and described their apparent efforts to frighten the country into a panic as "a monstrous and unpardonable performance."

THE PERILS OF INFLATION

THE WARNING CRY of "inflation" has been heard from time to time ever since the Administration's Currency Bill became a matter of public discussion. But the sponsors of the bill paid comparatively little heed to it until it was voiced by Mr. Elihu Root during the last days of senatorial consideration of the measure. Mr. Root's discouragement which he said he felt at making an elaborate argument in opposition at a time when "the fate of the bill and of every part of the bill" was "already determined," may have been followed by more pleasing emotions at the sight of the Democratic caucus making eleventh-hour changes in the measure to meet some of his objections. Further, the reception given his concededly brilliant speech by political friends and foes, and the little flurry over his availability as Republican presidential timber, may have helped to remove the impression that his labors were all in vain. One of Mr. Root's great statesmanlike qualities, according to so good an authority as ex-President Taft, is his ability "to work out in his own mind the ultimate results of a course of action." The Senator from New York has it all worked out in his own mind that the ultimate result of Democratic action on the currency question will be the triumph of the foes of "sound money," a national currency insufficiently secured, and an era of inflation to be followed by disaster. So, upon the presentation of these prophecies of evil in his Senate speech of December 13, there arose a chorus of applause and vigorous expressions of agreement from Republicans and conservatives. But Democrats, both in Washington and in newspaper sanctums in other cities, were just as prompt in disclaiming any belief that Mr. Root will add to his laurels as a peacemaker any prizes for correct prophecy. They point out various provisions in the Currency Bill, which they fear the Senator overlooked, that will surely prevent any such catastrophes as he predicts. To make assurance doubly sure, those in charge of the measure tighten up the few loose joints they can find in it, and present it to the nation confident of its ultimate approval of their handiwork.

Senator Root's chief indictment of the Glass-Owen Bill is that it does not provide sufficient security to back up the Federal reserve notes which are to be issued, nor make any provision for limiting or reducing the quantity of this reserve-note currency. This new national currency is to be secured by requiring that a certain per cent. of the amount of notes issued to any Federal reserve bank shall be based upon gold or lawful money either in its vaults or deposited with the United States Treasury, and the bank must furnish to the Government, through a Federal reserve agent, commercial paper to the full amount of the notes. Senator Root finds no restrictions placed upon the issuance of notes by the reserve provisions, "except the power of the bank to get gold" for its reserve. And turning to the description of the notes and bills which may constitute the collateral security to be offered for the loan of the Government notes, he can find "no limitation whatever by a reference either to the capital of the bank discounting, or to the deposits of the bank discounting, or to any other fixt standard," no limit to the quantity of paper of the kind described that any bank may take, "except the bank's ability to get the money to pay for the paper."

This simply means an inflated currency, continues Senator Root. For "we find no recourse by way of limitation here in anything that we impose by our bill against as vast an enlargement of the demand obligations of the United States as the reserves of the banks will permit." The new Currency Bill

"Does not provide an elastic currency. It provides an expansive currency, but not an elastic one. It provides a currency which may be increased, always increased, but not a currency for which the bill contains any provisions compelling reduction."

With an inflated currency, business grows. "With the exhaustless reservoir of the Government of the United States furnishing easy money, the sales increase, the businesses enlarge, more new enterprises are started, the spirit of optimism pervades the community." As the Senator proceeds with the picture:

"Every one is making money. Every one is growing rich. It goes up and up, the margin between cost and sales continually growing smaller, as a result of the operation of inevitable laws, until finally some one whose judgment was bad, some one whose capacity for business was small, breaks, and, as he falls, he hits the next brick in the row, and then another and then another, and down comes the whole structure.

"That, Sir, is no dream. That is the history of every movement of inflation since the world's business began, and it is the history of many a period in our own country. . . . . .

"If we enter upon this career of inflation, we shall do it in the face of a clearly discernible danger, which, tho clearly recognized, will result in a dreadful catastrophe. Gold always leaves the country in which the amount of currency exceeds legitimate requirements of business. This is an inexorable law. Putting it in another way, gold always leaves the country of high prices and goes to the country of low prices. You can kill people who are engaged in business, you can destroy business utterly, but you can not stop the operation of those inexorable economic and natural laws."

But all this discussion of the dangers of inflation ought not to be necessary, observed the speaker, since the country rendered judgment against it when supporting President Cleveland and when electing and reelecting President McKinley. Now, he exclaimed, the Democratic party, without any authority from the people, "undertakes to reverse the oft-repeated judgment of the American people on this settled question!" Answering the argument that the Federal reserve board could be depended upon to stop any tendency toward inflation, Mr. Root admitted that its members would be men of the highest character, but,

with a veiled reference to Mr. Bryan declared that they would be "under the same dominating, commanding, and irresistible influence" that was so potent in framing the Bill, and "would be bound to proceed under the same theories that were advocated in 1896 and 1900."

The one immediate result of the Root speech was the modification of certain features of the bill to provide some safeguard against the evils predicted by the New York Senator, yet the debate on the floor of the Senate revealed no Democratic fear of inflation, and Senators Owen, Williams, and others flatly contradicted Mr. Root. Mr. Owen also issued a statement to the press enumerating a dozen safeguards provided by the measure bearing his name. As he states them:

"First—Some individual must require currency which the normal supply does not furnish. In that contingency the individual must furnish his notes to a member bank unable to supply the currency and willing to apply to the Federal reserve banks for it. This is safeguard No. 1.

"Second—The Federal reserve bank must be without the currency necessary and be willing to apply to the Federal reserve agent. This is safeguard No. 2.

"The Federal reserve agent must consent. This is safeguard No. 3. The Federal reserve bank must then put up dollar for dollar of commercial bills of the qualified class maturing in not more than ninety days. This is safeguard No. 4. The Federal reserve bank must also put up 33⅓ per cent. gold. This is safeguard No. 5.

"When these commercial bills fall due the Federal reserve bank must return this money to the Federal reserve agent unless they both consent to a renewal of the accommodation. This is safeguard No. 6.

"The Federal reserve board, charged with the express duty of preventing inflation by extending accommodation required by commerce, has a right to refuse to have these notes issued by the Federal reserve agent. This is safeguard No. 7.

"The Federal reserve board is authorized by law to fix the rate of interest directly on these Federal reserve note issues. Safeguard No. 8.

"The Federal reserve board is obliged by law to determine the rate of interest charged by the Federal reserve banks for all loans made by the Federal reserve banks, including Federal reserve notes. Safeguard No. 9.

"The Federal reserve board has on it the Secretary of the Treasury, representing the Administration, who could counteract any inflation by a Federal reserve bank by withdrawing Government funds. Safeguard No. 10.

"The President, charged with supervising the affairs of the United States, could use his influence with the Federal reserve board to prevent inflation. Safeguard No. 11.

"The public opinion of the United States would not stand for inflation, and that opinion would make itself felt in a variety of ways through the member banks, the reserve banks, the Treasury Department, the Federal reserve board, and through Congress itself."

Turning to the press, we find the New York *American* and *Evening Post* reminding Senator Root that the bill provides further against inflation by requiring that "the moment any notes of one regional bank are received on deposit by another, they must, under heavy penalty, be sent back to the bank of issue for redemption." *The Evening Post* further fails to find any recognition by Senator Root of the fact that the very "outflow of gold from the United States, which would ensue whenever an inflation process should be under way," would automatically reduce the inflation. For, "the gold exported would be taken from the regional bank reserves; but when the ratio of such a bank's reserve to its outstanding circulation falls below 33⅓ per cent. [now higher], no recourse would remain for the bank but to reduce its notes." Nothing, comments the well-informed New York *Journal of Commerce*, could bring about the disastrous results which Senator Root "professes to apprehend but a deliberate purpose on the part of the reserve banks, presumably under the direction of capable banking and business men, and of the Federal reserve board, to use the power and discretion vested in them to wreck the system which they were charged with administering and bring ruin to the country." And the Springfield *Republican* has as little patience with Mr. Root's "inflation bugaboo."

On the contrary, an impressive number of papers, including the Boston *Herald* (Ind.) and *Transcript* (Rep.), New York *Times* (Ind.), *Sun* (Ind.), and *Tribune* (Rep.), Philadelphia *Public Ledger* (Ind.), Baltimore *American* (Rep.), and Detroit *Free Press* (Ind.), welcome Senator Root's speech as a timely warning, believe his arguments unassailable, and refer to the "ignorant replies" of his critics. *The Sun* points out that under the bill redemption of notes does not mean their retirement:

"Notes redeemed by or for the bank which issued them can be promptly reissued by the same bank. Redemption under the bill is no more retirement of circulation than redemption to-day is retirement of the present bank-note circulation."

The Currency Bill's "inflationary purpose" is clearly seen by *The Sun* and the Philadelphia *Public Ledger*, and the New York paper concludes most emphatically:

"In short, the bill prepares for the inflation of bank reserves after credits have reached the bursting point, for the abolition of reserve requirements against bank deposits and against note issues and for the suspension of specie payments unless the Government by mortgaging its credit is able to stem the tide of disaster. No law framed solely for the sound reorganization of the country's banking and currency system would contemplate such fearful contingencies."

HOW SECRETARY REDFIELD WOULD CURB THE TRUSTS

PRESIDENT WILSON'S WORD FOR IT that the chief concern of the present session of Congress will be "to prevent private monopoly more effectually than it has yet been prevented," and that one step toward this goal will be legislation to reduce the "debatable ground" about the Sherman Antitrust Law, lends peculiar interest to the program of trust regulation outlined in Secretary of Commerce Redfield's annual report. Many editors, in fact, take it for granted that the Secretary's suggestions rather definitely foreshadow the Administration's trust policy, which is soon to be officially formulated in a special Presidential message to Congress. Thus the Brooklyn *Eagle* (Ind. Dem.) points out that while Mr. Redfield is "an original and independent thinker," he is also "a man of good taste and of personal loyalty" who "would never think of touching so delicate a subject in a way to embarrass the future of the Administration, or to disturb needlessly the commerce and industry of the United States." The New York *World* (Dem.), however, fails to detect the Wilsonian note in the Commerce Secretary's recommendations and, "until more fully advised," rejects the idea that they throw light on the President's legislative program.

Mr. Redfield's recipe for the further regulation of "big business" includes several new laws and several thoroughgoing investigations by the Bureau of Corporations. He would have a law declaring all restraints of trade to be unreasonable, another guarding against the watering of industrial securities, and yet another forbidding interlocking directorates. At the same time he would have an investigation to determine whether or not trusts are socially and economically efficient in production, an inquiry into the question of fixing retail prices, and an inquiry into the cost of production of clothing. Of the need of new legislation he says in part:

"That there are immediate and well-known conditions that should and can be remedied by law is apparent. Some of these remedies are, for instance, a law providing that there shall be a presumption that all restraints of trade are unreasonable and placing the burden of establishing the reasonableness of such restraint upon the party alleging it; legislation looking to

A LIVING PETITION FOR NATION-WIDE PROHIBITION.

Here on the Capitol steps are men, women, and one baby who were part of the 2,000 workers against the liquor traffic who met in Washington a few days ago, paraded through the streets of the city, invaded the White House grounds, and presented for introduction in both houses of Congress a petition for a constitutional amendment outlawing the manufacture and sale of intoxicants in the United States.

fundamental charter provisions for every corporation doing interstate business; that stocks and bonds shall not be issued except for money or property at its true money value, preventing the watering of stocks; that corporations shall not hold stock in other competing companies, and that neither a person nor a corporation shall at the same time own a controlling interest in two or more competing corporations and that the officers of corporations shall not be affiliated directly or indirectly by holding office in other corporations."

"Congress will undoubtedly address itself to some of these aspects of the situation with curative provisions," he adds—a statement which fortifies some of the correspondents in their belief that his views coincide with those of the President.

But "regardless of such legislation," he goes on to say, "there still remains a fundamental economic fact to be determined," namely, "whether the trust or monopolistic form is socially and economically efficient in production, as is alleged." Upon the solution of this problem, he says, "must depend the ultimate attitude of the Government toward combinations and consolidations in business." For the investigation of this big question by the Bureau of Corporations, Mr. Redfield advocates an appropriation of $431,700. Concerning the fixing of retail prices, another subject recommended for investigation, he says:

"The law with us is for the time fixt by the decision of the Supreme Court, that the fixing of retail prices on the part of manufacturers is unlawful. If, however, new legislation should in the future be required, it is important that the truth be known lest injustice be done, not so much to the manufacturer as to the consumer.

"Some men, well informed, argue that the fixing of retail prices under conditions where competition in manufacture exists tends to promote competition. Others say that the refusal to permit the fixing of retail prices tends to monopoly because in the cutthroat competition certain to follow obviously the stronger competitor will survive and may eventually have the business in his own hands, for the law forbids the making of agreements to maintain prices, and under these circumstances the weakest must go to the wall."

Of the need of further light on the subject of the cost of production in the clothing industry, he says:

"The inquiry is not one that can be hurried. It has already been begun with a portion of the funds recently appropriated by Congress. It will be continued if the appropriation of $100,000 for this and similar work included in our estimates is made by Congress."

While many papers agree with the Baltimore *Sun* (Dem.) that this is "a pretty fair program, all in all," others hasten to indicate its weak points. Thus the New York *Times* (Ind.) and *World*, the Brooklyn *Eagle*, and the Boston *Advertiser* (Rep.) are at one in objecting to the suggestion that "there shall be a presumption that all restraints of trade are unreasonable, placing the burden of establishing the reasonableness of such restraint upon the party alleging it." Says *The Eagle*:

"We can only note that the Sherman Law, which is to be retained, is in part a criminal law, and that all jurisprudence recognizes the need of defining closely what a crime or misdemeanor is. The plan to assume that any 'restraint of trade,' which means any business contract, is criminal, and make the accused person prove that it is not criminal, runs counter to our ideas of justice. Proving a negative is difficult or impossible. It is for prosecutors to prove that the conditions involving criminality exist."

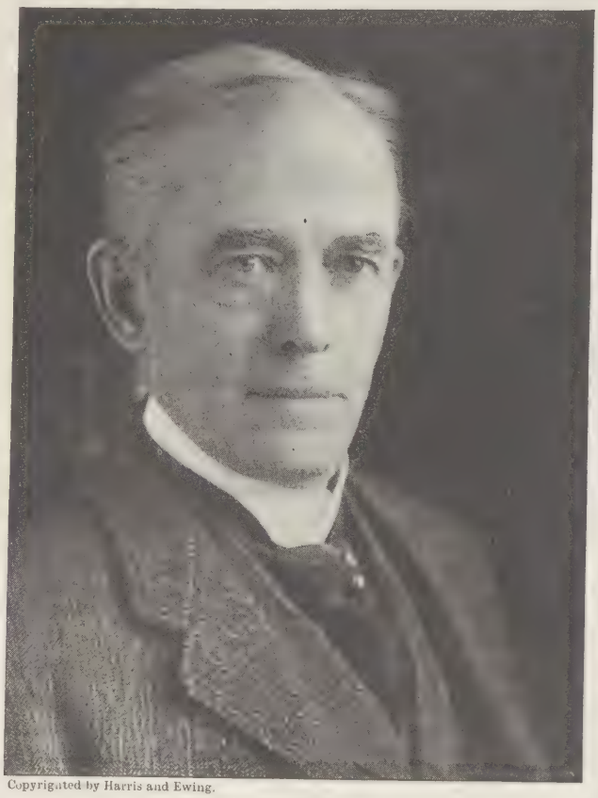
It is Mr. Redfield's program of investigation that seems specially objectionable to the New York *Journal of Commerce* (Com.), which characterizes his suggestions in this line as "impossible and absurd." This paper goes on to say:

"It has been noted by some curious minds that the present cost of Federal administration is about one-fifth the total crop yield of the United States. That is a startling comparison, but one that would be of little importance were there real results to be shown for the money spent. In fact, the Federal Government, in spite of its vaunted power of 'unselfish' direction of business, gets less per dollar laid out than any other organization. For its outlay on commissions and investigations, it gets least of all. The enormous sums spent in such work are absolutely wasted for the most part. Such outlays as are recommended by Mr. Redfield and others would be simply ridiculous and would result in no possible good."

On the other hand, his investigation proposals are applauded by the New York *Times*, and *The World* is convinced that "there is need of legislation prohibiting interlocking directorates and the emission of swindling issues of stocks and bonds."

THE RAILROAD AND ITS MONEY

AFTER THE DISCLOSURES showing what former managers of some of our embarrassed railroads succeeded in doing with their stockholders' money, the suggestion for Government control of the issue of railroad securities falls upon prepared ground. Tho there are strong objections to the introduction of the topic while rate revision



Copyrighted by Harris and Ewing.

CHARLES AZRO PROUTY,

The Interstate Commerce Commissioner who "can never suffer an advance in rates until I know the money will be properly used."

is under consideration, many editors think it timely, and can not see why railroad heads who want the Government to help them make more money by permitting an increase of freight rates should object to the same authority's seeing that the proceeds are properly spent. Among railway executives, two such experienced men as Mr. Charles S. Mellen and President Underwood, of the Erie, have no fault to find with Mr. Prouty, of the Interstate Commerce Commission, for his recent statements urging Government supervision. And to those protesting against the unfairness of such remarks in the mouth of a member of the Commission now considering the rate question, Mr. Underwood replies that "Mr. Prouty said nothing prejudicial to the case now before the Commission."

Mr. Mellen's successor as executive head of the New York, New Haven & Hartford apparently has the good will of everybody, but at recent dinners he has had to listen to some pretty frank criticisms of his road. On one occasion, as noted last week, his rather mild references to the evils resulting from the over-regulation of railways were followed by Governor Cox's seathing denunciation of the wickedness of the New Haven, as brought to light by the passing of the Christmas dividend. Some similar observations by Mr. Elliott at a more recent New York dinner, given in his honor, were quite overshadowed by Commissioner Prouty's impromptu answer to the question: "Should the Federal Government supervise the issuance of railroad stocks and bonds?" Mr. Prouty said in part, as quoted in the New York *Times:*

"The troubles of the New Haven Railroad are due to the fact that railroads have been able to buy anything they chose, to issue any securities they wished, and to manipulate them in any manner that they saw fit. How is it possible to make such abuses impossible? They will be made impossible when the Federal Government supervises the issue of securities. I think most of the men who have the interests of railroads at heart will agree with this.

"I believe that if such a law had been enacted ten years ago it would have prevented every one of the railroad scandals which have taken place in the last ten years.

"The Government can not rightfully grant an increase of railroad rates until it knows that the money so raised shall be prudently and properly expended."

Mr. Prouty explained later that this was not to be taken as a forecast of the action of the Interstate Commerce Commission in the pending rate case. He was merely voicing his own personal opinion that the railroads were likely to have "a difficult time in securing a substantial increase of freight-rates until they were able to show that they would use the money obtained for proper purposes." But in the opinion of a number of editorial observers the Prouty suggestion gains significance from the report of the conference of railroad commissioners on Boston & Maine railroad rates. This commission consisted of Mr. Prouty and the railroad commissioners of Massachusetts, Maine, Vermont, and New Hampshire. They assert that past mismanagement is responsible for much of the road's present trouble, and come to this unanimous conclusion:

"We are clearly of the opinion that there should be a substantial advance now, provided that such additional revenue can be obtained without imposing upon the public unjust and unreasonable transportation charges, and provided further that some assurance can be given that the money will be prudently expended in the public interest."

But the Boston & Maine is, after all, a small railroad and its troubles but a small part of the railroad problem. It is the suggestion of country-wide supervision of expenditures in the report and in the Prouty speech that attracts editorial attention throughout the country. "After recent distressing experiences," the New York *Times* "should say that from the investors' corner, at least, the response might be a hearty 'Amen!'" And *The Times* sees "no reason why the Eastern railroads, now hoping that their proposed rate increase may be sanctioned, should be disturbed by anything Mr. Prouty said." Indeed, it is the New York *Commercial's* belief that "a well-devised and well-administered law to regulate capitalization might improve the credit of the railroads and make it easier for them to gain additional capital." Then "bonds and stocks, sold with the approval of the Interstate Commerce Commission, would have to be taken into account in years to come when readjusting transportation rates." As the Washington *Times* sees it, "Commissioner Prouty's contention for all railroads is unanswerably sound; his requirements for the public are imperative." Legislation embodying his suggestions should have been enacted long ago, says the Newark *News*, for if it had been, "such agglomerations as the New Haven system could never have been brought together in defiance of the Sherman Antitrust Law, and such buccaneering as that which threw the 'Frisco into the hands of receivers could never have happened."

A call for immediate action comes from the New York *World:*

"A bill could be drafted in an hour by any competent lawyer. . . . It could be passed in forty-eight hours if the President demanded it. Charged with the responsibility of government, it is the immediate duty of the Democratic party in Congress to enact such legislation.

"The belief that railroad rates must be increased is general; but . . . an increase of 5 per cent. in railroad rates means an increase of practically 5 per cent. in net earnings, and the Government is under moral obligations to see that this money

goes into the treasuries of the railroads, not into the maws of Wall Street loan sharks."

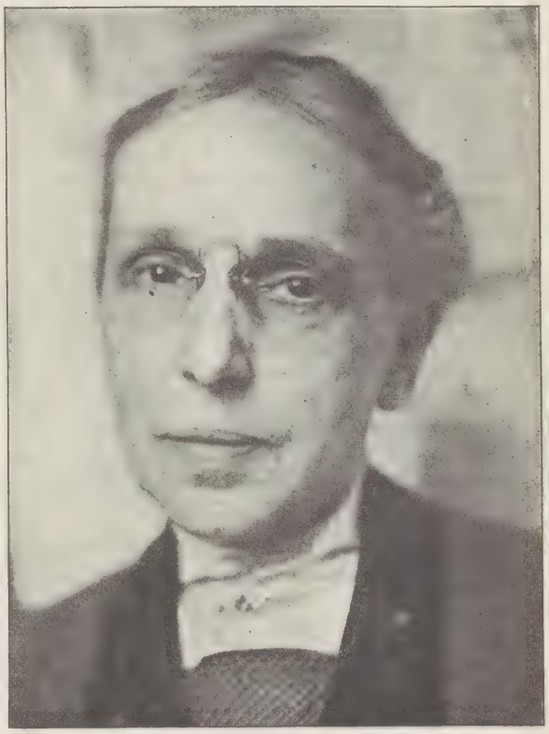
On the other hand, there are railroad heads and editors who look with little favor on Commissioner Prouty's proposition. President Bush, of the Missouri Pacific, calls it "silly," and former President Delano, of the Wabash, does not believe it would meet with the approval of the large railroad systems. In the Boston *Transcript's* opinion, Mr. Prouty's "lurid language" has "struck the country very unfavorably," while the New York *Herald* declares that "he lacks the ability to discriminate between a few badly conducted roads and many well-conducted roads." And the New York *Sun* sees an unjust discrimination when the roads are asked how they will spend their money:

"When the railroad employees want to get their wages raised no such moral anxiety is felt. They can use the extra money for what purpose they please. But the railroads are under guardianship. It is assumed that they will spend nefariously anything that the guardian Government is willing to allow them. Viciousness is imputed to them just as righteousness is imputed to the employees.

"As for the stockholders and bondholders, they are all 'rich,' especially if they own from one share to ten shares, and must participate in the wickedness and punishment."

MRS. YOUNG AND HER ENEMIES

THOSE WHO ACHIEVED Mrs. Ella Flagg Young's defeat for reelection as Superintendent of Schools in Chicago have the approval of their own consciences, presumably, but that is about the extent of the approbation discoverable, as there is a marked scarcity of kind words for them from the newspapers. The general verdict of the press is that professional politics was the chief cause of Mrs. Young's elimination from office, tho, of course, it is admitted that a multiplicity of educational ideas and personal antipathies figured in the incident. "She could not be 'used,'" says the Chicago *Journal*, one of the strongest upholders of Mrs. Young and her policies, "by the trust that levies its toll on learning, nor by the rat-hole politicians who fatten on the alms of the trust, and therefore she had to go." This appears to be an extreme view, however; practically all the other Chicago papers attribute Mrs. Young's defeat to professional politics, but the *Journal's* charge that a text-book monopoly was in league with her enemies is not generally corroborated by the local press. The New York *World* backs up the accusation, while the Washington *Times* goes only so far as to say that "Mrs. Young wanted the books she could do the most effective work with; her opponents on the School Board wanted books whose publishers had some mysterious sort of pull with Board members." "The practical ousting," declares the Chicago *Post*, "of the most efficient Superintendent the schools of the city have ever had, in the middle of the school year, without cause assigned or cause assignable—that will bear investigation—is an outrage to public decency and a grave wrong to the people." The first vote in the Board of Education on the election of a Superintendent which took place on December 10, stood: Mrs. Young, 10; John D. Shoop, 6; not voting, 4. Eleven votes were necessary to elect. When the result was announced, Mrs. Young said that the Superintendent needed the strength of all the members of the board, and formally withdrew her name. Another ballot resulted in the election of Mr. Shoop, who was first assistant to Mrs. Young. On hearing the news, Mayor Carter Harrison exprest his regret that Mrs. Young was not reelected, and when strong protests came to him from the newspapers and scores of influential individuals, he accepted the resignations of five members of the Board. These resignations, it seems, had been signed before the appointees were sworn in, which leads the Chicago *Tribune* to say that most of the trustees "were appointed for purely political reasons," and moves *The Journal* to ask Mayor Harrison why he "let this woman be thrown out of office by a petty conspiracy of his appointees." The Chicago *Record-Herald*, without minimizing the evils of professional politics in the school system, is sure that neither Mayor Harrison's "dulness nor his appointees' perfidy defeated Mrs. Young," but that she did it herself, as her hasty withdrawal made her election impossible.



STILL A POWER IN CHICAGO.

Mrs. Ella Flagg Young's retirement after her vigorous administration of Chicago's school system caused the involuntary resignation of her opponents in the School Board. Rumors that she may be persuaded to run for some other office, if she does not try to regain her former one, are especially interesting in view of the fact that women now vote in Illinois.

On the other hand, the St. Louis *Globe Democrat* thinks that "if there is to be constant friction in the schools under her management," Mrs. Young "shows wisdom in resigning." "The circumstance," adds the Missouri paper, "ought to arouse Chicago to the necessity of getting a School Board composed of representative citizens instead of mere jumping jacks." Placing most of the blame upon Mayor Harrison, the Chicago *News* explains:

"Guerrilla warfare on Mrs. Ella Flagg Young by certain men in the Board of Education is no new thing. A woman of exceptional ability as an educator and with strength of character that enabled her to hold true to her ideals under trying conditions, she administered the affairs of Chicago's great public school system with marked success. But in so doing she was able to retain the faithful support of only those members of the Board who appreciated her devotion to principle and who approved her well-directed efforts for the upbuilding of the schools.

"So a plot against her was laid in secret, was guarded assiduously from the public, and then was suddenly and secretly put into effect. Mrs. Young's reelection as Superintendent of Schools after four years of notable service was thus prevented."

It is remembered that Mrs. Young resigned last July because of friction with members of the Board, and changed her mind only when the opposition agreed to fall in line with her policies.

The moral of the lesson offered the people of Chicago by the "explosion" in the School Board, says the Chicago *Tribune*, is

that "as long as appointments to this body are made in payment of political debts, as long as they are used to catch or hold votes, we shall have trouble in the Board and trouble in the schools." *The Tribune* goes on:

"The management of the schools, therefore, is the highest of trusts, and the highest duty of the Mayor of this city is the selection of fit members of the School Board.

"That body should be composed of the best type of our citizens, men and women.

"It is largely made up of second- or third- or tenth-rate material, men who go on not because they know anything about education, not because they are able in business problems, but only because they have a 'pull.'

"This is a peril and a reproach. If there is any evil which ought to bring the men and women of Chicago to the firing line, this is the evil."

Agreeing in the main with the *Tribune's* argument, *The Record Herald* insists that "the representative system is not possible without a popular vote," and if members of the Board are to be "ordered to do things in the name of the people, they should be elected by popular vote." Addressing the country in general, the Cleveland *Plain Dealer* says that every city in the land may draw a lesson from the Chicago incident. "Keep politics off the School Board and out of the schools," it says; "the touch is dangerous." A denial of the charge that Mayor Harrison knew of a plot to overthrow Mrs. Young is contained in a public speech by John J. Sonsteby, one of the men who voted with the opposition, in which he rebukes the Mayor for holding resignations over the heads of trustees from the day of their inauguration. Mr. Sonsteby says:

"There have been some members of this Board who have been so grossly insulted by Mrs. Young that they would have voted against her a long time ago; but take it from me, it is no fun to wake up in the morning and find out that overnight you have resigned when you had no intention of doing so."

Mr. Sonsteby added that "fads have run riot, and she has made no move to stop them," and that "it even was necessary to pass in the open Board a resolution making the teaching of spelling in the public schools mandatory." Still another charge by Mr. Sonsteby is that there are 4,000 children attending half-day sessions and going to school in portable buildings, a condition which could have been eliminated if Mrs. Young had only sanctioned "a little redistricting." John C. Harding, one of the five whose advance resignations were "accepted" by Mayor Harrison, speaking on the same occasion as Mr. Sonsteby, had this to say in self-defense and in criticism of Mrs. Young:

"Mrs. Young has played politics from start to finish on the Board of Education. This matter never would have come up had it not been for her overeagerness to play politics. Mrs. Young is a politician—a much better politician than educator. I have no intention, however, of detracting from the ability which Mrs. Young's friends say she has as an educator."

One of the most pointed criticisms of Mrs. Young comes from the Boston *Transcript*, which says in part:

"Mrs. Young has been, in many ways, a great school administrator. She is an organizer of rather exceptional ability, and has given freely of her energy to the betterment of Chicago. But is she not just a bit too thin-skinned to grapple longer with the political problems that are bound to confront the head of the educational system of any large city? In these days no superintendent of any municipality can hope to have the undivided support of the board of education. The very best he can expect is a working majority, and in some cases he is fortunate to have even that."

The charge that Mrs. Young is a victim of a book trust is denied by W. E. Pulsifer, president of D. C. Heath & Company, in a letter to the New York *World*. Mr. Pulsifer names about twenty leading houses which he says are independent of each other. Among these concerns are the three or four large text-book companies which for several years have been accused of monopolizing the trade. No publishing house is named in the controversy over Mrs. Young. Mr. John C. Harding is quoted as saying that he tried to have union-made books introduced in the schools in preference to books favored by the Superintendent, but he did not say the union-made books were published by other than an independent firm.

FOREIGN COMMENT

ARMS BARRED FROM IRELAND

THE LACK of firearms has probably never prevented a ruction in Ireland—or anywhere else, for that matter—but the royal edict prohibiting the importation of arms and ammunition into the isle is at least a striking indication of the gravity of the situation in Ulster, where a force is being raised and drilled to resist Home Rule. "We are within measurable distance of civil war," said Mr. Austen Chamberlain in a speech a few days ago, and the British are confronted, he declared, "with one of the gravest crises that our country has ever seen." Mr. Bonar Law, the Unionist leader, reminded the Prime Minister in a public address of previous armed risings in Britain, and remarked pointedly:

"I ask Mr. Asquith to turn his mind to the history of the great Revolution. Then the country rose against a tyranny. It was the tyranny of a king. But other people besides kings can exercise tyranny, and other people besides kings can be treated in the same way."

A PRELIMINARY CONDITION.

SIR E. CARSON—"Look here, Mr. Asquith, I want a little quiet talk with you."

MR. ASQUITH—"Take your hand away from your hip pocket and I'll listen to what you want to say."

—*Westminster Gazette* (London).

These are strong words, but no stronger than are heard in many speeches or are written in long editorial articles. Take, for example, the following passages from the Unionist London *Pall Mall Gazette:*

"Nothing is more dangerous than the conventional assumption that England is as far removed politically, as geographically, from the volcanic zone. Her history teaches many lessons to the contrary. Her future may teach more. . . . . .

"Victory will not come without toil and resolution. It may not be attainable without the extraordinary measures required by abnormal crimes and abuses. But a country which shook off the despotism of a Charles I. and a James II. will not prove helpless against the dictatorship of Mr. Redmond. . . . . .

"We want to win the fight for liberty peaceably if we can. But that will be impossible unless the usurpers are convinced that Unionism is ready to go much further. It is the supineness of communities in general that creates the opening for 'revolutionary committees' like that by which we are now governed. It is only by teaching them that loyalty has a sword as well as a voice that they may be made to count the cost of what they are doing. . . . . .

"Ulster will not fight alone, and the Unionist party will not be her only ally. All that signifies honor, high-mindedness, and good faith in the spirit of Englishmen will be ranged on her side upon the day of combat."

DRIFTING TO DISASTER.

—*Evening Standard* (London).

The aristocratic London *Morning Post* is more guarded in its tone, but appears to be no less determined when it says:

"Every Unionist will hope that the struggle may be kept within the limits of constitutional resistance. But all are determined that if the emergency requires it they will not shrink from supporting any steps required to assist the Irish loyalists to preserve their rights and liberties. . . . A party which always regards the maintenance of internal order and stability as a vital national interest can not but feel grave misgivings over the development of any policy which threatens to end in civil strife. Its members are well aware that the Ulster movement may have very serious consequences both in Ireland and in this country. But desperate cases require desperate remedies, and Unionists believe that the crisis provoked by the fatal policy of the Government is of such a character that the people of Ulster are justified in resorting to armed force in defense of their rights, and also that those in England who hold their cause to be just must be prepared to support them to the utmost extremity."

In another issue it tells the Orangemen how to get around the ban on importing arms, and gives a hint that is of course just as applicable to the south of Ireland as to the north:

"And there is another point. Belfast is a resourceful city with a highly trained and equipped industrial population. It is certainly not beyond the resources of the Belfast engineers to make small arms and ammunition. Why, even Kimberley during the siege was able to build an excellent big gun, and if Kimberley with its limited resources could forge a big gun, Belfast could surely make a stand of rifles, or for that matter a battery of field-artillery. Indeed, this proclamation may have the effect of protection. Our free-trade Government may be unwittingly creating an arms industry in Belfast equal to that of Birmingham. We suggest to the Government that the effect of this proclamation will be to give a monopoly to any enterprising manufacturer who starts a small-arms industry in Ireland. Perhaps, indeed, this attempt by the Government to stop the passage of arms to Ireland may have the unhappy effect of precipitating the trouble it is sought to avert."

But if the Unionists are using strong words, they are met by equally direct language from the Liberals. Their most eloquent foe, Mr. Lloyd-George, is now busy elucidating his Land Bill that aims to aid the tenants in city and country, but he paused in the midst of a speech on this subject to say to those who are threatening a rebellion in Ulster:

"For those who are sincerely anxious to 'seek peace and to ensue it' in Ulster or anywhere else we extend the right hand of good will and fellowship.

"For those who are simply using Ulster's legitimate fears to fight their own selfish battles at home in this country, I have to say that if fighting begins, I will guarantee to them it will not be all on one side.

"Mr. Bonar Law talked very glibly about revolution. If revolution begins on their initiation, Ulster is not the only question that will be settled.

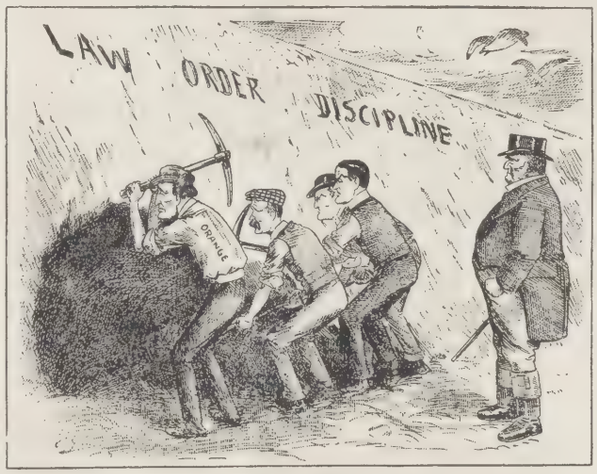
"He gave two or three examples of revolution; he forgot one. He forgot how in the French Revolution the French aristocracy exploited religious bigotry and narrowness in order to prevent democratic progress in France.

"He also forgets how all that ended for French aristocracy, their lands, their possessions, their privileges, and their powers."

Mr. H. W. Massingham, in the London *Daily News*, lays a heavy responsibility on the Ulster leaders. He writes:

"I do not share the respect which some express for the organizers and abetters of rebellion in Ulster. I think it an evil and a flagitious act in these times when the balance of social order is not too firmly established, and when we are clearly approaching the end of a form of 'social compact' with which the growing intelligence of the manual workers finds grave reason to be dissatisfied, to incite men whose grievances are contingent and imagined rather then concrete and actual, to take up arms to redress them. I know all about the abstract right of rebellion. But in this tolerant age, with all parties really keen to do 'the fair thing' by Ulster, it is monstrous to drive simple, ignorant people, as they have been driven, into this mood of uncalculating fear and fury. And it is simply suicidal for Toryism, the creed of authority. Nor do I accept the plea that Sir Edward Carson has not provoked rebellion, but is trying to regulate it. It is at once false and cowardly.

"Every art of invective and suggestion has been used to stir the always susceptible passions of Protestant Ulster. Doubtless Sir Edward will not be shot when the shooting begins. But on his head innocent blood will lie, and on men who, like Lord Lansdowne, have hinted sedition to British officers."



A DANGEROUS GAME.

JOHN BULL—"That's a dangerous game, gentlemen! If you break through that bank you'll let in a much bigger flood than you are bargaining for!"

—*Westminster Gazette* (London).

The ban on the importation of arms is considered "a very welcome sign" by the London *Daily Chronicle* "that the Government means business." And it hopes this step "will be followed by prompt action against any army officers who hereafter use rebellious language or threaten rebellious acts."

EMIGRATION INJURING RUSSIA

A NEW ELEMENT is being added to the population of North and South America by the yearly influx of about half a million Russians. This is a new movement, say the Russian press. Not long ago no such thing as emigration was admitted as at all existing. The great masses of Russian subjects who were deserting their mother country for the more hospitable shores of the United States, Canada, and other places were for the most part Jews, Poles, and Finns, and the Government was glad to rid itself of elements which it has always considered hostile to the interests of Russia. But within the last decade, according to Mr. M. Menshikov, of the *Novoye Vremya* (St. Petersburg), not only Jews and other so-called "undesirables," but peasants from Saratov, Volhynia, Minsk, and many other provinces, German colonists from the Volga region, Lithuanians, have been leaving their homes in ever-growing numbers, and crossing the ocean in quest of better conditions. "In some places the peasant emigration exceeds the Jewish," remarks Mr. Menshikov. Speaking of the effect emigration is having upon the country, he says:

"Yearly, a quarter of a million of Russian subjects set out for the United States of America, and probably as many go to the Argentine, Brazil, and Canada, which countries are calling for

A BALANCE IN MILITANCY.

—*Leader* (Regina, Saskatchewan).

THE DILEMMA.

"If I step on that I'll break my neck; and if I stop here I shan't get home at all."

—*Daily News* (London).

SIX OF ONE AND HALF A DOZEN OF THE OTHER.

workmen from all over the world and are luring them away from their neighbors by various baits. The influx of Russian laborers to the Hawaiian Islands is so great that it causes popular dissatisfaction there. . . . . .

"It has been often pointed out in the press that the consequences of the increasing emigration have already made themselves felt in the Western provinces, where there are almost no hands for agricultural work on the landholders' estates. The scarcity of labor is keenly felt also in the coal region. If such a state continues, the lack of labor power will lead to this: a half-million of Russian workmen will cultivate the lands of Prussian Agrarians and Dutch farmers; another half-million of Russian workmen will cultivate the farms of the United States and Canada; still another half-million of Russian workmen will cultivate the fields and gardens of Brazil, the Argentine, the Hawaiian Islands, and Australia. But the lands of the Russian nobility and those belonging to the peasants will be neglected and partly remain uncultivated. If the daily wage rises to 4 rubles ($2), as Canada offers, then, of course, Russian agriculture will not be able to pay it. Such prices can be paid only by highly organized . . . industry, with large capital, with agricultural machinery, elevators, railroads, steamships, great commercial agencies—under particularly favorable conditions of climate and soil. If our agricultural industry, which is yet in an incipient stage, is to be deprived of cheap labor, then Russia will become a waste. In contrast to some industrial countries of Western Europe, . . . the main instrument of labor and means of existence in Russia is the soil. The lack of enough farm-hands has always been the cause of our backwardness. The rapid decrease of labor power must ruinously affect the growth of the national wealth."

TWO EX-PRESIDENTS.

Colonel Roosevelt and ex-President Julio Roca of the Argentine Republic. The photographer makes the almost incredible assertion that this picture was taken at a horse-race on Sunday, November 9.

Measures to stop this depletion of farm-labor are in contemplation, and Mr. Menshikov says of them:

"It must not be forgotten for one moment that in Russia there are not enough working people, that in this respect she almost ranks with such countries as Australia and Canada. We must not let the flower of the working population go, but must hold it back, of course, by all permissible means. I don't at all deny the necessity of a law regulating our emigration. Such a law is needed, and it ought openly to encourage the emigration of some alien races; but as regards the pure Russian population, the law of the land must not aid its decrease and cultural exhaustion. . . . . .

"If the new generations of workmen have no room in our vast, not overpopulated regions, it only proves our ancient and dangerous ill—the unorganized state of our national industry. Our indolent bureaucracy, as well as our cowardly capital, can not regulate and employ our public energy as effectively as the Federal governments across the ocean and the more courageous and clever capital can do. Because of inability to live here, it becomes necessary for millions of Russian people, to the utter disgrace of Russia, to adapt themselves to strange, even republican, forms of government, even to new civilizations across the ocean, in order to secure a livelihood. In the second thousand years of our history we do not have to invite the Varangians, but, forsaking the 'great and abundant' land, to emigrate in large masses to all kinds of Varangians and serve them in the capacity of even common laborers."—*Translation made for* THE LITERARY DIGEST.

MR. ROOSEVELT IN SOUTH AMERICA

THE IDEAS of Colonel Roosevelt on democracy, as expounded to his audiences in South America, are said by the press of that region to have made a deep impression. As one editor naively remarks, "We seem to be listening to one who is a candidate for the highest office of the great Republic." The press of the southern continent appear gratified and a bit surprized to find that the Colonel is no idealist, no dreamer of impractical dreams, but a man who holds and puts into practise the plainest and most solid theories founded on fact. While the men of Argentina have had opportunities of listening to the statisticians and philosophers of Europe, specialists in their own departments, they think, we read, that perhaps a man like the ex-President of the United States propounds doctrines of political wisdom more suited to their needs. To quote the words of the *Prensa* (Buenos Aires):

"On the whole, the ex-President of the United States raised high expectations when he announced that he was going to deliver an exposition of his own ideas on the theme of democracy. This expectation was perhaps due to the lofty rank of the orator and his leading place among contemporary statesmen, but their anticipations were fully satisfied by the impression produced on those who attended his first address and the thousands of people not present who read the lecture in the daily newspapers after it had been translated into Spanish."

The *Prensa* seems to be convinced by the Colonel's picture of our democracy that the United States has a great offensive and defensive strength through its central government and the perfect subordination of individuals and of individual States to that government. The Civil War is cited as being fought not for one or two States, but for the whole country, to weld it into a unit. To quote the words of this leading Spanish paper of the South:

"Our illustrious guest, a conspicuous exponent and type of democracy universal and contemporaneous, a man equally learned in his subject with the most illustrious professors of it, spoke with the intonation and with the seriousness and with the certainty of a master-mind and a ruler. We seem to be listening to one who is a candidate for the highest office of the great Republic, communicating to his people his theories and his purposes in government, or as the leader of a great political party, who is recommending his program and his ideals to the acceptance of his fellow citizens, or lastly, as a President speaking to the national assembly. It would be difficult to discover an apostle of democracy more sincerely attached to that system of government. Roosevelt discarded all affected phraseology and with a virile style went directly to his idea. This produced an immense effect on the minds of his hearers. Here we saw a civic superiority and a mental superiority which subdued and enthralled, without giving offense to the peculiarities and individualities of his hearers who came prepared to listen to him. And it was thus that in the midst of a burst of spontaneous applause Roosevelt introduced a rapid and unexpected

parenthesis to this exposition of his doctrine of democracy, saying with energy and justifiable pride, 'What I say I also practise.'"

The writer goes on to speak with praise of the particular form of government which obtains in this country, saying that the United States should be a model that the South-Americans ought to follow.

POVERTY IN SPAIN

THE SAD CONDITION of Spain, especially in what were once its most fertile regions, such as Andalusia and the parts about Madrid and Cordova, presents features of poverty and misery unparalleled in any other part of Europe. So writes Mr. Albert Dauzat in the *Revue* (Paris), who proceeds to point out the causes of this general beggary and destitution among the peasantry. He says that the revolutions through which Spain passed in the nineteenth century were without result, and particularly have the disturbances in Barcelona proved ineffective in bringing about the creation of a democracy or the improvement of the financial conditions among the lower orders. He describes the aspect of Spain to the traveler in the following vivid words:

THE REAL CAUSE OF EMIGRATION.

—*Wahre Jacob* (Stuttgart).

"Nothing strikes the observer upon visiting Spain so strongly as the prevailing poverty. This is an aspect of Spanish life much more impressive than the local color and all the charms with which romanticism has enwrapt our neighbors' country.

"'When one comes to Spain from France, from England, from Germany, from Belgium, or from northern Italy, the contrast is absolutely shocking. Even in southern Italy poverty has something cheerful, something careless, about it, and seems to participate in the glow of the sunlight and the external objects of nature. The *bambino* who stretches out his hand to you is impish, ready to smile and to pirouette, and the Neapolitan is too much like *Punchinello* to take his impecuniosity seriously and not to make it a subject of pleasantry. But the Spanish poor are all sad, from the child to the old man, and even their bearing makes their distress more poignant. It seems as if the landscape harmonized with the spectacle of man, and this impression is a just one; for the desolate and stony plateaus of Castile, the plains of Andalusia, which have been allowed to return to a state of nature, were once covered with woods and richly cultivated. Pauperism has ruined the land."

The same depressing aspect is presented by the population of Madrid. He says that in traveling by train he views through the car-window Castilian villages that are lamentable in their poverty; the peasantry are men and women as thin as so many Don Quixotes, emaciated by hunger, with hard, bony faces plowed with premature furrows. Here is his picture of things in the south:

"In the south the indigence is more frightful or more apparent, perhaps, but also more real. For if the land is more fertile, the social organization is more defective, and we must also take into account the character of the people, less tenacious, more indolent, and, above all, more liable to discouragement. An English writer, Mr. Malhall, has told us that there is no situation among the peoples of the world comparable to that of the Andalusian peasant. According to the official statistics, the daily wage of the agricultural laborer is a peseta and a quarter to a peseta and a half [24 to 30 cents].

"Last year the little town of Vera, near Almeria, begged of the Spanish press to open a public subscription for the inhabitants in that region."

Such poverty encourages emigration. You see in Andalusia, he says, entire villages emptied at one stroke, for the inhabitants, driven away by poverty, start, with their priest as leader, for South America. He gives this description of the Spanish beggar:

"Begging, one of the plagues of Spain, is a natural and direct result of pauperism. The indigence of the people, with few exceptions, is a brutal fact which excuses if it does not justify completely the abundance of these *mendijos*. It is well to add that this beggary does not prevail in the country alone, where general poverty is the rule and where the priest has to suffer as much as his parishioners; it is seen also in the cities, where more easy circumstances may be found, and especially at those points visited by the foreigner who is supposed to be loaded with bank-notes and small change."

What are the causes of this poverty in Spain? The writer lays it to the bad system of government. In former times the Spanish mines in South America, which belong to the State, cost more and more to exploit, and this raised to an abnormal height the prices both of labor and of the necessaries of life, and ruined the industry and the commerce of the country. The consequence is that national labor and agriculture were stricken to the death when these foreign mines were exhausted. Moreover, the detestable fiscal system of the Government, which imposes the heaviest taxes on the petty proprietor, hinders the cultivation of the soil. As uncultivated lands do not pay any taxes, most of the great proprietors leave extensive tracts of arable land uncultivated, thus depriving the country of farms and meadows which might support a numerous population. Spain, however, this writer tells us, is waking up, and the present Government have listened to the cry of the people. The reforms to be carried out he thus outlines:

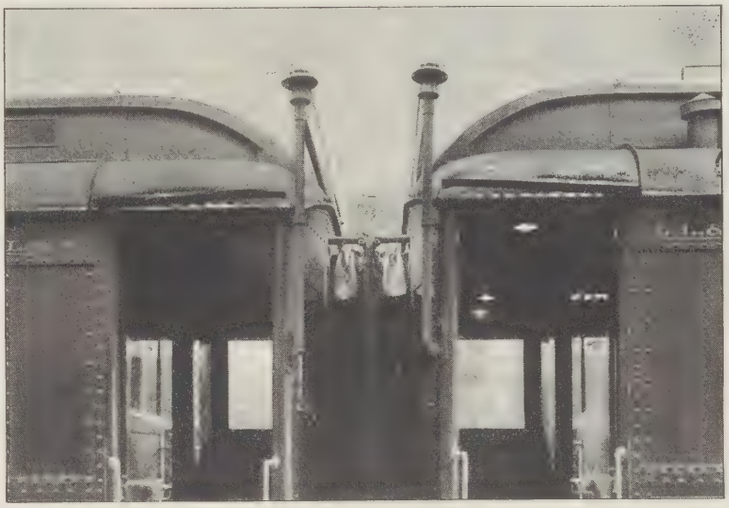
"In order to heal the wound of pauperism, labor must be organized in Spain and the régime of property improved by the gradual elimination of agricultural feudalism and by dividing up the land among the people.

"Spain must cultivate a country population and recover her sterilized soil by vast works of irrigation and reforestation in a methodical manner. But at this point financial difficulties are encountered. The intractable opposition of the great proprietors is another obstacle in the way, and we may well understand a Government hesitating to undertake a task so considerable and so difficult. The maintenance of the Liberals in power for so many years has really put back the solution of the agrarian question. The elections of the last year seemed to show that while the discontented spirits are less numerous, the poverty is less severe. The ministry of Mr. Canalejas raised the hopes of the people to a considerable degree. We pray these hopes may not be disappointed, for the Republicans and Socialists would not fail to take advantage of a popular revolutionary agitation at a time when Spain is becoming more and more stript of her troops by the maintenance of so many effectives in Morocco."—*Translation made for* THE LITERARY DIGEST.

SCIENCE AND INVENTION

C. Q. D. FOR THE RAILROAD

THE EXPRESS-TRAIN was cut off by its very speed from all outside communication until a few days or weeks ago. Surrounded by telegraph-wires, and itself a symbol of communication, it has been *incomunicado*. It could be halted by flag or block-signal, but no one could send it a warning message and it could flash no C. Q. D. in time of distress. Even the ship at sea was better off in this respect. Yet wireless equipment for trains, as a successful experiment, antedates the days of Marconi. Most of us have forgotten that the earliest adventures in wireless used, not electric waves, but electromagnetic induction. This is effective only for short distances, and, in the case of a train, required a wire running the whole length of the line. The device, tho successful in a trial, has not been practically used. But the Marconi system may easily be adapted to railway service, as is shown by a recent test on the Lackawanna Railroad. Says *The Scientific American* (New York, December 6):



THE WIRELESS ON THE LIMITED.

To call for help, receive orders, or send a common commercial message.

"In the ordinary wireless-telegraph system messages are sent and received between stations equipped with antennæ, or 'aerials,' supported on high towers. The Lackawanna Railroad has stations of this kind at Scranton, Pa., and Binghamton, N. Y., with a working radius of about 300 miles. But, of course, it is out of the question to place any structure such as an ordinary aerial on a railroad-train which has to pass through tunnels and under bridges, and a prominent feature of these tests is the use of a highly special aerial for the train installation. Some very recent experiments, notably those conducted on November 21 and 23, have demonstrated that wireless communication can be maintained to and from a train equipped with a very low aerial, viz., a quadrangle of wire supported at a height of only eighteen inches above the roof of the car. The distance between Scranton and Binghamton is about 65 miles, and in the experiments just made it was found possible to maintain communication from a train running at 55 miles per hour, part of the time direct from the train to the fixt station away from which the train was speeding; and when the train had proceeded to a point too far away for its short aerial to force signals through to this first station direct, the signals were delivered to the station by being picked up at the second station and relayed back. At no time during the tests was the train out of communication with both stations in this way.

"The arrangement used consists of four quadrangular aerials mounted on the roofs of four adjoining cars of the train, and only 18 inches above same, as stated. Each quadrangle is connected to its neighbors on the other cars by a special attaching plug. The wireless operator's station is installed in a booth in the third car of the group, so as to bring the lead from his apparatus to the forefold aerial at a point at the middle of same. The regular Marconi system is employed, except that the power is furnished by a special motor-generator set driven from the regular train-lighting dynamo, and the ground-connection is made to the rails by a wire to one of the car-trucks. The aerial is of heavy copper wire, and is insulated for the high-sending voltage (between 8,000 and 9,000 volts) by large porcelain insulators mounted on iron posts at the corners of the car.

"The special usefulness of the system was indicated the other day when the conductor of the train was taken ill while his train was running at high speed, west-bound. The next station at which a relief conductor could be obtained was Scranton, thirty miles away. Ordinarily a delay would have been unavoidable—either a stop in order to send a telegram by wire asking for a relief conductor or a wait at Scranton after arrival at that point. But, thanks to the wireless-telegraph equipment, there was no need to take either of these measures. Instead, the conductor notified the wireless operator on the train, and the latter sent a message direct to Scranton, with the result that a relief conductor was on hand to take charge when the train pulled in. In the same way an extra car, needed to provide accommodations for an unusual crowd of passengers, was ordered to be in readiness to be coupled on at Scranton, thus eliminating the delay that would ordinarily have been experienced in getting the car up from the yard.

"Apart from this emergency value, however, a demonstration that the wireless telegraph can be depended upon for unfailing communication between running trains and fixt stations and between the trains themselves may mean a revolution in the operation of trains comparable to that which followed the introduction of the ordinary wire telegraph for this purpose. When railroads can install reliably tuned equipment whereby dispatchers and train-conductors are able to keep in direct touch regardless of stops, it becomes possible to save no inconsiderable amount of time in routine train-operation—possibly equivalent in some instances to the time saved by regradings, cut-offs, and other improvements on the right of way that require such large appropriation of capital."

Other advantages of the new system are thus explained in a New York *Times* interview by Mr. L. B. Foley, the Lackawanna's Superintendent of Telegraph:

"Signals can be set by wireless as easily and as surely as they are now set by electricity conducted in wires. We have a selective device by which an operator can set a signal at any point if he has occasion to flag a train.

"This means that if any mistakes are made in the orders issued to engineers and conductors at stations or in the case of any emergency in which a train must be stopt to avert an accident, the station-operator can signal the train as certainly as if he had direct wire communication with some one on board.

"Another valuable use to which the wireless-controlled signals can be put is the handling of freight-trains on long runs. At present a through freight must make many stops between its starting-point and destination, so that orders and instructions concerning right of way can be delivered to the conductors, but these frequent stops are a source of expense and delay which will be abolished by the wireless telegraph.

"Keeping freight-trains in motion for long distances without

stops will result in great economy of operation. Railroad-operating officials know how expensive it is to start and stop heavy freight-trains, the additional cost of fuel with the attendant pulling out of drawheads and the wear and tear of equipment being no inconsiderable items in themselves. With direct communication with a train and the ability to set and release signals by wireless, dispatchers can keep in touch with conductors and make the stops needless. The wireless permits

THE OPERATOR ON THE TRAIN.

the dispatcher to board every train and deliver his instructions as surely as if he handed them to the conductor in a sealed envelop.

"That the wireless service for ordinary operating purposes is no longer an experiment is proved by the fact that the Lackawanna has already depended upon it when wire communication was cut off. Recently, when a severe sleet-storm put all telephone- and telegraph-lines out of commission in the Mountain Division of the Lackawanna Railroad, all train orders were handled by wireless between Scranton and Binghamton, where the railroad's two fixt stations are. The signals were strong and distinct, and the messages were received and sent by the operators without difficulty. The wireless was the only means of communication between Scranton and Binghamton for two hours, during which fifty-four orders were transmitted."

As soon as all trains are equipped with the wireless the total loss of communication between trains and stations will be a thing of the past, Mr. Foley believes. Such disasters as the Dayton flood and San Francisco earthquake will no longer cause communication between storm-centers and the outside world to be cut off. Messages can be flashed from fixt stations or stalled trains to the nearest station outside the trouble zone. Also derailed or wrecked trains can notify stations of accidents the moment they occur. Commercial telegrams have already been sent from the Lackawanna Limited, and a set of regular toll rates is now being prepared by the railroad and telegraph companies. Moreover:

"The service can be put into operation without increasing the train crews. Regular trainmen can easily learn the telegraph alphabet or telegraph-operators on trains can perform the duties of trainmen. Later, it may be found necessary and profitable to place a telegraph-operator on limited trains running long distances without stopping to handle commercial telegrams for the public. Telegraph offices on trains in the future may be of as much value to the public as branch offices in hotels and other places where people congregate in large numbers.

"Railroads can now go ahead and install the service without any fear of failure. There are many fields for the wireless telegraph in railroad operation, in routine business, and emergencies when lives and property can be saved by its use."

ELECTROLYSIS AS A CURE FOR LEAD-POISONING

IT IS A POOR RULE, we often hear, that won't work both ways. If an electric current may be made to deposit metal in a place where it is wanted, why not use its powers of transportation to remove metal from a region where it is not wanted? By electrolytic action we spread silver in a thin layer over articles that we desire to plate with that metal. By the same power we now remove lead from the tissues of human beings, and thereby save them from suffering and death caused by lead-poisoning. The new method of treatment, which is due to an English physician, is thus described in an editorial entitled "Electricity and Industrial Diseases," printed in *The Electrical Review and Western Electrician* (Chicago, December 13). Says the editorial writer:

"One excellent result of the conservation propaganda so prominent in this country of recent years is the attention which has been called to the problem of caring for health; in other words, the conservation of human beings. Too little attention has been given in the past to conserving of health and the combating of disease, especially those diseases which are fostered or caused by certain industrial occupations. The great toll in human lives which has been exacted in the handling of poisonous materials such as phosphorus, lead, and arsenic, is unwarranted. We already have national legislation to meet this problem in the match industry, and legislation is being sought in many of our States to lessen the hazards of disease in other industries.

"Lead-poisoning is one of the ailments which has frequently been contracted in factories where this metal is handled, altho it is claimed that under proper precautions the contraction of the disease can be prevented by such workers. Nevertheless, it is a fact that this disease has not been stamped out, and it is interesting to note the announcement in England of an electrical method of treating the disease. In a lecture before the Royal Institute of Public Health, Sir Thomas Oliver described the application of an electrolytic bath in the treatment of lead-

THE OPERATOR IN THE STATION.

poisoning. Experiments have been performed not only upon animals but upon a workman who had contracted this disease while cleaning flues in a lead-smelter. The subject was made the electrode in a bath through which current was passed, with the result that lead was transmitted to the electrolyte and the blue line along the gums of the subject, which is a well-known symptom of this disease, disappeared. The general health of the patient was also much improved.

"While it is probably too early to determine whether a complete cure can be effected by this method, it will be a welcome message to sufferers from this trouble to know that it can even be alleviated. If the method should prove capable of effecting a definite cure it would prove a great benefaction to mankind."

MAKING FIRE-DAMP TOOT A WARNING

WHEN FIRE-DAMP can be made to sound its own warning to the miner by tooting a whistle, we have come pretty near the climax in safety devices. That is the latest word from Germany. It is based on the simple fact that the note given by any type of wind-instrument depends not only on the instrument itself, but on the kind of gas in which it is blown. If a musician could live in hydrogen, and if that gas could suddenly be substituted for air in the hall where a brass band is playing, the key in which the tune was set would suddenly be raised or lowered, depending on the density of the substituted gas. This fact has been ingeniously utilized in a German invention for detecting explosive gases—the so-called "fire-damp" in coal-mines. From a descriptive article in *Continental Correspondence* (Berlin, October 29) we learn that this device had its impulse in one of the recent colliery disasters in the Rhenish-Westphalian coal district, after which Emperor William set German scientists and engineers to work to try to discover some means by which timely warning may be obtained of the presence of fire-damp in a mine, and corresponding measures of safety taken. The writer goes on:

"It is extremely gratifying to be able to announce that the efforts made in this direction have at length been crowned with a positive result. The new invention, concerning which Prof. Fritz Harber, of the Kaiser Wilhelm Institute for Chemistry, reported in person to the Emperor yesterday, seems successfully to have accomplished the task of giving a reliable and timely warning of the presence of dangerous gases in mines, and this in a far more exact and accurate manner than any other previously attempted invention of this nature. For the well-known miner's lamp, which indicates the presence of the dangerous marsh-gas, unfortunately does not always act in a reliable way. But Professor Harber and Dr. Leiser, of the same Institute, have based their endeavors not on the chemical, but on the physical qualities of fire-damp. It is a well-known physical fact that if two brass instruments are tuned to the same key and one of them is blown with air and the other with a foreign gas, they give out quite different tones. Whereas, hitherto, no one has succeeded in utilizing this peculiarity as a means of providing a warning of the presence of fire-damp, Professor Harber and Dr. Leiser have succeeded, after a number of experiments, in constructing a new kind of whistle, which is to bear the name of the 'Fire-damp Whistle,' and which will form an acoustic indicator convenient in form and easy to handle. We do not propose giving a description of the instrument here, as Professor Harber intends shortly supplying the scientific world with all necessary details. But everybody will be interested in learning the actual results achieved. Directly the apparatus is set in motion—and this is effected in a very simple manner by the jacket, which is constructed in the form of a pump, being drawn downward—the tones it produces show clearly the amount of choke-damp contained in the gas. For instance, should 1 per cent. of choke-damp be present, roughly speaking two vibrations are heard per second. As the percentage of choke-damp increases, so do the vibrations, and as soon as the explosion limit (5 per cent.) is approached, the tone assumes a characteristic trill. The ear easily distinguishes these differences, which can be distinctly heard for more than 360 feet. This new invention has been tested by mining-experts, and they are all of the opinion that it is likely to prove extremely practical."

HOW OLD IS THE EARTH?

NO ONE who has attempted to estimate the age of the earth by scientific methods has arrived at a result smaller than 50 million years. Above this the figures run up to over 1,000 millions, so every one is free to take his choice, for when Mother Earth has once owned up to 50 millions she can scarcely object to being credited with a few hundred millions more. A contributor to *Scientia*, Mr. Rudzki, has summed up no less than five of the methods by which scientific men have recently endeavored to estimate the earth's age.

RAILWAY WIRELESS AERIALS AT BINGHAMTON.

The first, and earliest, depends on measuring the length of geologic epochs by comparing the thickness of the corresponding strata with that of modern layers in alluvial valleys, deltas, etc., whose time of formation is known. Says Mr. Rudzki:

"This assumes that the rapidity of denudation and accumulation has not changed throughout the geologic epochs—a hypothesis for or against which we have no direct proof; it is possible that the sun's radiation was once more intense, the winds stronger, the rains more abundant, the rivers and currents swifter, the shock of the waves more powerful; but it is equally possible that the average intensity of all these agencies has not varied. . . . According to Sir A. Geikie the elapsed time since the beginning of the Paleozoic era is at least 100 millions of years.

"By a strange coincidence this number is identical with that obtained by Lord Kelvin by reasoning of quite a different kind. . . . Kelvin supposed that at the moment when the earth was solidified the temperature was uniform from center to surface. . . . Decreasing at first rapidly, and afterward more slowly, the temperature gradient in the crust finally reached its present value. Now the formulas of the mechanical theory of heat enable us to calculate this time, which Kelvin found to be 100 million years."

The discoveries of radioactivity, the author goes on to say, have cut away the basis of this method. We can not argue from

the cooling of the earth without taking into account the heat given out by the decomposition of radioactive substances in the crust. He passes to the third method, that of Professor Joly, who utilizes the saltness of the sea in making his estimate. We read:

"It is assumed that all the sodium chlorid in the sea has been taken by the rains from the land. It is known how much the sea contains and how much the rivers add to it annually. Supposing that the sea-water was originally fresh, it is easy to calculate when the salting began. . . . . .

"By this method, Joly found 95 millions of years; E. von Romer, 160 millions. The difference should not astonish us. Of the two fundamental data of the calculation, one, the total quantity of salt in the ocean, may be determined with sufficient exactitude. . . . But the other fundamental quantity—the quantity of salt washed down by the rivers, can not be so closely estimated. There are few rivers whose average flow and average salinity are well known. . . . .

"Let us pass on to the method founded on the disintegration of radioactive material. Helium has been discovered in mineral waters and in rocks. Soon after this discovery it was noted that the ratio between the quantity of helium and that of radioactive matter (the 'coefficient of helium') increases with the geologic age of the rock. Unfortunately, the limestones, which from their richness in fossils would seem a proper basis for a chronology, present such considerable departures from this rule that they can not be so used. . . . Some rare minerals, zircon in particular, give concordant results. . . . Supposing that zircon retains all the helium produced by the decomposition of its radioactive constituents, and that the quantity of helium produced annually is constant, the 'coefficient of helium' evidently gives the mineral's age."

A LITTLE PREMATURE.

Postmaster-General Hitchcock with a sack of letters on an aeroplane two years ago. The aviator's expression foretells the progress of the aerial post since then rather better than the optimistic smile of the Postmaster-General.

It is an interesting fact that the number of years given by this method increases with the geological age of the specimen used. One from the end of the Tertiary gives eight millions of years; one from the Eocene, at the end of the Tertiary, 31 millions; one from the Caboniferous, 150 millions, and one of primitive igneous rock, 710 millions. Other measurements run up as high as 1,025 millions of years for primitive strata.

"Finally, we should mention the determination of the earth's age made by G. H. Darwin in connection with his investigations on the evolution of the moon. To tell the truth, this is the only determination that deserves the name, since the moment of the catastrophe that severed the once single body into two distinct parts, earth and moon, must be considered as the real birth-date of both.

"For this calculation, of which it is impossible to give details here, Darwin was obliged to make several arbitrary hypotheses, so chosen that the number of years sought should be as small as possible. The figure that he obtained was 53 millions of years.

"As may be seen, all these methods, different as they are, produce results of the same order of magnitude. They all reach the conclusion that the phases of the earth's history embrace tens and hundreds of millions of years."—*Translation made for* THE LITERARY DIGEST.

FOR AN AEROPLANE POST

THE INSTALLATION of a regular aeroplane mail in France, with a view to testing it in colonies where railroads are few and deserts are many, has given new impulse to the movement for something of this kind in our own country. Already we have had many short demonstrations of the value of the aeroplane for this purpose, but there are sections of the United States and its Territories where mail service by aeroplane, over level country where there are no railroads and water short-cuts, would promptly be utilized if it were available. Says an editorial writer in *Aero and Hydro* (Chicago, Dec. 13):

"At a small extra cost, paid by the affixing of a special aeroplane delivery stamp, letters and even parcel-post packages could be delivered by aeroplane with expediency that can not be obtained in other ways under present conditions. That it would help the persons directly interested and benefit the entire country indirectly there is no doubt.

"As the exhibition business gradually subsides to normal, aviators being paid no more than they are worth for their public flights in various parts of the country, there are more and more capable fliers who would gladly accept reasonable salaries and maintenance for the carrying of public mails over distances ranging from 50 to 500 miles.

"The present laws limit the powers of the Postmaster of the United States to such an extent that he can not install aeroplanes for mail-carrying without a special act of Congress. To give him a freer hand, and at the same time advance the cause of aero utility, a bill has been prepared and printed through the efforts of Mr. Sharpe, well known as an aviation champion in Congress.

"This bill simply reads:

"'Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the Postmaster-General is hereby authorized to enter into contracts for carrying the mail by aeroplane or by another similar device when in his opinion efficiency, dispatch, or general interest of the service will be promoted thereby, and, when he deems it advisable, may advertise for proposals therefor.'

"On December 17, 1903, Orville and Wilbur Wright made the first flight with a mechanically driven aeroplane. Mr. Sharpe hopes that ten years from that date Congress will engross the new law in favor of aeroplane mail service. The bill is now in the hands of the Committee on Post-office and Post Roads of the House of Representatives.

"Letters addrest to this committee advocating the measure that is quoted above will help the good cause and help the country.

"The industrial wealth of a country has up to the present time depended upon its roads and its railways. There is no reason why the aeroplane, with its increased facility, can not exert a still more powerful influence, and there are plenty of aviators willing to serve in the capacity of mail-carriers. There are many localities where such a service would work wonders in development of the nation's resources. The passage of this bill would undoubtedly mark an important beginning in the right direction."

MIRRORS IN SCHOOL

MANY A BOY has been punished in school for playing with a mirror, and especially for making spots of sunlight dance about the room with it. That mirrors could be used as legitimate aids to instruction seems to have been discovered first in England, where an instructor in French in the Tottenham Grammar School employs them in teaching his pupils the correct pronunciation of that language. The method is described in *La Nature* (Paris, November 15) by Mr. V. Forbin, who begins his article by explaining that English children find great difficulty with French pronunciation. Their own tongue, he says, is so complex, both in spelling and in pronunciation, that a simple Latin tongue like French comes to them as a surprize. "It is," he assures us, "too simple for a brain habituated to complications!" He goes on:

"A teacher has had the idea of getting up a series of sound-charts, each of which teaches, with the aid of designs and diagrams, the way in which the lips should be opened and the tongue placed to form the sound of a French vowel, whether accented or not. The series includes two charts for *a* (open or closed), three for *e* (*e*, *é*, *è*), one for *i*, two for *o*, etc., and other charts for the real diphthongs (*ié*, *oi*, etc.) and the false (*eu*, *ou*, etc.).

"The pupils carry a little mirror to class, and, placing themselves in turn before the chart, they try, by comparing the image of their own mouths with the diagram, to give the correct position to their lips and tongues. Lessons in class follow these separate repetitions. It will be noted that the boy shown by himself in one of the photographs has not yet succeeded in pronouncing the French *a*, which is the subject of his lesson; seen in front (in the glass), as in profile, the opening of his mouth does not follow exactly the line indicated on the chart, and the tension of the chin and cheek muscles shows that the diabolical French *a* is behaving itself as it pleases. The class photograph shows better results.

"It is hard to believe that this system of teaching French does not exaggerate the difficulties; but the results reached during the past two years show that it is effective. After ten months of instruction, six hours to the week, two-thirds of the pupils are able to read French with a good accent, and when they return to school after the long vacation they have lost nothing of the principles so laboriously acquired. Now, in schools that have not yet adopted this system, nine-tenths of the children pronounce French incomprehensively at the end of their last year of study."

THE DIFFICULTY OF WASHING ONE'S HANDS

THAT ONE does not necessarily have to be personally untidy in order to spread infection is clearly shown by experiments made recently by a British army surgeon. After a man has rinsed his hands in a disinfectant, then in cold and hot water successively, then in sterilized water, and finally soaked them in absolute alcohol, one would think that they might possibly be clean; but Dr. Cummins's tests show that if there are typhoid bacilli on the fingers to start with, even these processes do not remove or kill all of them. Evidently we are relying too greatly on cleanliness to guard against disease. We should see, instead, that we do not become infected in the first place. Says a writer in *The Journal of the American Medical Association* (Chicago) in substance:

"The assertion is sometimes made that it is alone the 'filthy habits' of the typhoid carrier that make him a public danger. If he could be made to wash his hands, it is alleged, transference of infection would be prevented. Those who regard bacterial cleanliness as simply a matter of careful hand-washing are likely to obtain disappointing results if a recent experiment performed by Cummins is at all indicative of what may occur under ordinary conditions of life.

"Even when the fingers are thoroughly rubbed with a towel and the danger of finger infection thereby lessened, it is obvious that the towel in its turn may become infected. The sort of accident that may follow from such conditions is illustrated by another observation of the same author:

"On September 26, 1912, 100 cubic centimeters of soup freshly prepared from the 'stock pot' was placed in a china bowl, no attempt being made to sterilize the bowl or to cover it from the air. The tip of the experimenter's right index-finger was allowed to come in contact with [a liquid swarming with typhoid germs]. The china bowl was then lifted in such a manner that the infected finger came in contact for a moment with the contained soup. The soup was left at room temperature with free access of air and dust to the open bowl. On September 27, enumerated the bacterial contents of the 'soup.' Result: the typhoid bacillus was present apparently in pure culture, numbering 15,500 per cubic centimeter.

"Such facts as these add strength to the agitation for better supervision over the conditions of those persons engaged in serving and preparing food for large numbers of people. The action of the Pennsylvania Railroad in providing for the systematic inspection of all of its employees in the restaurant and dining-car systems has already been noted. This example should be followed by the management of other organizations engaged in the handling and serving of food on a large scale. Social clubs and similar bodies are often lax. The supervision of cooks and waiters certainly deserves more attention than it has yet received. 'Defective plumbing' is far less important."

LETTERS AND ART

STRAUSS IN COMIC OPERA

STRAUSS'S "Rosenkavalier," the latest of this extraordinary German composer's creations to reach the American stage, disported himself at the Metropolitan on December 9, and met a very mixed reception from the critics. It is "a comedy of middle age, written by middle age for middle age," and "a highly sophisticated piece" at that, points out Mr. H. T. Parker in the Boston *Transcript*, and for these reasons not likely to appeal to the youth of both sexes, who "are the support and arbiters of the American theater." The sophistication runs highest over amorous diversion, and such adventure passes for the normal and pleasurable play of human impulses, and, adds Mr. Parker, is "particularly amusing for the philosophical to watch and from which much wit and wisdom may be distilled." On that score, he thinks, the opera ought to be "tonic, broadening and humanizing to many an American mind," for "after all, we can not live by moral earnestness alone." Mr. Parker here sketches the story of this "rococo comedy of intrigue":

THE DUEL IN THE "ROSENKAVALIER."

Baron Ochs (Mr. Goritz) is drawn into a discomfiting duel with *Octavian* (Mme. Ober) for his interference in the love-affair with *Sophie*.

"The scene is Vienna in the eighteenth century when Maria Theresa was Empress, and all the personages are of the nobility and gentry—that bursting parvenu, indeed, *Herr 'von' Faninal*, has just been raised to such rank—or are dependents upon them. The action begins in the blue-and-gold chamber of the Princess, illusively pictured on the stage at the Metropolitan, passes to the white and ornate salon of *Faninal*—a silvery framing for the silver rose—and ends in a dilapidated tavern in a purlieu of Vienna in a room 'dated' by its ox-eye windows. Figures that savor of the time pass in and out of the piece—the songful tenor that seeks the *Princess's* favor at her levée; the three noble orphans that there entreat her benefactions; the milliner and the hairdresser that bob about her; the little turbaned negro boy that attends her minor biddings; the white, bebraided, cloaked, and sworded 'Heyduks' that escort *Octavian* and the silver rose; the commissary of police that descends upon the tavern, and many another to dot and diversify the canvas. Hofmannsthal sketches them swiftly and surely; as by a glance Strauss in his music sharpens a line or lays on a color in the sketches. In themselves and in the musico-dramatic treatment of them they bring and maintain the desired suggestion of place and time, matter and manner. The text, too, teems with allusions proper to the life of Maria Theresa's Vienna, but like countless details of Strauss's score, they are for the 'closet' and not for the stage. In performance they pass unheeded. Read, they interest and amuse. Perhaps the costumes spoke for them. Roller designed them in eighteenth-century intricacy and magnificence, and with curious appropriateness in color and style to the traits of each personage, one and all, they seemed to be wearing less costumes than their own clothes of their eighteenth-century day.

"The intrigue, no less, is an intrigue of rococo comedy, shrewdly invented, tho somewhat too intricately for music, and then touched and retouched with the wit and the sentiment that have been Viennese from the eighteenth century into the twentieth. Up from his provincial estates lurches *Baron Ochs*, boorish debauchee, as infatuated with his rank and his possessions as he is with his sordid skulduddery, as miserly as he is cowardly, about to marry *Sophie*, the newly ennobled *Faninal's* daughter. (Now *Faninal* is a contractor for the army about whom Hofmannsthal's wit plays as keenly as tho he were a 'captain of industry' from Pittsburg. The type is perennial temptation to savory satire.) But when *Octavian*, as kinsman and envoy from *Ochs*, bears the silver rose of betrothal to *Sophie*, according to the custom of Viennese nobles, on the instant does the messenger possess all her glances and all her speech. For her the world holds only *Octavian*, and for him, as instantly transported, there is none in it but *Sophie*—and *Baron Ochs*. Wherefore when *Ochs* makes play with *Sophie* as he might with any peasant wench, *Octavian* flings out at him and pricks him with his sword until the baron roars with pain and chagrin. Naught will soothe *Ochs* except a note making a rendezvous from a maid servant that he has encountered in the chamber of the *Princess* that morning. Now, as he is to discover presently, that 'maid servant' was no other than *Octavian*. Off swaggers *Ochs* to the appointed tavern; there does he make coarse love to the 'girl,' and there is he mocked and routed as such a libidinous and foolish old fellow richly deserved. And how happens *Octavian* to need disguise in the chamber of the *Princess* so early? Because, youth that he was, he was the lover to whom her own vanished youth drew her, as middle age crept surely upon her. She knew that some day a *Sophie* would come and he would forsake her, since youth goes toward youth and women of the world must poultice regret with resignation. When *Sophie* did come, of a sudden the girl knew and *Octavian* knew and the *Princess* knew, what—anywhere but in a play—they would not have spoken. Gently she subdued herself. She was even tranquil when memories did not prick too sharply."

The story might come in for reprobation on the score of its open carnality, especially in this day of protest against vicious plays. Mr. Krehbiel, in the New York *Tribune*, hints at such an attitude, but discovers also a sort of redeeming "moral purpose underlying the comedy which to some extent justifies its frank salaciousness." The other reviewers find the "frankness not offensive," while *The Sun* critic points out that "most of the people in the audience have no idea of what is going on." Furthermore, "the house is so large that all comedy *finesse* is lost in it." The critic of *The Evening Post* does not see a "model musical comedy" in the piece, but admits "there is some real fun in it, and enough good music to make it worth hearing once or twice." Less attention is paid in the various reviews to the

music itself than is usually the case with a new opera, the Straussian polyphony doubtless being to blame. *Musical America* (New York) quotes Alfred Schattman as enumerating 118 leading motives, more than the whole "Ring" contains. Furthermore:

"The important thematic substance of the score is eminently Straussian. In moments of extended lyrical suavity it becomes so largely by virtue of harmonization, deficient as the melodic material *per se* is in originality; then, too, one notes that other type of theme so perfectly characteristic through its bold aggressiveness, fantastic outline, and curious conformation in leaps of wide intervals. Reminiscences and clearly established kinships with themes and effects in 'Eulenspiegel,' 'Don Juan,' 'Don Quixote,' 'Zarathustra,' and 'Salomé,' are plenteous, tho in 'Rosenkavalier' these themes and effects lack for the greater part the saliency, the vividness of imagination, the suggestiveness and trenchant power of graphic portraiture of the earlier conceptions."

Nearly all praise the work of the singers, Mr. Finck, in *The Evening Post*, saying:

"Richard Strauss was, indeed, fortunate to have his work interpreted by such an excellent cast. Madame Hempel, in the rôle of the *Princess*, sang beautifully, acted the part with distinction, and produced the finest impression that she has yet made in New York. Her voice was particularly lovely in the final trio, and made one wish to hear her often in works of another style from that which she sings at the Metropolitan. Margarete Ober, as the *Rosenkavalier*, produced an excellent impression. Her voice was far better than when she sang *Ortrud;* she looked handsome as the dashing young man, and acted the part with a great deal of charm. She does not make *Octavian* awkward enough when he dons skirts, but 'Mariandel' is as attractive to the eye as the Rose-bearer himself. Anna Case sang the difficult music of *Sophie* with charm. Her pretty, clear young voice was as pleasant as her girlish daintiness.

"Otto Goritz, as *Baron Ochs*, again distinguished himself in more ways than one. His make-up and his acting were exceedingly amusing, and he had the excellent taste to tone down the *Baron's* vulgarity so to make him possible in polite society."

SHAKESPEARE AS A SNOB

ONE OF THOSE little Shakespearian controversies that are always agitating the English mind is started by Georg Brandes, the Danish critic, who has lately visited London. Shakespeare was a snob, is the latest bone to contend over. He loved aristocracies and hated the common people. He would have made a poor socialist. But Mr. Brandes thinks he was right, and rebukes such English detractors of Shakespeare as Bernard Shaw and Frank Harris. "The latest English essay," he recalls, "dwells upon his weakness, his vanity, and snobbery, and ends with the sentence that it is impossible to honor Shakespeare or to worship him." But, adds Mr. Brandes, "I do the impossible, and I do it without shame." What he sees in all these judgments is "a testimony of the unwillingness of the human mind to bow itself to the truly great." In the part of Mr. Brandes's address that has stirred up most comment he says of Shakespeare:

"His drama was addrest primarily to the best elements of the public, and his aristocratic method of regarding the course of history must have been acquired from the young aristocrats who were his patrons. His heroes were princes and barons of England; it was always they in his eyes who made history. It was Henry V. who won the day at Agincourt; yet the whole issue of this war depended upon the foot-soldiers. He could not understand that it was the rise of the middle classes and their spirit of enterprise which constituted the strength of England under Elizabeth. This explained why not a single phrase in 'King John' referred to the signing of Magna Carta. Shakespeare had a physical aversion from the atmosphere of the people. Their struggles were ridiculous to him. Their true characteristics, in his eyes, were susceptibility to flattery and ingratitude toward their benefactors. He seized with avidity upon every instance in Plutarch of the stupidity and brutality of the masses. Humanity in general was to Shakespeare not millions of individuals, but a few great entities amid millions of nonentities. He saw clearly that the existence of these few illustrious men made all that life was worth living for. Shakespeare's sonnets seemed to be the best source of acquaintance with his personal feelings. He hated women's painted faces and false hair; he disliked jealous wives and effeminate men, Puritans, and pretensions of all kinds."

Such an alinement of Shakespeare against the professors of radical sentiments is grateful to the writer in *The Daily Mail* who signs himself "An Englishman" and is supposed to be Mr. Charles Whibley. He goes Mr. Brandes one better in saying that "it is an added laurel in the wreath of Shakespeare that he never once attempted to anticipate the drab heresies of Tom Paine." Furthermore:

OCTAVIAN AND *SOPHIE.*

Mme. Ober and Anna Case as the lovers in the Strauss opera.

"Shakespeare looked upon history with the eyes of an aristocrat. And, says Dr. Brandes, he acquired this method of vision from the young aristocrats who were his patrons. Here I can not agree with the Danish critic. The aristocratic temper of Shakespeare was innate, not acquired. Intellectually he was born in the purple, a prince among men. His own heart and brain told him that all the great deeds of the world and all the beautiful poems are due to individual superiority. Truly it was Henry V. who won the day at Agincourt. Had it not been for the leadership and inspiration of the King the English archers would have drawn their bows in vain. It was, indeed, to some purpose that Shakespeare had studied Plutarch and the Chroniclers, who had taught him the wisest of all lessons, that history is nothing more nor less than the biography of great men.

"For what we know to-day as the people, Shakespeare had always a sovereign contempt. And it was a contempt which came not from mere prejudice, but from insight. He had as profound a knowledge of the shifts and hypocrises of popular government as Sir Henry Maine himself. His *Jack Cade* is a creation which time can not wither. Here we have the demagog portrayed in his true colors, as he has been familiar to the world, from Cleon to Mr. Larkin. 'Be brave then,' says the hero to his men, 'for your captain's brave and vows reformation. There shall be in England seven halfpenny loaves sold for one penny; the three-hooped pot shall have ten hoops, and I will make it felony to drink small beer: all the realm shall be in common; and in Cheapside shall my palfrey go to grass: and

when I am King, as King I will be . . . there shall be no money; all shall eat and drink on my score; and I will apparel them all in one livery, that they may agree like brothers, and worship me their lord.' There is the whole theory and practise of radicalism, as Aristophanes knew it, as Shakespeare knew it, as we know it to-day, with its bribes and doles, its paltry ambition of kingship or peerage, and its immense patronage of the patient fool who shouts or votes. Is it strange, then, that Shakespeare, who was poet and aristocrat, should see through the hollow pretense of equality and socialism?"

Mr. William Archer here steps in with a reminder to the writer in *The Daily Mail*—"that organ of the intellectual aristocracy," as he calls it—that it makes little difference whether Shakespeare was a snob in the grain or a snob by contagion. There is too much emphasis by implication on the side opposed to the democrat:

"But tho it is certain that Shakespeare was not a democrat—tho he habitually confounded the people with the mob, and held up the mob to ridicule—is it equally certain that he had any particular respect for aristocracy as such? The Englishman has no doubts on the point, and appeals for confirmation to 'Coriolanus,' which he calls Shakespeare's 'most closely reasoned attack upon the populace and popular government.' This is hard on the poet's reasoning power, for the attack is about as closely reasoned as an election cartoon. But is the reasoning all on one side? The play is certainly a lampoon on the many, but is it also a panegyric of the few? If I, like Shakespeare and the Englishman, had been 'born in the purple,' I should read it, not with exultation, but with shame.

"Let us look at it for a moment. In the first place, the Englishman speaks without the book when he says that Shakespeare 'follows in the footsteps of Plutarch' in his treatment of the plebs. He goes far beyond his authority. Plutarch stated the case of the people fairly enough. He did not, like Shakespeare, pretend that they were all fools and cowards. He remembered, what Shakespeare forgot, that they were even then conquering Italy, as their sons were to conquer the world. He relates how they were opprest, as small agriculturists are so apt to be, by the exactions of usurers.

"'Such as had nothing left, their bodies were laid hold on, and they were made bondmen, notwithstanding all the wounds and cuts they showed, which they had received in many battles, fighting for defense of their country. . . . The last war they made was against the Sabines, wherein they fought upon the promise the rich men had made them, that from thenceforth they would intreat them more gently. . . . But after that they had faithfully served in this last battle of all, wherein they overcame their enemies, seeing they were never a whit the better . . . and that the Senate would give no ear to them . . . they fell then even to flat rebellion and mutiny.'

"Of this side of the case there is no word in Shakespeare. He makes *Coriolanus* persistently jibe at them as a pack of poltroons, and suffers them to say no syllable in their defense.

"In spite of himself, however, he gives away the case of the aristocrats. He admits that the people are 'famishing,' and he shows *Coriolanus* and his party simply ignoring that condition, and proposing no remedy except massacre:

> Would the nobility lay aside their ruth,
> And let me use my sword, I'd make a quarry
> With thousands of these quarter'd slaves, as high
> As I could pick my lance.

"An amiable and helpful statesman! There is one delightfully modern touch in the play, where the well-meaning busybody *Menenius* says to the citizens:

> Why, masters, my good friends, mine honest neighbors,
> Will you undo yourselves?

"To which the *First Citizen* simply and conclusively retorts: 'We can not, sir; we are undone already.' In every labor dispute, the air rings with amplifications of these two remarks. And what is *Menenius's* reply? The famous and idiotic parable of the belly and the limbs, in which the belly (figuring the aristocracy) represents that it distributes to the rest of the organism 'the flour of all' the nutriment it receives, retaining but 'the bran' itself. Would even Lord Halsbury maintain that this fairly represents the function of an aristocracy in the body politic?"

Mr. Archer finds it scarcely possible that Shakespeare intended *Coriolanus* to stand as a type of political wisdom or sanity or any sort of excellence.

CHRISTMAS TOYS

RUSKIN, we are told, was not allowed to have toys in his young childhood, and so found exercise for his budding sense of beauty in the figures in the carpet. The modern art world may thus account for all they are prone to reprobate in his esthetic theories. But the Ruskin parents are not frequent in our day. Toys are overflowing, and those that are not already broken at the time this is read may furnish some tangible text for the London *Times's* homily. Like the true modern it has shown itself in past years, *The Times* takes up a brief for ugly toys. It is not deceived by the shallow observation that children are frightened by ugly toys, nor is it so lackadaisical as to hold that "children take to such things only too readily, and have their minds and souls insidiously and irreparably injured by familiarity with the vulgar and misshapen." First it looks at the matter from the toy-maker's point of view:

"The toy-maker is an artist, and in art, as in nature, development is a condition of existence. Noah's Arks and farms with trees may still be found on the counters of the toy-shops, to inspire the tender joys of retrospection; but if the toy-makers could make nothing else than these, their occupation would soon be gone. For it is not children who buy toys; it is their elders who buy toys for them; and it is the elders, not the sequent generations of children, who find it tedious to meet the same toys year after year. 'The market,' no less than the artists' need for development, demands ever new toys. The rhythm of progress is now an accepted law, and nowhere is it more evident than in art. A style reaches perfection; thenceforward it must decline from its Raffael, its Tintoretto, its David, its Monet; and a new path must be chosen. The art of doll-making long ago reached the perfection of formal beauty with the ravishing flaxen hair, the languorous, long-lashed blue eyes that opened and shut, the rosebud nose, the perfect Cupid's bow of a cherry mouth, the thrilling voice that said 'Pa!' and 'Ma!'—the exquisite creature that won for herself the name *par excellence* of Doll. There was no surpassing her; art could no farther go. And precisely as the art of painting has turned aside from perfection in these times of ours to stranger and more daring paths, so has the art of doll-making. The golliwog, the Billiken, and the rest are the post-impressionisms, the cubisms of doll-making; and the policeman has a flavor in him of the futurist. Modern schools of painting, say the older critics, are like the plastic efforts of children. More sensitive students know better. The Dutch doll, the rag doll (the kind with a real rag face and none of your china or 'composition' masks), these were the infantile works. The modern grotesque is a sophisticated return to simplicity, to imperfection."

And children love the grotesque just as mankind in its healthy and eager youth loved it:

"Not only the carver, who put the face of his enemy on to some monstrous devil and left him for all time spitting rain-water from the wall of a church, enjoyed the gargoyle; the uncreative multitude in the market-place looked up and laughed or thrilled. Delight in the grotesque, as well as religious fervor, induces the savage to decorate his staff or his bowl with a face of horror. And children love the sharp flavor of the ugly. We doubt whether there are many authentic cases of healthy children, the very youngest excepted, being afraid of a golliwog. There may be the thrill of adventure in the first acquaintance; but such thrills are bracing. And, as to the evil effect of ugliness, there is need for some distinction. In the first place, it may be asked whether any grotesque can fairly be considered uglier or more pernicious in effect than the flaxen-haired, blue-eyed beauty. Let alone that in this age of sex equality she is belated, a survival of the days before man had rounded Point Seraglio, for small boys a debasing specimen of womanhood, for little girls an evil example; her very prettiness, so perfect, so inanimate, sheds a soul-destroying influence. There was more life, more character, in the stiffly stately Dutch, the homely rag.

"Again, children are innocently insensible to vulgarity or evil. To them the bulging eyes, that are now so popular in toys and posters, convey no suggestion of a painful disease. They find them, in their innocent minds, amusing. Over-stout policemen with fiery noses have nothing to do, for them, with drunkenness or the ridicule of order. They will smile in their

careless sleep, hugging close what to us is a revolting brute, and wake to kiss the monster with dewy lips. There is only one form of ugliness from which they need to be protected; and it is a form not wholly absent from the designs of the artists in toys. Anything that is malignant, angry, peevish in expression; anything that suggests misery, discontentment, or hatred, should be left for the dust to gather deep upon its scowl."

KIPLING INTERVIEWED AT LAST

SHERLOCK HOLMES came back, and so also did the *Brigadier Gerard*, and doubtless many other living and dead heroes of fiction. But *Mulvaney*, whether or no he be dead already and *Dinah Shadd's* tears dried, will never come back. So Mr. Kipling recently declared to Mr. Irvin Cobb, who has achieved the nearest known approach to an interview with the man supposed to be non-interviewable. Mr. Cobb has been making his first journey to Europe, touching "all the high spots in just two months" with the idea of writing a "Cobb's Baedeker." But "Mr. Kipling won't be in it at all." Still, he visited Mr. Kipling and heard many interesting things from him which Theodore D. Rousseau has put into three columns for the New York *Evening Post*. He asked somewhat cautiously about *Mulvaney*, insinuating that that personage was not in the class with *Huckleberry Finn* and *Henry Esmond*—"so rounded out and complete that no one thinks of meeting them again." Mr. Kipling replied:

"Yes, to the best of my knowledge—the best of my memory, I might say, *Mulvaney* is dead. The last mental picture I had of him was on the edge of a cut in India, where he was directing a gang of coolies building a railroad extension. There is no doubt that he was a bit seedy and down-at-heel. So I am sure that if he has not already passed away, he soon will, and *Dinah Shadd* will bury him.

"No, he cannot come back. It won't do, you know. A character is born in your thought, and grows and is developed, and takes on virtues and vices, and becomes old, and then—well, just fades away, I take it.

"And that is the way with *Mulvaney*. I couldn't revive him—I could only galvanize him. He would be a stuffed figure with straw for bowels and glass balls for eyes, and the people could see the strings I pulled him with. No, he is gone."

No one who reads magazines can be unfamiliar with the portrait of Kipling, but Mr. Cobb's delineation of him as "a combination of Theodore Roosevelt, William Travers Jerome, and Bob Davis" is a new characterization. "He has a big jaw and he wears shiny glasses and shows his teeth like T. R., and he's a short man and blocky, with a big, strong hand." His second group of resemblances is subtler. "He has that quick felinity of movement that is the most notable outward characteristic of Jerome, and a rapid thrust and parry in conversation and a very definite, impressive way of forming and stating a conviction." Whether the rest of the description tallies him with "Bob" Davis, editor of *Munsey's*, the writer forgets to mention.

"It didn't take me two minutes in that walk through the garden, up to the house, to find out that in spite of his great work and his experience, he feels a tremendous enthusiasm about everything that is worth while. He's not a bit blasé, he isn't Englishy English—that is, not in an unpleasant sense—but is a cosmopolitan in the real meaning of the word. And the little details of life in general and in nature attract him surprizingly."

On the point of Kipling's literary likes and dislikes we are told "he doesn't care for the ultra-moderns of his craft in England," and his "disfavor falls most heavily" upon one of them—"perhaps the most widely known," says Mr. Cobb, without mentioning Bernard Shaw. The new generation in this country have escaped him, but the mention of *Mr. Dooley* brought a quick exclamation of praise:

"'Ah, Dunne!' he said. 'There you have a great man—one of the greatest of the writers of English of this century! It is an extraordinary combination. There is an Irishman writing as an Irishman, yet if I were asked to pick four samples of literary achievement that most fitly typified the impulse and the humor of your American life, three of my selections would be from *Mr. Dooley*.'

"This from Kipling—with a reputation for being so chary with his praise—it was one of the surprizes of the day to his visitor."

Kipling's description of modern war is a "mathematical problem, with some of the aspects of a surgical operation by the highest paid specialists." He sees "no more romance or glamour." On this theme he is interesting:

"I have seen very, very little fighting in India. I wrote mostly of what I had been told. But I did see war in South Africa. I said to myself before I went out, 'I'll see the dash and get the rattling inspiration of it. I'll see charges, and thin red lines, and hear hoarse commands and stand silent and thrilled in that dread hush before the battle.'

"But what a disillusion! The hush before the battle was like the quietness of surgeons and nurses before they go into the operating-room. Nobody galloped up on a lathered horse and fell unconscious after handing the general the long-waited dispatch. The general himself bestrode no charger, but sat in a comfortable camp-chair beside a neatly spread tea-table. You heard a few tick-ticks and somebody handed him a slip—the substitute for the dispatch—and he read it and drank his tea and said, 'Um-m-m, good. Workin' out just as I thought. Wire Binks to bring up that battery,' etc., etc.

"And all this method and precision and application of modern efficiency ideas makes the carnage that follows all the more ghastly. You don't know in advance just what is going to happen, you don't know how it happened; you just look at the dreadful dead men and the shrieking wounded men, and they seem to you like innocent bystanders who have got in the way of some great civil-engineering scheme and been torn and blown up."

The American Civil War Kipling calls "the great epic of the Anglo-Saxon breed—more, it was the greatest epic in the history of mankind":

"And it hasn't been written—no, nobody has written it yet. It is not yet far enough in the past; you can't get the perspective. But it will be written, and when it is written as it should be, a masterwork will be born."

The talk from here fell away to pastoral affairs:

"On a walk after lunch Mr. Cobb remarked the number and the tameness of the pheasants and the little English robins.

"'Ah, you know birds,' said Kipling. 'I don't know birds so well, tho I'm fond of them; but I do know trees. There are some good yews here. That one is said to be more than 800 years old. You'll know those—the sumach and the American dogwood and the goldenrod—I had them brought over. I love the sumach; it seems to me like the red Indian of the American forests. But I can't make it blaze here—it turns pale.

"'I wish you would stay until after dinner,' he went on. 'I'd like you to hear a nightingale that comes every evening to our garden. I'd like you to compare him with your mocking-bird. Tell me about the mocking-bird—what's he like?'

"Mr. Cobb said the Southern mocking-bird was the troubadour of the woods, a licentious scoundrel, who left Mrs. Mocking-bird at home with the little ones and went serenading other bird-beauties—but withal, a fellow with romance in his soul, a true poet.

"'Well,' said Kipling, 'I wish I could say as much for the nightingale. I know all the popular illusions about him, but the truth is, he's a blackguard with a gift of music in his throat that he can't control—a noisy, swashbuckling blackguard of the garden. He comes here at night and he proceeds to abuse all his enemies for all he's worth. It's feathered profanity in a disguise of harmony, and he gets so worked up over it that he finally ends in an inarticulate gurgle.'

"'But I would like you to see a thrush crack a snail on a stone,' said Kipling. 'I dare say you've never seen that. Well, it's most interesting. You see, when a thrush finds a stone that he likes, he brings all his snails to that particular stone, and he becomes so proficient that it takes just one crack to demolish the shell and lay the unfortunate snail bare for consumption. There's one thrush here that does it particularly well, and I know where his stone is, but I'm afraid we're too late for him."

RELIGION AND SOCIAL SERVICE

THE NEW RELIGION OF PATRIOTISM

TEN YEARS, even five, thinks Winston Churchill, the novelist, have seen a turn in the tide of skepticism. He finds among his acquaintances "many who used to be skeptical," but now admit that "there is an aspect of this extraordinary age which can not be accounted for in their philosophies." The "extreme restlessness" everywhere to be seen, he thinks, is the characteristic sign of the rise of a great spiritual wave in history. This wave seems to bear us all into the struggle. He accounts those the most fortunate who are "shoved by apparent accidents into the conflicts raging about us," for they find relief in action. They "discover the amazing fact that in working for a cause we are at once raised to higher levels of existence." Mr. Churchill contributes these reflections to *The Century* (December), whose editor informs us that they are the substance of an address delivered on the Pacific Coast. Many requests, especially from clergymen, lead to the present publication. Mr. Churchill continues:

Photographed by E. J. McCullough, courtesy of the Century Co.

WINSTON CHURCHILL, NOVELIST-PREACHER,

Who declares that whatever religion we choose, it must contain a positive, militant righteousness, and must have a social meaning.

"Most of us are like boys with cold hands looking on at a game. We are sick of eating candy, but we don't understand the game. Perhaps it appears ridiculous to some of us. Yet we have the feeling of being at cross-purposes with life, of being at the mercy of any misfortune which may strike us and bowl us over; of having no anchorage of love in anything permanent and abiding.

"We want a religion. Perhaps we are waiting for a new one. We'd plunge into life, into usefulness, if only we knew what life were; but we don't know. It may be, as is often the case to-day, that the conception of Christianity given us in our youth has failed to satisfy us, to give us an effective sanction. We are unable to say, with the conviction of our fathers, 'This is the absolute truth.' For one thing, it may seem to us that the science and the agnostic critics of the age just past have riddled that religion.

"We desire to know. These words express the dominant yearning of the age. Whither shall we turn for a religion, a sanction, a guide to life? And thus we start off on our modern Pilgrim's Progress, to seek after God, if haply we may find him.

"It is a curious fact that there are some who look with longing eyes at the church which still stands for external, or what may be called supernatural, authority. 'What a comfort,' such weary souls exclaim, 'to be able to have life solved for one in this simple fashion, to accept the teachings of a church which still claims in a special sense to be the guardian of the keys of heaven itself, to stop this buzzing in our heads, this attempting to think for ourselves!' But we find we can't enter such a church. Perhaps we do not grasp at once the significance of this fact. It is only after a little that the reason becomes plain. We look around us, and we perceive at length that every institution in our modern government, every discovery in our modern science from the telegraph which encircles the globe to the cure and prevention of disease, has been accomplished against the principle for which that church still stands, the principle of having our thinking done for us.

"It is of no avail to say that the world is no better for these discoveries. That would be to deny God's revelation. We see that this imposed authority would forbid us, in the most sacred department of life, to think for ourselves, while we are at the same time citizens of a government whose very existence depends on our thinking for ourselves. Behind every form of government ever devised under the sun there is a form of religion which fits it and inspires it. Despotism had its religion of superstition and fear; democracy has its religion of universal education and of individual responsibility, which means that there must be no organization or intermediary between ourselves and our God. If we don't believe in democracy, we shall have difficulty in finding for ourselves a country in God's world as he is shaping it to-day."

Whatever religion we choose, Mr. Churchill declares, it must contain a positive, militant righteousness, and that righteousness "must have a social meaning." This "positive righteousness" he calls the "New Patriotism," and any religion we might adopt that should be out of harmony with it would be "doing violence to out deepest instincts." Here is his analysis of the "New Patriotism":

"First, it involves, for the man or woman who has adopted it heart and soul, a change in the motive of life. The old motive in government lay in the acquisition of property; the new lies in service. This is not to say that, in an imperfect world, we should not acquire and hold property, but that we must subordinate this motive to the new and higher one. And when we look at the types which are the extreme expressions of each motive, we see that the first tends to make a man of ability into a Tweed, while the second produces a personality like Miss Jane Addams, of Chicago. This change of motive is called by psychologists 'rebirth.' 'Except a man be born again, he shall in no wise see the kingdom of God.'

"Second, the New Patriotism proclaims a positive and militant righteousness. It is by no means a gentle optimism, because it acknowledges the problem of evil and grapples with it. It seeks to put into government the maxim, 'I am my brother's keeper.'

"Third, a striking note of the New Patriotism is open-mindedness, teachableness, and hence capacity for growth. Its greatest enemies are those with closed minds, the Pharisees of the modern world, who maintain that things are best as they are, 'who neither go in themselves, neither suffer those who are entering to go in.'

"Fourth, in the New Patriotism may be mentioned the principle of individual worth, and this leads logically, through universal suffrage, to individual responsibility and democracy. We must, in government, trust those whom God trusts in this divine scheme. 'Thou shalt love thy neighbor as thyself.'

"And fifth, in the New Patriotism we are beginning to recognize at last that 'man can not live by bread alone, but by every word that proceedeth out of the mouth of God.' We realize that it would not be sufficient to give, by legal decree, food and warmth and certain material luxuries to our cold and starving brothers; that discontent and selfish greed are not to be overcome by distribution. Of what significance, otherwise, were the yearning which pervades all elements of the nation to-day? Art, literature, science, music, and philosophy have their place—yes, and religion. Are we not seeking for a religion?

"Now, in whatever religion we adopt, are we going to throw these constituents of the New Patriotism away? That would be to deny the very process by which truth accumulates, to set our faces against the evolution of the centuries, to refuse to use the science and the modern economic knowledge which makes to-day, for the first time in history, the relief of human suffering on a national scale possible. But, if these constituents are to be embodied in our acts, they must perforce form part of our religion."

ADVERTISING THE CHURCH

MORE AND MORE the repugnance against using modern advertising methods to advance church work is seen to be dying, and a literature on the subject is growing up. A recent book by the Rev. C. F. Reisner has been issued by the Methodist Book Concern and favoring comments appear in the journals of other churches. Mr. Reisner draws from his experience in New York and Denver. "Nearly two million pieces of advertising matter were circulated, including every kind that could be discovered which was within the range of the meager financial resources which every church faces." By the employment of these means, Mr. Reisner declares, large numbers of individuals were received into his congregation. *The Churchman* (New York) has a particularly favorable view of the question:

THE OLDEST METHODIST SITE

In this country was lost amid sky-scrapers before the electric sign was erected to mark it.

"Even those who are content with the conventional method of building up parochial work will agree with Mr. Reisner's claim that the Church has the right to employ every legitimate method to push itself into prominence in the community. 'It must not allow itself,' he says, 'to be counted of no importance or to be made insignificant. It is the heart, the vital center, the fountain-head of the best life of any community. It must demonstrate that fact if it is to remain worthy of the name.' We notice that one of the first examples of bill-board church advertising comes from the Anglican Cathedral in Denver. According to Mr. Reisner, bill-boards are a very effective method. People read them while waiting for the street-cars. They notice them as they walk by or drive along, or catch them from the street-car windows. One of the most curious publicity developments that we have noticed in this most up-to-date volume is the church cook-book, containing recipes written by the different members. 'This,' it is explained, 'has a peculiar value to the membership, since it interests folk in each other and furnishes reminders of individuals in the very food which is prepared. It brings forward the name of the Church at pleasant periods.'"

By a coincidence *The Edison Monthly* happens to print an especially interesting article on the subject of illuminated church signs, and traces their beginning back to the seventies of the last century. There is something dramatic about the appearance of the first one:

"When the Bowery was at its worst and the lower East Side was known the world over for its dives and gambling-houses, when Chinatown throve on its opium victims, and New York, south of Fourteenth Street and east of Broadway, was almost as vicious as Whitechapel, there appeared, one night at twilight, a glowing cross that seemed to hang in the sky just over the point where East Houston Street and the Bowery join. Until dawn it burned against the blackness of the night, causing even the gangster and thug to pause and wonder.

"This blazing symbol, high on the slender spire of St. Augustine's Chapel, was held at the time to be one of the most impressive sights in New York. No towering sky-scrapers then outshadowed it, and it could be seen almost the length and breadth of Manhattan Island. Indeed, on clear nights, sailors far out on the lower bay could discern it shining through the Narrows. For this reason, perhaps, a story went abroad that Trinity Corporation had erected the cross to serve as a beacon for ships in the harbor. This, it was said, was brought about through the efforts of a wealthy woman who paid for its erection and maintenance as a memorial to her son, who had been lost at sea.

JERRY McAULEY'S MISSION.

This light in Water Street marks a religious oasis in the darkness of down-town.

"The story, however, proved but a fiction invented by some one of the hundreds of persons who nightly visited the chapel for a closer view. But there were other stories told of the cross, many of which are retold to-day in the various Bowery missions. These attest to good influence of the spectacle on people of all creeds and nationalities.

"Gradually tall buildings became the vogue, and the 'sphere of influence' of St. Augustine's cross lessened. On the north and south, sky-scrapers shut it off until it seemed alone in a little world composed of the Bowery and the side-streets' crowded tenements. Then, later, the spire was condemned and removed, and the cross was lowered to the tower. But its work with the outside world was done. It had made plain that churches could advertise and still maintain dignity.

"Other illuminated crosses were erected. One appeared on the tower of the Judson Memorial Church at Washington Square South, where on one side huddle dirty and dingy tenements, and on the other stretch Washington Park and Fifth Avenue. Stories are heard of the influence of this cross, too. They are clothed in the dialect of the Italian and Jew and the picturesque language of members of the art colony.

"The Judson Memorial Church cross was illuminated in 1894, about seventeen years after the one erected on Trinity's Chapel in East Houston Street. Third to appear was the cross placed on the Mission Chapel of the University Place Presbyterian Church, and the fourth, as far as can be learned, is that which glows on the tower of All Angels' Episcopal Church on West End Avenue and Eighty-first Street. The fifth and sixth appeared respectively on the Second Avenue Baptist Church and the Calvary Episcopal Church at Fourth Avenue and Twenty-first Street."

About this time, we are told, "the churchmen began to see the possibilities of electric-display advertising for other than the illuminated crosses, and one by one electric signs appeared on churches and mission houses." At first the more conservative entered a mild protest to the effect that it seemed undignified to adopt modern advertising methods in the Church. But when the John Street Church, the oldest and one of the most conservative Methodist congregations in the country, erected a glowing display on the front of the building, the precedent for church advertising was firmly established. Further:

Copyrighted by the New York Edison Co.

THE FOURTH LUMINOUS CROSS

Erected in New York is on the tower of All Angels in West Eighty-first Street.

"Tucked away in the middle of a crowded business block of John Street, the old church which Philip Embury organized with five communicants in the 'best room' of his home one Sunday in October, 1768, was fast being lost track of in spite of the fact that it was the first church of its denomination in America. The somber little building was almost buried between towering sky-scrapers, and hundreds passed it daily without realizing that it was a church at all.

"It was plain to the congregation that something must be done, and finally arrangements were made for the erection of a simple electric sign bearing the name of the church. At night this display lights up the narrow business thoroughfare and attracts worshipers even from Broadway, where it is easily seen. Old John Street is the only church east of Broadway and south of Chambers Street, but it draws its members from all sections of New York and Brooklyn.

"Another church of the same denomination found itself in a similar position in another section of the city. The Union Methodist Episcopal Church in West Forty-eighth Street is located in the center of a block in the heart of the amusement district. Immediately across the way is the Long Acre Square Theater, and within a stone's throw are the scores of fashionable restaurants, hotels, and amusement places that line the Great White Way, all ablaze with electric signs. With these to attract the attention of the public, the church was hardly noticed by passing pleasure-seekers until the congregation also arranged for the erection of an electric sign.

"The Union Church is the only one remaining in the amusement district. Years ago there were several within a short distance of Long Acre Square, but with the arrival of the theaters and restaurants they were forced to move farther up-town."

There can be very little doubt that electric-display advertising counts for a great deal with the modern church, continues the writer. "If in no other way, this fact is evident from the constant increase both in the number of signs and the size of displays during the last decade":

"The first efforts of the churches, aside from the glowing crosses, were more or less feeble. Little two-lamp reflector signs were placed on the front of several buildings, dominating the usual lugubrious undertaker's sign, heretofore about the only form of advertising connected with the institution."

HOW CHRISTIANITY BREAKS DOWN CASTE

NOT ONLY is Christianity winning converts in India, but it is also breaking down caste barriers in Hindu society. The low-caste man who is a Hindu finds that his brother who becomes a Christian ceases to be an object of discrimination, says Lala Lajpat Rai, the Indian politician, in *The Indian Review* (Allahabad). And this writer, himself a Hindu and a Brahmin, advises his coreligionists to stop the drift to Christ and Mohammed by removing some of the caste distinctions. As he explains the situation:

"At Ludihana the municipality prohibited a low-caste Hindu from drinking water from the municipal taps. It was voted with one voice that so long as he remained a Hindu he could not get water from the pipes, tho, if he were to be converted to Christianity, there would be no objection. To be a Hindu alone was the mark of disgrace for this poor being. The question is whether we Hindus are ready to put aside our pride of caste and embrace in brotherly fold these poor brethren in whose veins courses the same blood as in our own, and thus build strength for ourselves; or are we going to let others take these into their own fold? Both Mohammedans and Christians are prepared to uplift them by receiving them into their own faith. During the last ten years more than 150,000 of these deprest Hindus in the Punjab alone have changed their faith."

The Hindu writer goes on, says *The Congregationalist* (Boston), summarizing his *Indian Review* article,

"to urge the high-caste Hindu to accord to the untouchable a social position. The outcaste should be put through three steps of purification, after which he should be allowed to mingle with the Brahmins, entering their temples and sitting with them at their feasts. Moreover, the children of the low caste should be allowed to go to school with the children of the Brahmin."

Such a policy, advocated by a Hindu and a Brahmin, indicates, according to *The Congregationalist*, "that the caste barrier is giving way to a remarkable degree. It shows that Christianity is having its effect not only in bringing in actual converts, but in rousing the Hindu to the broader realization that all men are brothers, regardless of the caste into which they happened to be born."

The new situation presented in India shows that caste is proving an assistance instead of a hindrance to missionary work, points out Rev. Thomas S. Donohue in *The Methodist Review* (New York). The Christian movement, taking root in a caste, tends to sweep through the entire group:

"'Class' or 'caste' movement would be a more accurate name than 'mass movement' for many of these developments in India, but the latter has become the popular designation. All that is called 'mass movement,' except certain work among hill tribes, is proceeding along caste lines, and caste, often referred to in the past as the greatest obstacle encountered in mission lands, is now proving to be an assistance in the growth of the Kingdom. When a movement of this kind starts in a caste it may run through it. If an entrance is secured into a second caste, that also may gather large proportions. In this way several movements, each distinct, may be proceeding at the same time."

MOTOR CARS ▫ MOTOR TRUCKS

TIRE PRICES DOWN

A REDUCTION in tire prices late in November caused a stir in motor circles and was especially welcome to users of cars. The reduction went as low as 18 per cent. on plain tread casings, and 10 per cent. on tubes, the discount for dealers being increased 5 per cent. *Motor World* refers to the

LIGHT-WEIGHT PARCEL DELIVERY WAGON.

reduction as having been "expected." Only one company—but that a very large one—announced a reduction at that time, altho it was expected that others would soon follow, because of a necessity for meeting the new quotations. Taking as a basis the most popular size of tire, that is, 34 by 4, *Motor World* works out the following prices, old and new:

	Old Prices	New Prices
Casings.....	$29.80	$24.35
Tubes.....	5.65	4.90

Motor World declares that the reductions have been anticipated "for three months," and particularly since the passage of the new tariff bill. As to the effect of lower prices, *Motor World* says:

"What will be the effect of the lower prices can not be foretold, but one man uncommonly well informed predicts that it will play havoc with cut-price dealers and

From "Motor Age."
MOTOR-BUS WITH A GLASS ROOF.

with those who have on hand large stocks of seconds and unguaranteed goods."

It appears further that in forecasting a reduction, the exact extent of which was expected to be made public daily, another large company stated that the lower price would be based on the lower price of crude rubber, which, after reaching the unprecedented price of $3 per pound in 1910, steadily declined until, in February of this year, it fell below the dollar-mark, and later in November best Para was quoted at 75 cents. The reduction in the duty on tire ingredients and other essentials affected by the Underwood tariff has also "exercised a downward influence."

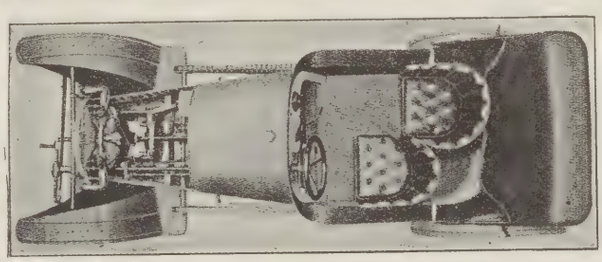
Motor Topics, in commenting on the reductions, remarks that, so far as can be seen, "the only beneficiaries are consumers." Dealers are expected to be "hit hard," because of depreciation in the value of their stock on hand. While makers have dated the new prices back to the first of November, and while this to some extent gave relief to dealers, the most of them had stock on hand purchased long before at higher prices. This paper says further:

"The tire-manufacturers themselves least of all welcome the new prices, which make a narrow margin of profit still narrower. The effect of the reduction will be to keep the schedules of prices of the different companies in about the same relative position, one to another, with all the tire-makers receiving less profits than before.

MOTOR-TRUCK MAKING ITS WAY THROUGH AN ICE CAÑON IN ALASKA.

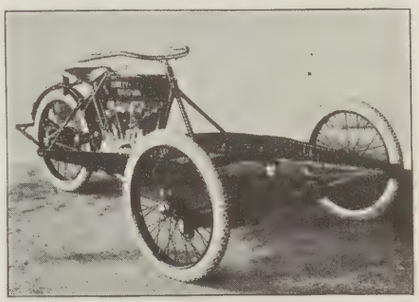
"While the tire-makers are unanimous in deprecating the reduction, they all have had to meet the situation that brought it about.

"Even those of the smaller tire companies that have prided themselves on the fact that their list prices are considerably higher than those of the big fellows, have been obliged to make concessions that correspond to the general reduction, altho still keeping their lists higher than the others.



From "Motor Age."
THE PIONEER CYCLE-CAR.

"The Goodrich move was precipitated by the fact that another prominent Akron tire-maker recently advised the tire dealers that owing to the lower price of crude rubber they might expect a lowering in the price of his tires on the first of the month. This had the effect of stimulating dealers to sell those of his tires that they had in stock in preference to all other makes, so that they might be clean of them when the

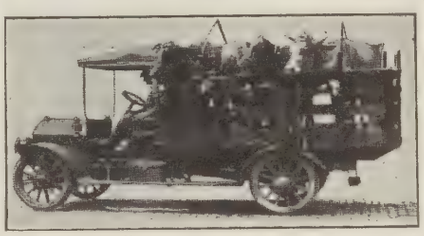


MOTOR-TRICYCLE MADE IN OHIO.

new prices went into effect and they could stock up again at the lower figure.

"To combat this incentive for the dealers to push the one make as against all others, radical action appeared necessary, and when the Goodrich company took the bull by the horns and announced a big reduction, the other companies were compelled to act likewise.

"Some trade observers have profest to see in the reduction a move by the big companies to make rough sledding for the little fellows, putting them out of business, if possible, by the low prices, but this view seems unwarranted in the circumstances. Without exception, the tire companies are exceedingly unhappy over the turn that



From "Motor Age."
TRUCK USED IN MISSOURI TO CARRY CATTLE TO MARKET.

things have taken, as in every instance it means less profit, with no increases in business as compensation. The lower prices, according to one of the makers, will not create a dollar's worth of new business for the tire companies.

"Whether tire prices will remain on the new low level they now have reached is still a doubtful question, altho any efforts on the part of the tire-makers to get together on the question have so far proved futile. At present the tire-makers seem to face what will probably be quite an extended period of low prices, with only slight and carefully graduated increases from time to time, as market conditions make them possible.

"Incidentally, the foreign manufacturers of tires, who after the recent reduction of the tariff on rubber goods from 35 per cent. to 10 per cent. have been

(*Continued on page* 1309)

In the thick of battle

IN the midst of terrific explosions and veritable flashes of lightning, the Blitz Plug hangs on and does its rough dirty work with the delicate precision of some fine instrument.

Picture the fierce job it has to hold down and you will appreciate the wonderful strength of

Blitz

"The Spark That Never Fails"

No plug of mica, no plug of porcelain, can long stand up to such punishment.

Only the Blitz, with its two-fold insulation of mica, completely encased in specially annealed porcelain—with its firing points of special alloy of platinum iridium—with its simplicity of parts—only the Blitz will last as long as the car itself.

Carelessness or accident may break the porcelain, but you can't put out the Blitz Spark.

The Blitz is standard—none better can be produced at *any* price.

Ask your hardware or accessory dealer for Blitz Spark Plugs. $1 everywhere, and worth more to you. If you don't find them, send $4 and your dealer's name for set of four Blitz Spark Plugs. Sent postpaid.

Descriptive booklet upon request.

"The Horn That Says 'Please'"
Best for motorcycles as well as autos. Special model for Fords.

CURRENT POETRY

CALIFORNIA has been holding a festival in honor of Fray Junípero, the Franciscan missionary who brought Christianity from Spain two hundred years ago. The festival was marked by services in the churches and by a great open-air pageant. The San Francisco *Monitor* prints the following poem. Mr. Walsh has not written the formal ode which such occasions usually call forth; he has made an interesting character-sketch and, with a skilful use of satire, he has brought the lesson of Fray Junípero's life home to present-day readers. Perhaps the poem would be improved by expansion—the ideas are so big that twenty lines are scarcely enough to allow them. But most writers err in the opposite direction, and the poem is complete as it stands, an admirable example of epigrammatic expression. "Took their souls like scalps upon your sleeve" is a phrase not readily forgotten.

To Fray Junípero

(1713-1913)

BY THOMAS WALSH

You who in Palma paced the cloister paving
And taught the Subtle Doctor in the schools,
Yet left your tranquil isle, the tempests braving,
To face the tomahawks and jeers of fools.

Junípero, ha! ha! you wept and shouted
And tore your bosom with the jagged stone
When the poor Indians at your sermons doubted
The clearest things philosophy had shown.

You lasht your shoulders and to blazing torches
Laid bare your breast—to make the brutes believe;
Junípero, you limped to heaven with scorches—
But took their souls like scalps upon your sleeve.

I wonder would you try your syllogisms
From Scotus if you came unto the tribes
That fill the air with fads and frills and schisms,
Or with your scourge and torches meet their gibes.

You may be certain many would debate you
Among the learned sachems of to-day;
Tho few are likely now to imitate you
And hurt themselves to bring their tribes to pray.

The Smart Set has, especially during the last few months, been printing a large amount of notably good verse. But not even its most devoted admirers would call it Puritanic—indeed, it has been criticized for its occasional latitude of expression. Therefore the following poem—by its editor—comes as a pleasant surprize. Mr. Wright's lines are strong and wholesome; their hearty masculinity comes as a rebuke to the decadents. The ultimate line of every stanza has the force of a sword-thrust.

Song Against Women

BY WILLARD HUNTINGTON WRIGHT

Why should I sing of women
And the softness of night,
When the dawn is loud with battle
And the day's teeth bite,
And there's a sword to lay my hand to
And a man's fight?

Why should I sing of women? . . .
There's life in the sun,
And red adventure calling
Where the roads run,
And cheery brews at the tavern
When the day's done.

I've sung of a hundred women
In a hundred lands:
But all their love is nothing
But drifting sands.
I'm sick of their tears and kisses
And their pale hands.

I've sung of a hundred women
And their bought lips;
But out on the clean horizon
I can hear the whips
Of the white waves lashing the bulwarks
Of great, strong ships:

And the trails that run to the westward
Are shot with fire,
And the winds hurl from the headlands
With ancient ire;
And all my body itches
With an old desire.

So I'll deal no more in women
And the softness of night,
But I'll follow the red adventure
And the wind's flight;
And I'll sing of the sea and of battle
And of men's might.

R. Gorell Barnes's "Love Triumphant and Other Poems" is a volume of thoughtful verse recently published by Longmans, Green & Company. The poem from which the book takes its name is a well-sustained composition, but its beauties are conventional, if not trite. What chiefly justifies the book is "The Express," of which we quote three stanzas below. Many poets have endeavored to put into verse the splendor of the railway; no one of them has been so successful as Mr. Barnes. There is convincing realism in his first stanza, and his whole poem is rich in music and imagination.

The Express

BY R. GORELL BARNES

When a stillness reigns in the country lanes
And the wayside station's bare,
Stirs a faint far hum that seems to come
From the spirits of the air;
And the long rails thrill with a murmur till
There's a bursting shell of sound,
A clattering roar, like the rumble of war,
And a trembling of the ground—
A scudding blast that has come and passed
With a shriek as of tortured souls,
And along the track is the echoing back
That slowly to silence rolls.
It is I the proud, the strong,
I who sway the lives of men,
Beating out my deathless song
As I speed through field and glen. . . .

. . . I chime the hare-bell as I scud through the dell,
And I am the first to spy
In the spring of the year where the snowdrops peer
And the primrose clusters lie.
There's nothing can be that is hid from me,
For I glance into cottage and field,
And Nature's design is mine, is mine,
And her mystery all revealed:
And I love to play in my boisterous way
With the dress her fancy weaves,
As I rattle along with a dancing throng
Through the home of the autumn leaves.
But little I care for her winsome air
And her anger breaks in vain,
For the snowdrifts I fight with a Titan's delight
And the blustering gales disdain
And defiantly dash through the batter and splash
Of the wayward moods of rain.
O'er the hill, along the plain,
Through the forest speeding,
On the prairie's stretching miles
With fierce hunger feeding,
I am where the bison was,
All the earth exploring,

Through the gorge and to the heart
Of the mountain boring,
'Cross the river, by the sea
Onward rushing, roaring. . . . . .

. . . I am weighted down with the spoils of the town
And the harvest of the field:
Gaunt Famine shrinks back at my sudden attack
And Plenty stands there revealed.
Tho I travel afar as the servant of War,
I am foster-mother of Peace;
I bind the world's charms on her outstretched arms
And bring to her power increase.
In my strength and my pride am I deified
As the emblem of mortal command,
For I spread o'er the world with the banner unfurled
On the march of a mighty band,
And lead a great train, like a thought through the brain,
To illumine the darkest land.
The chimney tall starts up at my call
And the factory whistle screams,
As from slumber I wake the shores of the lake
And shatter the valley's dreams.
I am clad in the dress of stern usefulness,
And I build with a tyrannous rage:
In my pride I roll on over all that is gone
And I reck not of Beauty nor Age.
For I am Progress, I am Power,
I am the spirit of to-day:
I fell the forest, clear the glade,
I drain the marsh and crowd the earth.
I roll onward, ever on
Down my God-appointed way,
Herald of the breaking morn,
Calling to a nobler birth
All the forces yet unborn
And the greatness still to be.

It is always pleasant to announce the publication of a new book by Madison Cawein. This time it is called "Minions of the Moon," and the publisher is the Stewart & Kidd Company, of Cincinnati. Mr. Cawein is a nature-poet who is not ashamed of the name. He is in love with trees and flowers and birds, and he records his love in songs that are fresh and graceful and charming. Here are some typically graphic and sympathetic stanzas.

The House of Moss

(Built by a Child in a Deep Forest.)

By Madison Cawein

How fancy romped and played here,
Building this house of moss!
A faery house, the shade here
And sunlight gleam across;
And how it danced and swayed here,
A child with locks atoss!

I pause to gaze and ponder;
And, whisk! I seem to know
How in that house and under,
The starry elf-lamps glow,
And pixy dances sunder
The hush when night falls slow.

Oh, that a witch had willed it
That those child-dreams come true!
With which the child-heart filled it
While 'neath glad hands it grew,
And dim, amort, it builded
Far better than it knew.

For Middleage—that wandered
And found it hidden here,
And, pausing, gazed and pondered
Knowing a mystery near—
A dream, its childhood squandered,
Or lost, gone many a year.

Had not Time so distorted
My vision, haply I
Had also viewed, wild-hearted,
Dreams which that child drew nigh,
And to the world imparted
Strange news none dare deny.

You'd know Campbell's Tomato Soup with your eyes shut.

You'd know it from other tomato soups by its fragrant aroma, its delightful racy flavor and its wholesomeness.

It is cooked just enough. It is not over-sweet. It has the smacking relish of a sound red-ripe tomato fresh-picked and perfectly seasoned.

Blended with other choice materials, according to the exclusive Campbell formula, it combines delicacy with a nourishing richness peculiar to itself.

In short, there's no tomato soup like Campbell's. Why not enjoy it again *today?*

"Boo! I say to needless care
Which *Campbell's Soups* will banish.
A daily share of this good fare
And half your troubles vanish."

INTERLOCKS
Stop Tire Troubles

INTERLOCK INNER-TIRE

This is the Famous Interlock Inner Tire which has ***made good*** all over the country in over a quarter million tires.

The object of the Interlock is to so increase the strength of the tire as to make it blow-out proof and practically puncture proof.

The result of using Interlocks is that new tires will give twice the usual mileage, while old or half worn-out tires will give several thousand miles ***extra*** service. No matter what the cost of a tire, the ***Interlock*** is a big economy because it makes the tire last twice as long, frees you from tire trouble and minimizes liability of accidents.

What the Interlock is

The Interlock is a complete extra inside tire which is easily placed between the regular casing and the inner tube. It is made exactly like a tire, full round, endless, and with flaps locked to the rim so that it cannot heat or chafe; and does not interfere with either speed or resilience. The construction of the Interlock makes it take the strain completely from the side and rim of the tire as well as the tread.

A New 1914 Feature—a Factory Guarantee Tag is attached to each Interlock. This insures you (no matter what happens) of a liberal factory adjustment for ***a full year from date of purchase.***

Interlocks are Sold by Dealers Everywhere. Ask your dealer to show you a set of Interlocks, and explain how they are used.

We Want to Send Our Free Book to Every Motorist

It is replete with special tire information and gives full information about Interlock Inner Tires and our complete line of tire accessories. Just send your name on a postal. Please mention your dealer's name.

PERSONAL GLIMPSES

THE RISE AND FALL OF KUEHNLE

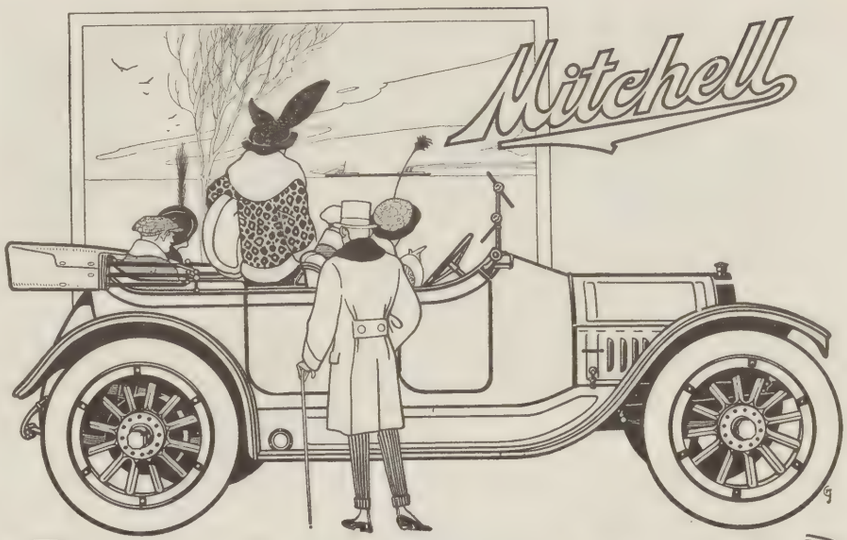
THE prerogative of Louis Kuehnle, for a long time political boss of Atlantic City, came nearer to being absolute than that of any other man in the country's history, if we are to believe current newspaper reports. The New York *Sun* says that if you were to take all the power ever exercised by Boss Tweed, the Philadelphia gang, the Pittsburg ring, Abe Ruef in San Francisco, and Tammany Hall, and concentrate it in one man you would still fall a little short of Kuehnle's clutch on Atlantic City. Nothing was done without his nod of approval, and his friends were amazed the other day when a prison sentence for voting as a Water Commissioner to award a contract to a company of which he was a stockholder was affirmed by the State court of last appeal; they had never believed such a thing could happen. Many respectable citizens had become reconciled with Kuehnle's rule; they had had him for thirteen years and regarded him as a sort of necessary evil. He had personal friends and backers among the respectable who actually grieved over his downfall, which was accelerated by President Wilson during his term as Governor of New Jersey. Some idea of how the people of the city felt toward him may be had from a *Sun* correspondent's story of a little incident that occurred on the day Kuehnle heard the news of the court's decision and made up his mind to "take his medicine." Here it is:

A big, broad-shouldered man turned from a group of men standing at "The Corner" at six o'clock in the evening with: "Well, I guess we'd better be going to dinner; come along, Jerry." And he walked slowly down Atlantic Avenue. At the mention of the name "Jerry" a very old, wire-haired terrier which had been sitting at the feet of the big man arose, wagged the stump of a tail, and then walked slowly at his side.

As the two started it seemed as if nearly all the other activities ceased on the broad thoroughfare for several blocks in both directions. The group of men just left stood as if spellbound, gazing after the pair. Pedestrians on the sidewalks on both sides of the street stopt, stared, and whispered, wonder showing in every look.

Chauffeurs leaned and peered from their taxis; drivers craned from buses and hacks; faces appeared at doors and windows all along the line. Even the motorman of a passing trolley-car applied his brake so that he might stare in safety. The most unobserving of strangers must have perceived that something extraordinary had occurred or was about to occur; to one with knowledge it was a scene of dramatic intensity.

For nearly every night of thirteen years the big man had been seen at the same hour taking that walk followed by the little dog; in the years it had become so



The Modern Mitchell

Three Remarkably Fine Models

The modern motor car *must* have a long wheel-base to insure easy riding. It *must* have refined lines and classy exterior beauty. It *must* have plenty of power and big tires and perfect springs. It *must* be fully equipped with electric self-starter, electric lights and half a score of first-class appurtenances and these *must* be included in the price.

The above paragraph briefly describes the Mitchell Little Six, the Mitchell Big Six, the Mitchell Four.

Choose any one of these cars and *you make an investment.* Any one of them is *more car* and *better car* for the money than you can find elsewhere in the automobile world—at home or abroad. And we leave *the matter of price* out of the reckoning.

The Mitchell Little Six is a six-cylinder car of *fifty* horse-power—132-inch wheel-base—five-passenger capacity. It has 36 x 4½-inch tires—Timken roller bearings front and back. It is long, low and rakish—beautiful to look at—the acme of comfort to ride in. It has all the high-class modern improvements and *they are included in the price.* And the price is only - - - - - - - - **$1,895**

The Mitchell Big Six is a six-cylinder car of sixty horse-power—144-inch wheel-base—seven-passenger capacity. It has 37 x 5 inch tires, Timken roller bearings front and back, perfect springs and luxurious upholstering. It is the biggest, the greatest and the sweetest-running car for the money in existence. And it sells for only **$2,350**

The Mitchell Four is a four-cylinder car of forty horse-power—120-inch wheel-base—five-passenger capacity. It has 36 x 4½-inch tires, Timken roller bearings front and back, perfect springs and refined, beautiful lines. It cannot be duplicated for less than $2000. But it sells for only - - - - - - - - **$1,595**

F. O. B. Racine, Wis.

All three of these beautiful models are thoroughly equipped and the equipment is included in the price of each

Equipment on all Mitchell Models Included in the Price

Electric self-starter—electric lights throughout—electric horn—electric magnetic exploring lamp—mohair top and dust cover—Bair top bow holders—speedometer—Jiffy quick-action side curtains—quick-action rain vision wind shield—Tungsten valves—demountable rims with one extra—double extra tire carriers—license plate bracket—pump, jack and complete set of tools.

G/W Globe-Wernicke BUSINESS SHOW An exhibit and demonstration of the variety, efficiency and economy of Globe-Wernicke Office Equipments and other Office Devices and Furniture. Globe-Wernicke Agency Any-where Our Store GOOD ANY TIME Between But Dec. 29th and Jan. 10th Reserved Circle A 8 sec. A row 1 to G/W

Here is your Ticket to the Globe-Wernicke Business Show

This Business Show will be held by Globe-Wernicke Agents and Branch Stores in all principal cities, commencing December 29th and continuing until January 10th.

Business and professional men who realize the need of smoother systems and increased efficiency will welcome this opportunity to get acquainted with the latest ideas and inventions in Office Equipment. A conspicuous feature, of course, will be the demonstration of—

Globe-Wernicke Filing Equipment

—Embracing: Filing Cabinets, both upright and horizontal,—the "home," so to speak, of the famous Globe-Wernicke *Safeguard* System; Unifiles, the handiest of private files, desk high, for working papers, and everything else that efficiency requires; Globe Cabinet Safes,—Steel security for privacy and protection.

Be sure to obtain Catalogs at the Business Show. If you don't know the name of the Globe-Wernicke dealer who is going to hold this Show in *your* town, write us for information.

The Globe-Wernicke Co.

Mfrs. Of Sectional Bookcases—Filing Cabinets—Stationers' Goods

Factory: Cincinnati

Over 1600 local agents. Where not represented, we ship freight prepaid.

Branch Stores: New York, Chicago, Philadelphia, Boston, Cincinnati, Washington, D. C.

Globe-Wernicke Sectional Bookcases

—are useful every day, both in the home and office; but at Holiday time especially their value is most noteworthy. The purchase of an additional section or two provides just the place for storing the Christmas Gift Books before they become damaged.

If you do not already know the manifold advantages of Globe-Wernicke Sectional Bookcases, write your name and address across the margin of this page and mail to us at once for Bookcase Catalog No. 84, containing beautiful set of library interiors illustrated in colors; or secure the same from your local agent.

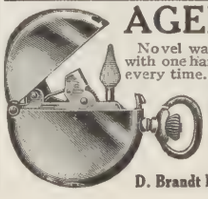
AGENTS A BRAND NEW LIGHTER



Novel watch-shaped Lighter. Operated with one hand; gives an instantaneous light every time. No electricity, no battery, no wires, non-explosive; does away with matches. Lights your pipe, cigar, cigarette, gas jet, etc. Dandy thing for the end of your chain. Tremendous seller. Write quick for wholesale terms and prices.
D. Brandt Lighter Co., 148 Duane St., N. Y.

familiar to all as to cause hardly more than a passing remark, but on this occasion for a particular reason it had become an act of such interest that every swing of the big body was studied, every wave of the big hand at the end of a powerful arm was registered, every move of the man, and the dog for that matter, was commented upon.

The walk of the big man was hardly more than 200 feet, but it was interrupted on an average every ten feet, and each stop added to the interest of the onlookers. An automobile swung up to the curb and a gray-mustached man of the banker type jumped out with outstretched hand.

"What's this I hear, Commodore!" he exclaimed as their hands clasped. "Surely something can be done. Can I do something? How about the ——?" and then came a whisper in which the emphasis on words like "Supreme Court" and "writ" made them audible.

"No use," came the answer from the big man, followed by a short, mirthless laugh. "No use; I've got to take it—thank you, but——" He turned and waved his hand to the man left standing, who was shaking his head.

"On th' level, Commodore," came an awed greeting a few feet further, "on th' level, is it——?" There was a shorter conversation. "My laws, Comdoah," was the next, "what's this they a-sayin' 'bout——?" Conversation was begun at each interruption by an exclamation and ended with the question, "Can't something be done?"

It might be in concise English or in slang, in dialect or polished phrase, but it was all alike and to each came the answer, "It's no use; I've got to take it—thank you," until the big man and the little old dog disappeared into a dark hallway, where, on the floor above, they live in a modest flat.

Kuehnle says his sentence was procured on a technical charge upon which many office-holders could be convicted, and boasts that Atlantic City has had extraordinary growth since he took the political reins. The *Sun* man reviews his career thus:

Kuehnle evolved himself into a political boss of the absolute type and became one before any one else knew it or perhaps even he was conscious of it. He is fifty-six years old, unmarried, and came to Atlantic City from Egg Harbor on September 1, 1875. His father was a hotel man, owning one big hotel in Egg Harbor and another in Atlantic City—Kuehnle's hotel, the corner at Atlantic Avenue and North Carolina Street.

Louis Kuehnle took charge of the Atlantic City hotel and ran it until 1907. He was a typical country-hotel man, and the three-story frame building where the destinies of Atlantic City were settled for so many years is an old-fashioned place with resort modifications in the way of lunch counters and oyster bars.

Kuehnle ran it from barroom to dining-room in the old-fashioned way, and there he made his first acquaintance with the voters. He was liberal by habit, always free with his money, ready to help the needy at all times.

He does not remember just when he went into politics. He just met people

day after day, and because of his open-hearted liberality made them his friends. He is not a man of dissipations of any sort, but he is a hail-fellow-well-met in other ways. He could have had no political ambitions at first because he was a Democrat in the early days, and a Democrat does not stand much of a chance in the banner Republican county of New Jersey unless the Republican leader says so.

The late Louis P. Scott, a brilliant politician, was the Republican leader of Atlantic City when Kuehnle grew to manhood, and with ex-Congressman John Gardner, recently retired, and Smith E. Johnson ran the county. The triumvirate divided patronage and controlled destinies, and Kuehnle attracted Scott's attention. The late F. P. Stoy, then Mayor of the city, appointed Kuehnle as a Democrat to the non-partizan Board of Water Commissioners fifteen years ago, and Kuehnle emerged from his first term a Republican.

Scott began to allow the power to drift away from him and, to protect himself, made Kuehnle and State Senator Edward S. Lee his lieutenants. In the course of a few years Scott died and his two lieutenants began to fight for his place. Kuehnle won.

Kuehnle became leader about the time Richard Croker was telling the Mazet committee in New York that he was "for my pocketbook every time," and he seemed to adopt that as his motto. He worked it along with a most ambitious program for the improvement of the city.

"A bigger and better Atlantic City" became his war-cry. "Boost, don't knock," was another. Criticism under that plan became an attack on the city. Hotelkeepers would shudder as peripatetic reformers would raise their voices. "It will hurt the town," said they. "Don't spoil the season."

In line with his policy Kuehnle immediately started to make Atlantic City bigger and better, and now it must be admitted that he leaves it much bigger and better in an architectural sense than it was before. True, it has been asserted that one out of every three dollars expended in beautifying the city failed to attain the object for which it was appropriated, but the two other dollars were made to work.

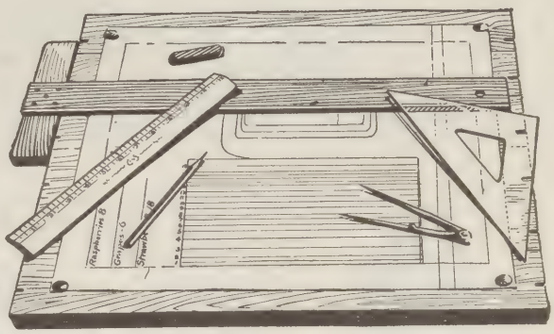
He wanted a bigger and better Boardwalk and he got it. He wanted a sewage system and he got it. There was a telephone monopoly, and he broke that up by starting an opposition company now controlled by the independent telephone system. The electric lighting was unsatisfactory and expensive. Kuehnle got back of a company which started up in opposition and brought down the price.

Gas was selling around $1.25 a thousand feet, and Kuehnle organized a gas company, which in the end brought gas down to 90 cents a thousand.

The street-railway service was unsatisfactory, and Kuehnle organized the Central Passenger Railway Company, ultimately sold to the Atlantic City and Shore Company, but it gave Atlantic City first-rate street-railway transportation. He organized a hot-water heating company, which did not make a success.

Street paving had been a controversy for years in the city. As the beach frontiers pay the taxes while the meadows do

Get Out Your Winter Garden Tools



When the ground is frozen you can't dig in the dirt, but you can sit beside the fire and draw plans of the garden that is to be—and that's what you should do. Then when the sap begins to run you'll be ready to get busy with

The Summer Garden Tools

NOW is the time to get acquainted with

Everyman's Garden

a week-by-week feature of THE COUNTRY GENTLEMAN—a year-round diary for the man with the small place.

When the snow is on the ground it tells you how to plan.
When spring is in the air it tells you how to plant.
When summer has arrived it tells you how to cultivate.
And when autumn comes it tells you how to reap the harvest and keep the fruits for winter.

It's a correspondence course in gardening for over-the-city-line man, with fifty-two lessons a year—at less than three cents a week—written by men who are worthy to instruct because they, themselves, can make things grow.

And then there's the hen: Stop thinking of poultry in terms of dollar-a-dozen eggs and forty-cents-a-pound broilers. Be your own producer and middleman. A few square yards in the back yard is all you need to start. You are not going into business and don't require a $10,000 poultry plant. You merely want to raise eggs and broilers for your table.

There's a chicken expert now planning to start a chicken family for you to watch. Week by week he will tell you the history of that brood, from the breeders to the egg, the hatching, rearing the young chicks, feeding them, doctoring them, bringing them up until they begin to lay. You can't go far wrong on the poultry question with the history of this family before you.

If You are Farming a Little Back Yard or Ten Thousand Acres You Need

The Pride of Accuracy

There is a fine sense of pride and comfort—a feeling of safety—that is derived from the ownership of a Hamilton Watch. Where accuracy and durability are matters of serious and vital importance, the

Hamilton Watch

"The Railroad Timekeeper of America"

is sure to be found a favored choice.

Over one half (56%) of the men on American Railroads where Official Time Inspection is maintained carry Hamilton Watches.

Engineer T. P. Howard, of the "California Limited," has carried a Hamilton for years with entire satisfaction

Hamilton Watches are made in correct sizes for men and women. Movements only are $12.25 and upward. Complete watches, certain sizes, are $38.50 to $150.00. Ask your jeweler about them; also about fitting your present watch case with a Hamilton movement.

Write for "The Timekeeper"

It illustrates and describes the various Hamilton models and is a book well worth reading if you are thinking of buying a fine watch.

Hamilton Watch Company
Dept. L, Lancaster, Pennsylvania

the voting, the beach feared the cost of paving the streets. Kuehnle went in for paving, and indirectly started the crusade which led to his conviction. He fought for paving, first bithulitic and then asphalt, and he won out.

Atlantic Avenue is magnificently paved, and so are the other avenues and most of the streets. It cost the city heavily, but the resort has better streets.

In all these public improvements Kuehnle received a reward. The companies he organized all sold out at good figures, for they had no difficulty in obtaining franchises on liberal terms, and he amassed wealth. They were not his only sources of income, however.

There was the little matter of the Consumers' Brewing Company, which brings up another feature of the old political methods of Atlantic City.

Kuehnle controlled the City Council, which was the center of all power in the city. It exercised every municipal function. It awarded all licenses and all privileges. Among other things, it awarded all contracts for improvements and passed upon all bills.

Consumers' Brewing Company beer became very popular immediately. It was generally reported, without absolute certainty, that if a hotel man wanted to get along, have his license renewed, and escape trouble he would take a step in the right direction by buying Consumers' beer. He did and the brewery made money; so did Kuehnle.

He went into banks and was for a time a director, as he is now a stockholder, of five banks, trust companies, and safe-deposit institutions; and these concerns flourished. Thousands of people feared him or sought his favor, and it was just as easy to do business with his banks as with others. He became interested in other companies which supplied public necessities, and they, too, prospered. To proceed:

While fortune favored him personally, it goes without saying that Kuehnle always kept his machine well greased. He made money, but he was willing to share it with lieutenants, and they all prospered.

He reached out into the county early, because the county has a very important influence on Atlantic City. He insisted that he should always name the Sheriff, and as a matter of fact alternated two men in that office for years. He had the naming of the prosecutor and of course the Judge. He hasn't got the Judge now by any means.

Mr. Wilson when Governor, two years ago, sent a very keen, capable Judge in Samuel Kalisch, of the Supreme Court, down from Newark to try Kuehnle.

Kuehnle wanted the county law officers, because Atlantic City did not want unfavorable consideration in one important thing. The beach front, or a great part of it, was strong in the belief that it must be allowed to sell liquor on Sunday. One part of it also believed there should be opportunity for those inclined to gamble and was in favor of winking at other irregularities.

With hostile courts there was much danger, so that Kuehnle did not lose any

GREAT BEAR SPRING WATER
50c per case of 6 glass stoppered bottles

power because there were few prosecutions for such violations, few true bills found by grand juries selected by the Sheriff or fewer verdicts by petit juries, also selected by the same official.

There is no doubt that all this favor was commercialized and that some one made a great income from the annual secret taxes so imposed.

When it came down to practical politics recent trials in which many convictions were had are illuminating. The system in vogue here has been denounced as the rawest ever known in the country.

Votes became merchandise, just as a pound of sugar or a yard of calico, and there was no concealment of the fact. It has been testified that $2 was the ruling price for each vote, and there was no cut in the price for repeating.

Once men stood in the middle of Atlantic Avenue with overcoat pockets crammed with $2 bills and handed them out. Later that became inconvenient because of the new ballot system, and they hired store buildings for the purpose.

It was testified at a recent trial which resulted in the conviction of Tom McDevitt and young Amoy that a store was hired in one ward and fitted up with a counter. There were a cashier and a bookkeeper. Each seller of his vote would come in and receive a sheet of carbon paper the size of the regular ballot and a sample ballot. He had to take his carbon and the sample into the booth with him and superimpose the regular ballot on the carbon over the sample ballot. His markings were then registered, and when he returned to the store if the markings were right he received his $2.

If he wanted another ballot he could get it and try again. One negro who was convicted swore that after repeating in Philadelphia and Camden elections in the morning he came to Atlantic City and voted fifteen times, receiving $2 for each vote.

The repeaters were taken around in gangs of twenty, riding together in trolley-cars. As they went from ward to ward they would exchange hats and receive names under which to vote.

In one ward they voted forty-six dead men in one election. There were never objections, protests, or investigations. "What do you want to do—injure Atlantic City and hurt business?" silenced outcry.

So long as Kuehnle's activities were confined to contracts and concessions made by the City Council he could not be touched. No one ever accused him of election irregularities, because as leader he left that work to his lieutenants, and the negroes were always voted solidly by their leaders.

Each municipal activity was in charge of a different man and everything was systematized. There could not be any trouble and would never have been any trouble if it had not been for a stranger, so Kuehnle's friends say. They are very bitter against William I. Cherry to-day, and Kuehnle himself has no warm feelings toward that energetic Tennessean.

Cherry appeared in Atlantic City about seven years ago, representing a bithulitic company anxious to obtain contracts for

Westinghouse Electric Systems were selected because:

These systems are made by a Company with a world-wide reputation, whose name on electrical apparatus is accepted everywhere as a guarantee.

Simplicity, the hall-mark of experience, characterizes the construction. Only one wire instead of two for each connection. There are no current or speed regulating devices to get out of order—the current is self-regulating.

The generator is permanently connected to the engine—no clutches. Thorough service tests by the car builder prove the reliability of these systems and the good service they give under all conditions.

Last but not least—Real service in the field follows the sale.

Full information on request.

Sold to automobile manufacturers only.

In Record Time the Master "Six

Public opinion has endorsed our own belief in the new Chalmers "Six."

Record Sales prove the New "Six" the most popular of all Chalmers cars. East, West, North and South, this Master car has leaped to instant favor.

We began shipping 1914 cars the last of August. In September we received twice as many orders as we could fill. In October we shipped 1,111 cars—the biggest single month's sales in the history of the Chalmers Company. In November we had more orders on our books for the new "Six" than for any other model we ever built. In December, instead of slowing down for the winter, we are running the big Chalmers factory full force. The country over, Chalmers dealers have been unable to fill ***all*** their orders.

Read What These Owners S

Price Doesn't Indicate Real Value

I did not believe there was a car built at anything like the price that would do what this wonderful "Six" does. All I can say is that everything you claimed for it has been fulfilled in performance—and then some.

It climbed such hills on high as I never believed a car could mount. The motor is practically noiseless. The new one-motion electric starter can be described by only one word, "perfect."

You have brought into my life a factor of enjoyment for which the money I have paid for it does not begin to compensate.

W. L. HARRIS, President
New England Furniture & Carpet Co., Minneapolis, Minn.

Chalmers-Entz Starter Works Perfectly

I wish to express my pleasure and satisfaction in the new 1914 Chalmers "Six" which you recently sold me. I have tried this car out very thoroughly; have been away on several long trips, over bad roads, and have yet to find a cause for complaint. I wish to state my appreciation of the perfect working of your new self-starter. Not once since I have had this car has my chauffeur had to leave his seat to crank up.

To sum up, it is a comfortable, luxurious, and in every way a satisfactory car.

BERNARD LOWENTHAL, President
Acme Lace & Embroidery Co., 100 Fifth Ave., New York.

Equals Highest Priced Cars

The Chalmers Model 24 "Six" you delivered to me October 11 has been in use every day since without trouble.

I have driven several high priced cars, and consider the performance and looks of the new Chalmers as good as any car at four or five thousand dollars.

W. A. CHEATWOOD
1511-1513 E. Main St., Richmond, Va.

Didn't Know He Had Tools

You may be interested in knowing how the Model 24 in which Mrs. Tucker and I left your factory Saturday evening last, has behaved. We encountered rain, mud and heavy sand all the way from Ypsilanti to Terre Haute, Ind., yet reached Mattoon, a distance of almost 500 miles, with no trouble at all. Never had any of the tools out. In fact, I did not know what tools there were. The starter never failed.

Mrs. Tucker drove the car a portion of the time with the greatest ease.

E. B. TUCKER, Secy.
Daily Journal-Gazette, Mattoon, Ill.

Car Itself Better Than Our Claims

The 1914 Chalmers "Six" is, in my opinion, a better car than any other make on the market at the same price.

I bought your Model 24 without a demonstration as I was convinced it was the car I wanted and that it would ride smoothly and easily. I am more than pleased, as it has demonstrated itself beyond my expectations.

J. M. REYNOLDS
300 Chestnut Street, Philadelphia, Pa.

The Best Car for the Price

After driving my new Chalmers "Six" nearly 3000 miles I am even more pleased than when I first received it. As you doubtless know, this mileage has been distributed over not only state highways but also country roads of all kinds through the Adirondacks and Berkshires.

Its hill climbing ability, flexibility and general quietness of operation are particularly commendable. The electric starter and lighting system operate perfectly.

I consider it the best car for the price on the market today.

W. M. DEMING
General Electric Co., Schenectady, N. Y.

New "Six" Motor is Ideal

The new "Six" is the most complete and best all-around designed car that has ever been produced and I am more than pleased with the whole appearance. The motor is ideal. The electric starter is a masterpiece. You have reduced everything to its simplest form.

GEO. B. POOLE, 70 Kilby St., Boston, Mass.

Master "Six"

Master "Six" Features

Non-Stallable Motor
Six Cylinders—All moving parts enclosed
Electric Starter—Silent Entz System
Valves of Chalmers Tungsten Steel

Molded Oval Fenders
Four Forward Speeds
Eleven Foot Wheel Base
Interchangeable Bodies
Electric Driving Lights—High and low power
Left Side Drive—Right Hand Control
Big Tires—36" x 4½". Underslung springs
Concealed Electric Vibrator Horn

x" Has Sold Itself to the Nation

This phenomenal sales record is simply the result of unusual value in the Master "Six."

For the 1914 Chalmers "Six" sells itself.

We have made strong claims for the new "Six"—claims that have caused a sensation in the motor world.

Yet every claim has been proved.

The Chalmers Standard Road Test reveals the Master "Six" through a course of sprouts which can neither hide its defects nor exaggerate its virtues — a trial such as not one owner in a thousand would give his car.

This is the plan by which the Master "Six" has sold itself to the nation.

Here are extracts from a few of the scores of letters we have received from owners of the Master "Six." Read how this great new car is making good wherever motor cars are used. And please feel free to write any Chalmers owner. We rest our case for the new "Six" with the opinions of the people to whom it has sold itself.

ay About the Master "Six"

Prefers Master "Six" to Any Other

My six-cylinder Model 24 has given satisfaction far beyond my expectations.

The pleasure I have had with it is such that I would recommend it to any of my friends who are considering the purchase of an automobile at any price.

DAVIS PEARSON
904 Walnut St., Philadelphia, Pa.

Needs Only One Transmission Speed

The new Chalmers "Six" is designed to meet the wishes of anyone who wants a good car of moderate price and low up-keep. Nearly all people have ideas as to what ought to be in a good machine. I believe that the new "Six" just about fills the bill.

A person who never owned an automobile or drove one, could throw the switch and start the "Six." The improved disc clutch makes it easier to make a good start than a bad one. Not a jerk to it. Some of the speeds seem unnecessary. I have started on any of them, but I suppose that when you are in the mud, sand or water they ought to be used. Its speed capacity is more than I care to monkey with.

F. H. ROBERTSON, Sec. & Treas.
Hartford Western Land Co., Wichita, Kans.

Every Claim Fulfilled

My beautiful Chalmers Car is giving the very best of satisfaction and service. It is all that you represent it to be.

FRED A. MAILANDER, Pres.
The Mailander Co., Waco, Texas.

New "Six" Best Buy on the Market

In the thirty days since I received my Chalmers "Six" it has fulfilled every claim made for it. I have driven it over 1000 miles; I have thoroughly enjoyed every mile of it.

One of the first trips taken was through very heavy roads, but that made no difference. It pulled through 35 miles without my once shifting to a lower gear.

This car in my mind is the handsomest on our streets.

I conscientiously believe that you have in the new "Six" the best automobile "buy" on the market regardless of price. It looks as if your success this season depends merely upon being able to supply cars to fill your orders.

W. E. EGLE, Waterloo, Iowa.

Easy Riding; Strong Pulling

I surely appreciate the ease with which my Chalmers "Six" carries itself over the rough pavements of our city.

The engine is a marvel. Its pulling qualities are simply wonderful. Its ability to throttle down on high speed is something in which the prospective buyer should be more interested than that the machine can run 75 miles an hour on high. The steering gear makes it glide around corners as though it were automatically controlled.

ALFRED B. KOCH
The LaSalle & Koch Co., Toledo, Ohio.

You cannot be sure of getting the best automobile value unless you examine carefully the merits of the Chalmers Master "Six" and make a careful comparison with other cars. We offer you the way to such examination and comparison—The Chalmers Standard Road Test. Any Chalmers dealer will be glad to give you this test at your own convenience. Catalog on request.

Chalmers Motor Company, Detroit

DELCO

ELECTRIC CRANKING LIGHTING IGNITION

A Delco Equipped Car Has Won the World's Greatest Automobile Honors

An American motor car equipped with the Delco Electric Cranking, Lighting and Ignition System has been awarded the famous Dewar Trophy by the Royal Automobile Club of England.

The Delco system itself did not win this highly prized trophy, but it was so severely tested in the trials, and the record it made was so remarkable, that some facts regarding it are bound to be of interest to motor car owners.

The trials that determined the award of the Dewar Trophy involved driving 1,000 miles over all sorts of roads at an average speed of 19.5 miles an hour. *This is somewhat misleading, however, as an exceptionally high rear axle gear ratio was used throughout the trial and the actual speed at which the electric generator was driven was the equivalent of only 13.2 miles per hour with a standard rear axle.*

During the entire trial which lasted 66 hours and 17 minutes, or more than three days and two nights, all electric lights were burned continuously.

Actual driving time, however, was only 51 hours. For over 15 hours all lamps were burned while no current was being generated. The cranking device was used 130 times, an average of once every 30 minutes during the entire 66 hours.

And at the end of the trial the batteries were still sufficiently charged to crank the engine 1,000 compressions and burn the side, tail and speedometer lights 20 additional hours.

In other words, in spite of the heavy and continuous drain on the batteries for over 66 hours, while the generator was being run at unusually low speed for only 51 hours, the battery was still well charged at the end of the trial.

Another very gratifying phrase of the Committee's report is found in the statement that—"IT WAS OBSERVED AND NOTED THAT THE IGNITION WAS PERFECT THROUGHOUT THE TRIAL."

And yet while this entire performance of the Delco equipment is very wonderful, it is not at all surprising to drivers of cars equipped with the Delco Electric System.

More than 75,000 automobile owners are duplicating, day after day, in their own driving the experiences of the Royal Automobile Club Committee.

PERSONAL GLIMPSES

(*Continued from page* 1289)

street paving. The Council awarded these contracts and everything went swimmingly. Cherry liked Atlantic City and concluded to make his home there. He and Kuehnle became warm friends, and in the course of time there appeared in the business world the United Paving Company. Cherry was president and Kuehnle vice-president, with other politicians and office-holders as directors and stockholders.

The United Paving Company was successful from the start and soon had contracts amounting to about $640,000. It was successful in almost every bid. There might be lower bids on occasion, but always the lowest bidders failed to come up to the specifications. Anyway, the United Paving Company got the work.

There could have been no trouble for Kuehnle in all this because he had nothing to do with awarding the contracts and he was never scotched until it came to the Woodstave water-main project. There he fell.

Atlantic City gets its drinking water from artesian wells at Absecon, seven miles over the meadows. For years the water was brought over in small pipes, and it became necessary to install one large main. The United Paving Company did not bid on this project because, according to law, Kuehnle as Water Commissioner could not receive a bid from his own company.

Frank Lockwood, a contractor of New York City, did bid, however. He was not the lowest bidder, but he won because the lowest man did not make out his specifications according to rule. Lockwood got the contract for about $300,000.

On that same day Lockwood suddenly discovered that he could not finance his contract and assigned it to William I. Cherry, who went on with the work, receiving about $70,000 in addition for allowances.

Certain things had been happening in the meantime. A reform element which pooh-poohed the ancient slogan of "Don't sling mud at our town and hurt business" had come along and started a morning newspaper and other trouble. Also Woodrow Wilson had been elected Governor of New Jersey.

The reform element, which did not care what it said, went right out after Kuehnle and his lieutenants, attacked the water-main job as a violation of the law, and turned the light on considerable political history in the county.

No one was particularly disturbed at what the "knockers" were doing in 1910, because "what could they do?" A grand jury had other things to attend to and the community feared revelations. There was no disturbance until one day a blow fell from an unexpected quarter.

The Governor, for good and sufficient reasons, chose Justice Kalisch to preside over the court of Atlantic county, and Justice Kalisch one day discovered that there was another method of obtaining a grand jury than with the aid of the Sheriff.

A grand jury could be chosen by elisors, as they are called in old English common law; that is, by disinterested citizens selected by the court where there is reason to believe that the Sheriff is an interested party.

These elisors, citizens of Atlantic City and from the county who were not members of the dominant machine, went to work and selected a group of business men and Attorney-General Wilson went to work with them.

That grand jury simply took Atlantic City as it came, and before they had finished they had returned a bushel of indictments against about every well-fortified politician in the city. Indictments came out by scores against white and black, big and little, old and young, and among the first was the indictment against Louis Kuehnle himself.

He was charged with violating the law in that he had voted to award the water-main contract to his own company. The roar that went up was strictly partizan, and Governor Wilson was accused of seeking to ruin the Republican party for selfish purposes.

Kuehnle was indicted in 1911 and in December of that year went to trial. Attorney-General Wilson prosecuted and Justice Kalisch presided.

The trial did not last long. It was shown that while the contract was in the name of Lockwood and Cherry, the bookkeepers of the United Paving Company handled all the work, and checks received from the city in pay for the work were deposited to the account of the United Paving Company. Lockwood had been an employee of the company.

Kuehnle was convicted on December 24, and in the following month of January he was sentenced to one year at hard labor and a $1,000 fine.

FROM MESSENGER BOY TO RAILROAD PRESIDENT

ALFRED H. SMITH was not widely known before his promotion to the presidency of the New York Central Railroad system. He is not one of the kind who give out interviews or make after-dinner speeches that are featured on the front pages of all the newspapers from sea to sea. Nor has his name figured in the kind of stock-jobbing deals that cause the reformers to touch off their large-bore artillery. The explanation of his being in the background is that his career has been just one hard day's work after another. Tho good-natured and affable, he is brusk in speech and quick in action, and always a hustler. Mr. Smith is first-rate proof that real self-made men are as much in demand as they were in the days of Benjamin Franklin or Abraham Lincoln. He started at the bottom, as did his immediate predecessor, William C. Brown. He grew up, so to say, in employ of the Lake Shore & Michigan Southern, following in the footsteps of Mr. Brown, who worked his way to distinction in the Lake Shore under William H. Newman. It is said that John Newall, one of the early geniuses of the Lake Shore, left upon it the stamp of his marvelous individuality and strength, and the heritage was handed

(*Continued on page* 1295)

MILDLY SPEAKING

WE'RE a bit proud of a new cigar that we're introducing.

IT'S THE

Wabon Panetela

We're making it in our wonderful new cigar factory—the big, white, show-place of cigardom. Like all **WAITT & BOND** cigars, it is made under the eyes of visitors.

It's a 10 cent cigar made especially for the man who wants **MILDNESS.** It will not suit the man of drugged nerves,—the man who smokes black and oily cigars with a kick in them,—unless he wants to get back to clear brain and steady nerves.

WABON PANETELA is for the temperate smoker. It has all the goodness of the costliest cigar and none of the morning-after nerve jangle.

It has a filler of the choicest long, clear Havana leaf that the best Cuban plantations can grow. Its wrapper is thin, silky Sumatra leaf.

And it's made in the long, slender panetela shape that is growing more and more popular with temperate smokers.

In **WABON PANETELA** we've answered the question, "How can I get real Havana cigars without a mule kick in them?"

We're packing **WABON PANETELAS** in handsome cedar packages just suited to tuck in a corner of your suitcase when you start on a trip, or for the top drawer of your office desk or library table, and ideal for gift purposes. There are 25 cigars in the box.

YOUR box will be sent by mail on receipt of $2.00. If the cigars don't meet your idea of mild, soothing, aromatic excellence after you have smoked five, return the balance and we'll return your $2.00.

It is plain now what the public wanted

Four $1550

A light car of quality — powerful, staunch and fast, yet comfortable — Jeffery built it. We have accomplished in the Jeffery Four and Six that which all motor car designers have either overlooked or striven *for in vain.*

Good mechanics know that the day of the big, lumbering car is gone—the great fuel wasting, giant motors and terrific tire expense.

True, the public has bought and used such cars—in fact, two years have passed without progress toward economy and efficiency. The only changes have been in equipment and body design.

The public waited, and cars just grew heavier and heavier—no better. The majority, in self defense, bought cheap cars—not because they were good, but because they were light and economical. Quality was lacking, of course, and comfort—out of the question.

Then came the Jeffery Four and Six, each dominant in its class. Designed alike and representing the latest foreign and American practice.

The leading American and foreign engineers had forecast such cars for 1916, but Jeffery did not wait. No one thought the new and ultimate type would come quite yet—and at such a price.

They counted without the public. They thought the American people demanded bulk, great size and wasted power. They counted without Jeffery, as the history of four eventful weeks will show.

Early in November the Jeffery Four and Six were announced.

Then came the demand. Telegrams from dealers selling other cars; good offers from big organizations willing to place orders for hundreds of cars. Then thousands of inquiries from prospective buyers and a flood of applications from salesmen wanting jobs.

The result? A five million dollar plant running night and day to produce the goods. But there will be no trouble about deliveries. The thousands that want Jeffery cars can get them because a plant like the Jeffery can produce them.

Now, just what did the public want?

They wanted what we have produced in the Jeffery Four. A high speed, light, mono-bloc motor, 3¾ x 5¼, counted not large in this country where many have been taught to measure horse-power by engine bulk instead of engine speed.

Yet, it is a big fellow when placed side by side with the great majority of the motors shown last month at the Paris show. Fifty-two out of eighty-six cars shown had smaller motors.

The public wanted the latest body—a Rothschild body. Not a streamline body, remember—but two years in advance of the design now used on so many cheaper cars.

The Lancia brought this design to the Paris show when streamline was popular and it caught the crowd. Rothschild took it to New York and Jeffery introduced it to the American public.

You know the rest. You've heard it talked on the streets—the highest grade car in its class in America.

The specifications tell the story

U. S. L. starting and lighting, without chains, gears or belts. Imported annular ball bearings. Speed it up to forty miles an hour, shut off your engine and coast half a mile.

Spicer universal joints, combination force feed and splash oiling system; four forward speed transmission — the lightest and easiest to operate.

High grade full floating type rear axle on imported annular ball bearings—a delight to the mechanic. Flexible leather coupling between clutch and transmission.

Vanadium steel in springs, rear axle drive shafts and front axle.

Rayfield carburetor; left drive and center control. Pressure feed gasoline tank; pump operated through cam shaft. Bosch Duplex ignition. Solar lamps with dimmer, operated by four position switch.

The Jeffery Four equipment includes Neverleek top, rain-vision windshield, Stewart-Warner speedometer, ammeter, extra demountable rim, with carrier; electrically lighted dash replete with latest attachments. Klaxet horn and complete tool equipment.

Do you want the book?

The Jeffery is a car that will delight the mechanic who takes pride in high grade materials and efficient design.

We have a booklet which will interest the mechanic or the layman. It's an unusual story, revealing some facts about motor cars that any mechanic might tell you in confidence.

Clip the coupon below and get the book.

The Thomas B. Jeffery Company

PERSONAL GLIMPSES

(*Continued from page* 1293)

down through Newman and Brown to Smith. The new president was for some time vice-president and general manager of the entire New York Central system, and is regarded as being well qualified for his new position. He is forty-nine and equipped with a strong physique. Here is his autobiography as told to a reporter for the New York *Evening World:*

I don't like to talk about myself. But my experience is that there is only one thing to do with a newspaper man and that is to tell him what he wants to know. Sooner or later he will find it out anyway, and you can usually avoid lots of trouble by telling him the whole story at once.

I started out to make my own way in the world when I was fourteen. My father had died and had left my mother with five children. We all worked. There were no drones in the hive.

As a little fellow I had always liked the railroads. They had a fascination for me. So after I had gone through the grammar school and had taken part of a high-school course, I thought I was ripe for a business career.

I obtained employment as a messenger boy in the Lake Shore offices in Cleveland at a salary of $18 per month. I tried to make myself useful and gradually picked up the routine of the stationery department until I was made an assistant clerk in that department.

From the stationery department I went to the purchasing agent's department, and there I ground out a routine for four years. I would meet the same salesmen month in and month out—a sort of mechanical existence that galled me. I couldn't see anything for me in the future in this department. I seemed to be up against a dead wall, so I resigned to take a fresh start.

I had not lost my love for railroading. I looked over the field and determined that the proper way to begin was in the mechanical or operating branch. I went to work in a construction gang on the Lake Shore.

And here let me say that a man's work must be congenial to him; he must love his task or there is a poor prospect of success for him in that branch. If his work isn't congenial, if he doesn't feel that he can put his whole soul into it, he will not be rendering the best service to his employer.

I took my turn at the sledge with the rest of the construction gang and lived about the same kind of life they did. But I kept in mind all the time that I must do the best I could for my employers. After four years' work in various gangs I was made a foreman of a construction gang at Adrian, Mich.

I was then twenty-two years old and —I got married. It is never a mistake for a young man to get married. A good woman will steady him and oftentimes give him an incentive to hustle when work is irksome.

I suppose the railroad people saw something in me, altho I was not making any stage plays for advancement, for in

Electric Trucks Give Long Service

RELIABILITY is the keynote of Electric Vehicle design and construction. Note these facts: There are several Electric Trucks of 1899 model still running. F. A. Poth & Sons Brewery, in Philadelphia, is using daily an Electric Truck delivered 11 years ago.

Several of the Electric Trucks operated by the New York Edison Company have been in use 10 years. An Electric has been used by Frederick Loeser & Co., Brooklyn, for 11 years; another by Stern Brothers, of New York City, for 9 years. Three of the Electric Vehicle fleet of Tiffany & Co. were delivered early in 1901.

Three of the Electric Trucks owned by Arnold, Constable & Co., New York City, were purchased in 1903, and an Electric built for B. Altman & Co., in 1898, is regularly used.

All of these first users have since rebought frequently. You really should investigate Electric Trucks *now.*

1890 I was made superintendent of the Kalamazoo division in Michigan. I was then twenty-six years old. This was the smallest road in the Lake Shore system, and some people have called it the kindergarten—a schooling for railroading possibilities. I thought it was a pretty big thing.

Then they made me superintendent of other divisions, and finally in 1901 I was appointed General Superintendent of the Lake Shore with headquarters in Cleveland. From there I was brought to New York in 1902 in the New York Central.

I have had only one maxim. Summed up briefly, it was "Do the best you can." My advice to a young man, if you think I am competent to give any, is this: Make yourself invaluable to your employer; study his interests in every particular; apply yourself to your task to the best of your ability, and your merit is bound to be recognized.

The great trouble with young men is that they get in a rut—get mechanical. A man to be valuable to his employer must have ideas. He must be able to think beyond the rules of the office or the precedents and be able to show that he has taken into his heart the solving successfully of the business problem with which he is associated.

So many young men are content to draw a fairly good salary—they have so much for expenses, so much for pleasure—and they work day in and day out as machines. The work is not even congenial, and they work in the face of the positive knowledge that there is no advancement for them.

THE HERO OF CULEBRA

FROM an engineer's viewpoint at least, no higher tribute could be paid to the memory of Lieut.-Col. David Du Bose Gaillard, who died recently as an indirect result of overwork while in charge of the work on the Culebra cut division of the Panama Canal, than that of Col. William M. Black, of the Army Corps of Engineers, who remarked to a newspaper reporter that Gaillard "laid out his plans in such a way that he got the maximum out of everything." Colonel Gaillard was generally recognized as one of the three or four most heroic figures in the story of the great work of digging the Canal, and the Culebra cut will serve as a fitting monument to his record of achievement. His career is sketched briefly by the Washington *Star:*

When Culebra cut was flooded by the blasting of Gamboa dike, October 10, Colonel Gaillard lay unconscious in his bed at the hospital in Baltimore.

Colonel Gaillard's work on the Culebra cut will always be regarded by the world as stupendous, and yet Colonel Gaillard performed his duties as quietly and as clear-sightedly as tho engaged upon a mere trifle of every-day engineering. When the treacherous clay, sliding upon slippery soapstone, intruded itself upon the work, making it necessary to remove hundreds

(*Continued on page* 1321)

THE advertising columns of The Digest now give the investor news of investment offerings almost as quickly as the daily papers. The change made in The Digest in September, giving a weekly insertion of editorial matter on Investments and Finance, affords the advertiser an opportunity to schedule copy for these pages and to reach quickly the investing public throughout the country. Many attractive bond issues are decided upon and sold within two or three weeks, so that this service fills a real need.

May we repeat in this announcement a statement that we have frequently made to Digest readers:

"The investment of money is a banker's business."

We say frankly that we have not the facilities for answering technical questions relating to investment offerings. They involve points which only experts in each branch of investment could answer satisfactorily.

We would point out to our readers that as publishers we protect them from unreliable investments, investigating the firms advertising with us and in many cases investigating each separate offering. We can not, however, undertake to advise them on the disposition of their funds, because this is essentially the business of a well equipped banking house.

Many financial houses maintain special bureaus of information and advice for prospective investors. A small investor will receive exactly the same service as the large investor.

If you seek advice or enlightenment on investments, you should write to a reputable banker.

When we ourselves have money to invest we consult a banker, and this is our suggestion to you.

NOTE.—In the advertising columns of a few magazines you will find the announcements of reputable financial houses. Many that do not advertise are equally good. We refer you in this issue to pages 1298 to 1306.

Hand Fire Extinguishers on Automobiles

Pyrene Mamufacturing Co.,

1358 Broadway, New York, N.Y.

Gentlemen:- As it has always been our belief that the use of a handy and practical fire extinguisher would considerably reduce automobile fire losses, we have been pleased to accede to your request to investigate the Pyrene Hand Fire Extinguisher; and, as the result of our investigation and experiment, we are glad to be able to endorse the approval extended to the Pyrene Hand Fire Extinguisher by the National Board of Fire Underwriters as being a ready and effective means of extinguishing automobile fires.

We are therefore announcing that we are now prepared to make an adequate discount from our Automobile Insurance Premiums for automobiles suitably equipped with a Pyrene Hand Fire Extinguisher (one quart capacity, pump type, approved by the National Board of Fire Underwriters) properly affixed to the automobile in a Pyrene Vehicle Bracket.

Yours truly,

Secretary.

INVESTMENTS AND FINANCE

FUNDAMENTAL CONDITIONS GOOD

THOMAS GIBSON contributes to *Moody's Magazine* a reassuring article on fundamental conditions in the financial world. His conclusion is that no reason exists in statistics for the present low level of prices for railway and industrial shares. He believes the question is "one of political apprehension," and that as soon as this is cleared up, there will be "a very great and sudden change in the attitude of people toward good securities." Liquidation has already been so thorough and so much timid money lies on deposit awaiting investment that "there is very little danger of any marked decline from the present level." In connection with this conclusion, he presents a series of interesting statistical statements as follows:

"The percentage of loans to deposits, specie to loans and reserves, on Saturday, November 29, compared with the preceding week, and the corresponding weeks for five years, are given below.

Date	*To deposits*	*To loans*	*Reserves*
Nov. 29, 1913...	101.37	19.76	25.60
Nov. 22, 1913...	100.42	20.74	26.35
Nov. 30, 1912...	102.21	18.76	25.24
Dec. 2, 1911...	100.06	19.51	25.91
Dec. 3, 1910...	103.28	19.18	25.44
Dec. 4, 1909...	100.63	19.64	25.20

"The average rate of return on money invested in 10 representative dividend-paying railroad stocks at the prices which obtained on Saturday, November 29, compared with the return at the close of the preceding week and at the close of the corresponding weeks for the last five years follows:

Date	*Return on money*	*4 mons. money*	*Call mon (average)*
Nov. 29, 1913...	5.96%	4¾%	4¾%
Nov. 22, 1913...	6.01	4¾	3¾
Nov. 30, 1912...	5.18	6	8½
Dec. 2, 1911...	5.35	4½	3¾
Dec. 3, 1910...	5.40	4½	2½
Dec. 4, 1909...	4.76	4¾	5

"Return on money is very large and rates for both time and call funds are about right.

"Bank clearings for week ending November 29:

Week ending	*New York*	*Outside N. Y.*	*Total U. S.*
Nov. 29, 1913..	$1,251,858,068	$1,619,270,738	$2,871,128,806
Nov. 22, 1913..	1,848,911,872	1,571,588,145	3,419,700,117
Nov. 30, 1912..	2,015,377,697	1,559,702,513	3,575,080,210
Dec. 2, 1911..	1,819,279,401	1,364,342,163	3,182,621,560
Dec. 3, 1910..	1,547,838,251	1,143,978,638	2,691,816,919
Dec. 4, 1909..	2,320,888,914	1,414,948,510	3,735,837,424

"Attention has been called numerous times to the importance of considering clearings outside of New York as representative of general business, while the big New York City clearings are seriously affected by a falling off in stock and bond sales. I find, however, that there is a rather loose habit on the part of many of our writers and commentators to refer only to the total clearings without discrimination or distinction. So viewed, there is every appearance of a sharp recession in business, but the entire loss appears in New York. The bank clearings are not of much use as barometers unless the information afforded by them is properly employed.

"Last week we handled on the New York Stock Exchange the almost unprecedentedly small amount of 522,300 shares as against 1,060,600 shares in the corresponding week in 1912 and 2,165,400 shares in the corresponding week of 1911. As this dulness is reflected in bonds, in private transactions, and in outside exchanges, it is easy to see that the effect upon clearings is great, and that it has not a considerable reference to general mercantile business. There is no doubt some recession in certain lines of trade, but no good evidence of the big contraction which many people are claiming without producing a scintilla of evidence of any such contraction.

"The average prices of 23 active rails, 18 active industrials, and the two combined at the close, November 29, together with five-year comparisons, follow:

Date	*23 rails*	*18 ind.*	*41 R. & I.*
Nov. 29, 1913...	80.87	59.96	70.41
Nov. 22, 1913...	80.62	60.22	70.42
Nov. 30, 1912...	97.87	75.06	84.46
Dec. 2, 1911...	96.11	66.56	81.33
Dec. 3, 1910...	93.24	67.45	80.34
Dec. 4, 1909...	108.03	83.96	95.99

ECONOMY SUPERSEDING EXTRAVAGANCE

It is asserted by a writer in *The Wall Street Journal* that the disastrous habit of living up to or living beyond incomes, so prominent in this country during the past decade or more, "has already brought back habits of thrift to a great number of people." While incomes may not yet have been impaired, the business reaction has inspired in many a fear that incomes might be reduced. Hence "people far and wide have begun to economize." Already has this been felt by merchants in the holiday trade. Bankers, however, "consider it the best change for the better that can be noted." Altho a hard lesson to learn and follow, the experience of human nature teaches that it "can only be inculcated in the great majority by periodic hard times." One significant sign of the extent to which people have been living beyond their means is afforded by statistics of borrowings from life insurance companies. Early in December these were reported to have reached $550,000,000. Just what the limit to borrowings on insurance policies may be is not stated, but it is evident from these figures that "the limit has been approached more closely than ever before."

Students of conditions still assert that a very considerable part of the recent unwarranted extravagance of Americans was the purchase and operation of automobiles, a form of extravagance which belongs in a class with the extravagances which exhaust capital. Motoring "drives away old habits of thrift and frugality." The writer believes this pastime has "greatly accelerated the business reaction," and has "impelled a multitude of persons to live beyond their incomes," so that they now are "left without savings to tide them over a period of backward business." The writer says further of the influence of the motor-car:

"No section of the country has resisted its lure. North, south, east, and west, it has drawn money that purchasers could ill afford to spend, and it has been one of the most costly extravagances for the reason that the second-hand automobile is hard to

sell. It has not the market value of jewelry, the great extravagance of other days. In bad times it comes close to being economic loss, for it is next to impossible to realize on it except at a great sacrifice. Holders can only economize by laying up their machines and saving the expense of maintenance and operation. They can not take them to the banks, as they could jewelry, and borrow against them. So it happens that in the current period of business depression thousands of people have invested savings in such a way that they can get very little of them back."

GOVERNMENT OWNERSHIP OF RAILROADS

A reader of *Investments* (now edited and controlled by Franklin Escher) said he would like to buy some standard rails now selling below par, but was "afraid to do so because of all this talk about Government ownership." He added that if there was any chance of the Government taking over the railroads, he for one "did not wish to hold any railway securities." In his dilemma he sought advice from the editor as to the likelihood of Government ownership, and received the following reply:

"Government ownership is, in our opinion, a remote contingency. There is a good deal of talk about it at the present time—there always is, especially when there has been a change in the Administration. Twenty years ago they were talking about the Government taking over the railroads just as they are to-day, but we haven't noticed that it has as yet been done. There are a lot of people in the country who think it would be a good thing, but the intelligent class of citizens who have looked into the question realized the difficulties and dangers of such a proposition. The man who has traveled abroad where the Government runs the railroads is in no hurry to have the same sort of thing prevail here. He realizes the inevitable lowering of the standard of efficiency which takes place when private gives way to public ownership, and is quite willing that money should be made out of the railroad business provided that he gets good service. And it is just because this opinion is so deep-rooted in the public mind that it is our idea, that, in spite of the talk that is going the rounds and the pessimistic utterances of some of the railroad presidents, it will be a long, long time before Government ownership in this country becomes an accomplished fact.

"That, however, you say, is only your opinion. Suppose you are wrong about it, and that, as Mr. Mudge and Mr. Ripley predict, the Government is bound to take over the railroads in the not distant future? In that case, where will I be if I hold their stocks?

"Surely, it is only an opinion, but even if that opinion is wrong we do not see why the man who holds the right kind of railroad securities will have anything to worry him. Five or six years ago when good dividend-paying stocks were selling up close to 200 and some of them were quoted at even more than that, the taking over by the Government of the railroads would have been a disastrous proposition from a stock-market standpoint. The investor, however, doesn't have to be told that to-day it is entirely different—that these good stocks now selling at par or slightly below are an entirely different proposition than they were five or six years ago, when they were selling pretty nearly twice as high. If the Government were to-morrow to take over such roads as Southern Pacific, Atchison, New York Central, or, in fact, pretty much any of the standard dividend-

For January Investment

$1,500,000 Kaufmann Department Store First Mortgage 6% Bonds

Unconditionally guaranteed by Kaufmann Department Stores, Inc., the largest Retail Merchandise Establishment in Pittsburgh, Pa., with net earnings, calendar year, $816,061.26

Denominations, $100, $500, $1,000 and $5,000

We call the attention of all who have funds available for January investment to this offering. We have purchased these bonds after careful investigation, and recommend them in the strongest terms as a safe and profitable investment for the following principal reasons:

1. The high financial standing and great earning power of the guarantor corporation insure prompt payment of principal and interest.

2. The business conducted by the Kaufmann Department Stores was founded in 1871 and has grown from a small beginning to the largest enterprise of this character in Pittsburgh, with the highest credit rating. Its floor space has increased from 800 square feet to 700,000 square feet, and the number of its employes from 4 to 4,000.

3. The total quick assets of the Company were shown by an independent audit to be almost $3,000,000.

4. The net annual earnings of the last calendar year were more than nine times the greatest annual interest charge.

5. The bonds mature serially, $150,000 each year, from 1916 to 1925. We thus are able to offer investors bonds coming due in three to twelve years as they may desire. Bonds amounting to $250,000 of the final maturities have been sold to officers and directors of Kaufmann Department Stores, Inc.

Kaufmann Department Stores Building (shown completed) occupying the entire block bounded by 5th Ave., Smithfield St., Diamond St. and Cherry Way, in the heart of Pittsburgh. The 5th Ave. and Smithfield St. corner is considered the best retail corner in this city.

We recommend the bonds as a safe and exceptionally attractive investment. The value of our recommendation is best shown by the fact that no investor has ever lost a dollar of principal or interest since this house was founded in 1882.

Reservations may be made for January delivery. Call or write for Investment Circular No. 546A.

payers, do not think that those holding these shares at anywhere near the present level would have much to worry about."

NEW HAVEN STOCK HELD BY INSURANCE COMPANIES

Among railroad stocks rated in past years by insurance companies as good for their investments was New York, New Haven & Hartford. It is believed, however, that some of these companies reduced, or completely closed out, their holdings at the time, one or two years back, when the road was making clear its difficulties in paying the 8 per cent. dividend. Just how matters stand now with many of these companies is set forth in an article printed by *The Wall Street Journal*. Companies doing business in New York State show a book value for their holdings of this stock of $12,642,000, the market value at the present time being about $5,600,000 and the dividend formerly paid on this stock $680,000. The heavy loss the companies now face is distributed among forty-six of them. Of life-insurance companies, however, it is to be said that the only New York State life company that still holds New Haven shares is the Mutual. Following in detail is information on this subject compiled by the same newspaper:

"Because of the Armstrong law, passed in 1906, as result of the Hughes investigation, which recommended the life-insurance companies to sell all holdings of stocks within a specified time, there is only one New York State company still holding New Haven stock. This is the Mutual Life, which has $3,564,000 par value of the stock.

"The following table gives the insurance companies holding New Haven stock listed in the 1913 report of the Superintendent of Insurance of New York State, the par value, the book value, and the market value at 68. Authorities at the office of the Superintendent of Insurance say that the holdings in New Haven stock have not been materially reduced since the filing of the last reports.

LIFE-INSURANCE COMPANIES OF NEW YORK STATE

FOREIGN COMPANIES

	Par value	*Book value*	*Market value*
Commercial Union	$55,000	$83,790	$37,400
Munich	16,800	21,000	11,424
Total	$71,800	$104,790	$48,824
Misc. companies	21,500	30,344	14,620
Grand total	$8,505,400	$12,641,993	$5,783,672

"Of the foregoing companies, twenty-eight are located in the New England States, where the New York, New Haven & Hartford Railroad operates.

"Since the tabulation of these figures, the New Haven stock has gone to 65⅝, a new low record. At this figure the 85,054 shares would be worth $5,600,000.

"All of the stock held by the insurance companies was bought at a premium, except that held by the Equitable Fire and the New Hampshire Fire, which was secured at par."

"BABY" BONDS

Much work in publicity remains yet to be done by bankers, investment houses, and financial periodicals before the public will understand how easy it now is to invest small sums of money in bonds. An example of this is afforded in a recent letter to *The Wall Street Journal*, in which a lawyer, or broker, wrote to ask for a list of such bonds in denominations of $500, saying the Southern Pacific collateral 4s were the only bonds of that denomination that he was able to discover. In reply the editor prints a list of more than twenty $500 bonds, and another list nearly as long of $100 bonds. He says the number of bonds of both classes is increasing, "due to a catering to the small investor," even of bonds in denominations of $100. New issues now frequently include $100 bonds. The lists printed in reply to this correspondent are described as containing "bonds listed on the New York Stock Exchange, which enjoy a fairly active market." The last sale and bid price are given, and the amount of the yield at those prices, as follows:

$100 Bonds	*Last sale or bid price*	*Yield P.C.*

DECLINE IN BUILDING OPERATIONS

Among features of the present decline in business frequently commented on is the decline in building operations. While Boston and Philadelphia report gains, New York and Chicago show declines. A compilation of returns from the leading cities of the country—94 in all—shows, for November of this year, a decline of 26 per cent. compared with November last year. The loss in New York was 64 per cent., in Chicago 15; the gain in Boston 6 per cent., in Philadelphia 4. Rochester lost 33 per cent., Syracuse 53, Buffalo 30, St. Paul 42, Duluth 48.

These statistics were collected by *Construction News*. Meanwhile *Bradstreet's* has a similar compilation, but it extends over more cities—133. The total expenditure in these cities for November was $49,734,000; last year the total was $60,705,000, or a percentage in decline of 28.8. Seventy-eight of the 133 cities showed declines for November, while 56 showed increases. *Bradstreet's* presents a detailed comparison of expenditures at these 133 cities for November and October this year and for November, 1912, from which the following are taken:

Cities	Nov., 1913	I. or D. from Nov., 1912		Oct., 1913
Akron, Ohio	$173,135	D.	56.4	$463,425
Albany, N. Y.	277,855	D.	37.4	781,965
Atlanta, Ga.	266,724	D.	78.4	338,315

Income Tax Chart

We have prepared in pamphlet form a reference chart enabling the person interested to ascertain at a glance the following information concerning the income tax.

1.—The amount of income subject to normal tax.
2.—The amount of income subject to graduated surtax.
3.—The exact amount in round numbers of tax imposed upon a given income.
4.—The exact percentage of the imposed tax to the income.

A typical example of the proper method of using the chart is also shown, together with instructive comment regarding taxable and non-taxable securities.

A copy of this Income Tax Chart will be sent upon request with our general circular. The circular contains a comprehensive list of high grade investment bonds whereon the issuing companies have agreed to pay the normal tax.

INTEREST RATES

What rate of interest does your money earn? Make a comparison with the following returns:

Principal	Annual Income
$100	$4.50 to $5.00
500	22.50 " 25.00
1000	45.00 " 60.00
3000	145.00 " 180.00
5000	250.00 " 300.00

These liberal returns are now to be obtained on conservative investment bonds, and are due primarily to the present world-wide demand for loanable funds.

Ask us to send Circular 1302, "Diversified Investments."

PUBLIC AUCTION SALE

Consolidated Light & Power Company and Chippewa Construction Company

The Power Company is an operating Company, doing business in Michigan at Alma, Shepherd, Mt. Pleasant, Rosebush, Clare, Coleman and Gladwin. Its power is generated by one Hydro-Electric and one Auxiliary Steam Plant at Mt. Pleasant, and one Hydro-Electric and one Auxiliary Steam Plant at Clare, and is transmitted over about eighty miles of high tension lines.

The Construction Company was organized for the purpose of building certain properties for the Power Company. Its assets consist of certain local distribution systems, material, dam sites, partly constructed power house and certain interests in the Gas and Electric Companies at Greenville, Michigan. The assets of both Companies will be offered for sale at public auction

Tuesday, January 13, 1914

At the Congress Street Entrance to the Wayne County Building, at Detroit.

The hour of sale for the Power Company is 12 o'clock noon, and for the Construction Company 2 o'clock in the afternoon.

For terms of sale and further information about the property, apply to

DETROIT TRUST COMPANY, Receiver
Penobscot Building DETROIT, MICHIGAN

HONEST COMPARISONS TO CONVINCE MUDDLED BUYERS

THE Chandler Light Weight Six at $1785 is the first car ever offered to the public in a way that *demands actual comparison* with *all* other cars—point by point—and *gives you the means to secure such comparison.*

The Chandler Car represents a so much greater standard of automobile value that it is in itself a sensation. And the new method here enployed to demonstrate comparative automobile values places automobile buying on a really scientific basis and proves absolutely our confidence in the Chandler Six.

We *want* the honest comparisons and we give you the way to secure them because we *know* this will sell Chandler Cars. If we were not certain of superiority we would try to sell this car in the usual way—with whirlwind advertising, high-sounding claims or expensive pictures.

"THE PROOF SHEET"

Sent on Request

shows you the way to eliminate much of the "bunk" that has been a part of automobile selling. The man who starts out to buy an automobile in the usual way gets so much miscellaneous information—so much general "talk"—and hears so much carefully arranged selling argument and so many subtle "knocks" that he becomes confused by claims and counter claims and forgets them all. But with *The Proof Sheet* filled out and proved up he has before him in tabulated form *all* the *vital* points that *show* which car he should *really* buy among all those he is considering. He can make his selection (no matter how great the range of prices) with absolute accuracy.

Weight (fully equipped) 2879 lbs.

CHANDLER $1785

Light Weight Six **Built By Men Who Know**

Not Only a Six You Can Afford to Buy— But a Six You Can Afford to Run—

You can get equally light weight in other cars for less money, but you cannot get Chandler power, flexibility and quality. You can pay more than $1785 but you cannot get light weight and Chandler economy of upkeep.

The Chandler Six is probably the lightest car of its size and power ever built—yet just as strong and sturdy as a car can be. No other five-passenger car at any price offers so many high-class features in design and construction nor such complete and high-grade equipment. Points which are featured in the advertising of other cars at all sorts of prices are mere details of Chandler construction and equipment.

The builders of the Chandler have been building world-famous sixes for many years. Thus in the Chandler car you pay no extra price for costly errors and expensive experiments, but you secure all the unquestioned advantages of the six, with all the economy of the most economical fours—you get a motor that is unequalled *in any car at any price* and which is without vibration at any running speed—built in our own factory—and cannot be found in any other car.

The car itself is big, sturdy, luxurious and graceful. It runs from 3 to 55 miles per hour without shifting a gear and is one of the best hill climbers ever built. It rides comfortably and safely over bad roads because of proper weight distribution and spring suspension. Yet because of its light weight and remarkably efficient motor it is daily averaging over 16 miles on one gallon of gasoline and you will get hundreds of extra miles out of every set of tires.

IMPORTANT Compare the Chandler Car point by point with all others as regards the following: What Drive and Control? *The Chandler has Left Side Drive and Center Control.* What Lighting and Starting? *Westinghouse Separate Systems of Electric Lighting and Starting in the Chandler.* What Wheel-Base? *The Chandler has 120 inches.* Has it *Silent Chain* or Spur Gears? *The Chandler has imported Coventry Chains.* Has it *Quick Adjustable Storm Curtains? The Chandler has genuine Jiffy Curtains.* Has it the best make of *Demountable Rims? The Chandler has Firestone Demountable Rims.* Is the *Motor* and *Entire Power Plant Mud-Proof* (without ugly splash pans beneath)? Is the *Valve Mechanism enclosed?* Are *Entire Oiling Mechanism* and *Oil Pipes Enclosed in Motor? You get all these advantages in the Chandler.* Is the *Clutch Multiple Disc* or Cone? *The Chandler is Multiple Disc—Discs of Raybestos and Steel.*

How about the *Bearings* in the Transmission and Rear Axle? *The Chandler has F. & S. Imported Annular Ball Bearings*—not roller bearings. What make *Carburetor? Stromberg in the Chandler. Magneto? Bosch.* What *Cooler? Mayo Genuine Mercedes type Honeycomb Radiator on Chandler.* What *Electric Lighting System? Chandler has the Westinghouse.* What *Speedometer? We use the Jones.* Is the *Gasoline Tank* in front or *in the rear out of danger? On the Chandler it is in the rear.* Has the Gasoline Tank ample capacity—say 20 *gallons? It has on the Chandler.* And about *Road Clearance? The Chandler has 10 1-2 inches.* Do you get an *8-day Clock, Solar Lamps,* and all other accessories that make for comfort and service? *You do with the Chandler.*

Is the car *simple* to operate and keep in good running order and is everything *easily get-at-able? This is true of the Chandler.*

Complete Proof Sheet Sent Free

All the above—and other details which should determine your choice of an automobile—are covered by our large complete Proof Sheet, which we will gladly mail to you on request. If you want to buy wisely instead of blindly don't buy without writing for a copy and having it filled in and proved up.

GERMANY'S INDUSTRIAL GROWTH

That Germany in late years has made perhaps greater industrial progress than any other European country long since passed into general popular belief. Just what this means in actual figures of trade and manufacturing has recently been set forth in a letter from a Berlin correspondent of the New York *Times Annalist*, who says this progress, during the past twenty-five years, "has continually astonished even the observer who has lived

(Continued on page 1305)

Don't Accept a Substitute for Champion Priming Plugs

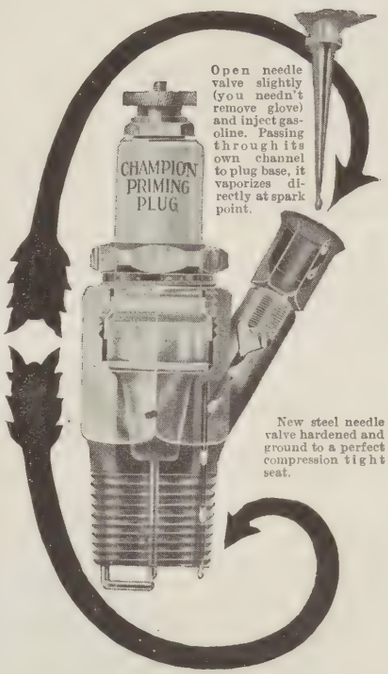
Champion Priming Plugs start any motor in any weather, on the first quarter turn.

Last winter thousands of users were delighted to find that they cut out the mean part of cold weather motoring.

Thousands more who wanted them were disappointed, because we could not keep up with the flood of orders.

This season's demand for them began long before the first snow fell.

They put the few drops of gasoline needed for starting right where you want them—then fire them with a hot, fat "*Champion*" spark.



Open needle valve slightly (you needn't remove glove) and inject gasoline. Passing through its own channel to plug base, it vaporizes directly at spark point.
CHAMPION PRIMING PLUG
New steel needle valve hardened and ground to a perfect compression tight seat.

Don't accept an imitation. See that the word "*Champion*" is on the porcelain.

This is the only priming plug in which gasoline flows down a separate channel in the plug's shell, thus obviating sooting-up and danger of breaking the porcelain.

Sold everywhere at $1.25 each. If not at your dealer's, send us $5 for four *Champion Priming Plugs*—prepaid and guaranteed.

FREE—with each set of four *Champion Priming Plugs* we give a handsome nickeled wrench fitting the plug, bushing and needle valve.

Disregard coupon if you want the special size for motorcycles, but give name and year of motorcycle.

A Safe Investment in the Heart of Chicago

Having disposed of the first portion $750,000, (total issue $2,250,000), we now offer balance, $1,500,000, for immediate subscription.

FIRST MORTGAGE GOLD BONDS 6%

Secured by Chas. A. Stevens & Bros.

New Stevens Building, Land and Leasehold

$500—*Denominations*—$1000

Maturing 3 to 15 years. Interest payable January 1st and July 1st.

Greenbaum Sons Bank & Trust Company, Chicago, Trustee

SECURITY

Ownership of Land—1,800 sq. feet in the very heart of Chicago, for which the company paid $525,000. Considered the most valuable real estate in Chicago.

Ownership of Leasehold Estate—18,060 sq. feet adjoining the above mentioned land. This long-term leasehold, having been secured several years ago, has an enormous value based on recent transactions, recognized as the very choicest estate in this great center of progress and enterprise.

Ownership of New Building—Fronting 92 feet on State Street and 48 feet on Wabash Avenue, an entire block in depth. Chas. A. Stevens & Bros. will occupy the first six stories and double basement, the remaining thirteen floors are finished into attractive specialty shops.

SITUATED ON STATE STREET

extending over and under Holden Court to Wabash Ave., between Madison and Washington Sts. Frontages and entrances on two leading thoroughfares. New, mammoth nineteen story and double basement, fireproof, steel and terra cotta duplex structure, with ground area of 19,860 sq. feet. This massive department store, specialty shop and office building will be one of Chicago's architectural splendors. The new, substantial edifice is supported by concrete caissons resting on bed rock. A beautiful arcade extends through the entire building, penetrating the busiest retail shopping center in the world.

Additional Security

All leases are assigned to the trustee for protection of bondholders and rents deposited to provide for payment of interest and principal. Provision has also been made by the owners to pay $240,000 per annum for space which they occupy. Estimated rental 180,000 sq. feet of specialty shops $360,000. In addition to the above mentioned security this bond is the direct obligation of Chas. A. Stevens & Bros., whose capital stock is $4,500,000.

QUALITY FIRST

IT takes twelve weeks for the painting of a Detroit Electric body—a long time and a thorough process. But only thus can we be sure of the perfect Detroit Electric finish, which retains its lustre for years through sun and rain and snow.

To upholster a Detroit Electric takes days of the most careful work by a corps of skilled craftsmen. The result is Detroit Electric comfort; like riding in a finely appointed yacht on a summer sea.

From the engineer's drawing board to the final inspection "quality first" is the watchword of every department in the Detroit Electric factory.

Because we have put quality first in building our cars, in choosing our selling representatives and in maintaining our service to owners, Detroit Electric cars sell two for one over any other electric car.

For 1914 the Detroit Electric offers you the widest choice both in body types and mechanical features. Note the prices:

Victoria	$2300	Gentlemen's Roadster . .	$2500
4-Pass. Brougham, Rear Seat Drive	2550	4-Pass. Brougham, Rear Seat Drive	2850
5-Pass. Brougham, Front Seat Drive	2800	5-Pass. Brougham, Detroit Duplex Drive . .	3000

(Prices f.o.b. Detroit)

Send for our beautiful new catalog. Our cars are now on exhibition in the principal cities—and at the leading automobile shows.

INVESTMENT AND FINANCE

(*Continued from page* 1303)

in Germany and witnessed its development from year to year." He bases his letter on a composite picture which has just been produced by Dr. Carl Helfferich, a director of the Deutsche Bank, and is about to appear in book form. Germany in twenty years has doubled her agricultural efficiency, her industries have increased even faster, and she has been saving $2,380,000,000 a year. Following are items in this correspondent's letter:

"Yet Helfferich's statistics, based upon the official reports, show that the yield per acre of wheat, rye, oats, barley, potatoes, and hay has increased 77.7 per cent. in twenty-five years; and the aggregate yield of these crops increased 87.7 per cent., notwithstanding an increase of only 5.8 per cent. in their acreage. In all these crops Germany is getting a larger yield per acre than any other of the large agricultural countries. At the same time Germany has increased its production of beet sugar about two-and-one-half fold. These remarkable results in agriculture appear all the more striking when one remembers that the number of persons engaged in agriculture has remained practically stationary during the period in question, whereas the percentage of the population subsisting from agriculture dropt from 42 per cent. in 1882 to 28.5 per cent. in 1907.

"In industrial production, of course, results have been for the most part still more remarkable. The coal production of the country—including lignite—rose from 76,200,000 tons in 1887 to 259,400,000 tons in 1912. The gain of 240 per cent. is without a parallel in any other country except the United States. At the same time the German production of iron ores has increased threefold, while the excess of iron ore exports of more than 700,000 tons for 1887 was converted by 1912 into an excess of imports by nearly 10,000,000 tons. During the same period pig-iron production rose from 4,024,000 to 17,853,000 tons. From 1886 to 1910 Germany increased its steel production 1,335 per cent., the United States 910 per cent., and England 154 per cent.

"Production statistics are not at hand for the other industries, but the increase in the number of employees and in steam power in a few of them gives an idea of their rapid development. In the machinery industry the number of persons employed increased 229 per cent. from 1882 till 1907, and more than 100 per cent. was recorded in mining and smelting, earths and stone, chemicals, paper, printing, and building. Still more remarkable was the gain in steam power, for which the statistics cover only the twelve years 1895–1907. In that brief period only four industries—textiles, woodworkings, foods and beverages, and printing—failed to increase their power more than 100 per cent., while the building trade gained 308 and machinery 557 per cent., and other industries between 100 and 200 per cent. This wholly leaves out of account the great increase in electrical energy.

"From 1890 to 1910 Germany increased its railway mileage 42.6 per cent., against 44.6 for the United States and much smaller figures for England and France. From 1885 to 1911 the freight movement on the railways increased in ton-miles nearly 273 per cent., the passenger traffic 377 per cent. Germany's commercial marine made a gain in steam tonnage from 470,000 net register tons in 1888 to 2,655,000 tons in 1913. From 1887 to 1912 Germany's import trade rose from $740,000,000 to $2,610,000,000, while exports rose from $747,000,000 to $2,156,000,000. In the same years Germany's total foreign trade gained 214.7 per cent., as compared with 173.3 for the United States, 113.1 for Great Britain, and 98.1 for France.

"The effect of all this increased activity in agriculture, manufacturing, and trade is reflected in the rapid growth in the aggregate income of the German people. This total income Helfferich estimates now at not less than $9,525,000,000, or probably somewhat more. For the year 1896 his estimate is only $5,120,000,000. Hence there has been an average yearly gain of $275,000,000 during the past sixteen years. As compared with the above estimate of the annual income of the German people, Leroy-Beaulieu estimated the income of the French people five years ago at $5,000,000,000; and Chiozza Money several years ago made an estimate of $8,310,000,000 for the English people. Thus the income of the German people amounts to a considerably greater total than that of those two rich countries.

"Taking up the subject of aggregate national wealth Helfferich applies two methods of calculation, one based on the assessments for the property tax in Prussia and several of the other States, and the other on the volume of property insured against fire in Germany. The totals recorded in both cases, of course, had to be corrected by making additions for property escaping taxation or not covered by insurance; and these additions appear to have been made in a very conservative spirit. According to the former method he arrives at an aggregate national wealth of $68,000,000,000; while the total reached by the latter method was nearly $80,000,000,000. He assumes a mean of about $75,000,000,000 for the national wealth.

"The growth of the national wealth—*i.e.*, the savings of the people, together with the created and the natural increment in the value of property—is placed at an average of between $1,430,000,000 and $1,670,000,000 during the past fifteen years; and in the most recent years the growth has even risen to $2,380,000,000 a year. Fifteen years ago the yearly accretion was hardly half so great."

BUYING RAILWAY EQUIPMENT

Statistics compiled by *The Wall Street Journal* show that the railroads "are still out of the market for equipment." A belief exists that, when buying does set in the orders will be "much smaller than in 1912." What rail-buying there has been this season "was conducted on a very conservative scale." One manufacturer is referred to as having said that "not in twenty years has he witnessed such a dearth of railway orders." Following are further interesting items in this article in connection with present conditions in the industry:

"In normal years many of the big railroads of the country would have had their rail orders placed early in the autumn, but this year, so far, some of the important transportation companies have not considered the subject. Among others, the Pennsylvania Railroad usually announces its orders by October or November, and has done so as early as September in some years, but it has as yet taken no such action in 1913.

"To realize the value of the rail business to the steel companies, it is but necessary to recall that this class of tonnage frequently runs above 3,000,000 tons, which, at a base price of $28 per ton, represents a very large volume of gross earnings for the

BACK TO NATURE

BY NEWTON NEWKIRK

No funnier bit of typical American humor has ever been written than this convulsing tale of two amateur sportsmen who go "back to nature" on a hunting and fishing trip. It is a rare bit of refreshing and spontaneous humor enlivened by illustrations made by Newkirk himself, in a style of drawing that is as original and entertaining as his literary method.

Thomas W. Lawson says it is: "Body-shaking, lung-tearing, side-splitting. . . . I hystericked, rolled over the library rug, and in my awful gleeful contortions nearly rolled into the open grate."

"I think your book splendid. . . . You have a spontaneous style that is admirable," says Walt Mason.

"I sat last night and read your book and laughed and laffed and larfed and guffawed and got up and yelled from pure joy. It is my idea of an unflawed gem."—George Fitch.

manufacturers as well as providing them with business which is relied on each year to keep the plants active.

"While the rail production last year was above the 3,000,000-ton mark, the apparent consumption was not, there having been 446,473 tons exported; which suggests that the railroads let down a little in rail replacements. The following table gives the total production and approximate consumption of all kinds of rails in the last 12 years, in tons:

Year	Produc.	Consump
1912	3,237,915	2,885,222
1911	2,822,790	2,405,330
1910	3,636,031	3,290,712
1909	3,023,845	2,725,847
1908	1,921,015	1,726,224
1907	3,633,654	3,298,500
1906	3,977,887	3,654,794
1905	3,375,929	3,098,184
1904	2,284,711	1,906,237
1903	2,992,477	3,057,195
1902	2,947,933	2,943,789
1901	2,874,639	2,557,580

"The above table shows that there has been no great increase in rail consumption over the last twelve years. As an example, consumption in this country in 1901 was 2,557,580 tons, compared with 2,885,222 tons in 1912. As far back as 1903 the country consumed more than 3,000,000 tons of steel rails. The improvement in the quality of the rails has had a great deal to do with increasing its life; also, the fact that much heavier rails are now being used. One manufacturer says that over the last several years the small amount of new construction has been a factor in keeping down rail consumption. It is estimated that if forced to do so, the rail mills of the country could turn out 6,000,000 tons in a single year, compared with the record output of 3,977,887 tons in 1906."

BETTER ECONOMIC CONDITIONS IN SPAIN

A general impression exists among observing people that Spain since her war with this country in 1898 has improved her economic condition. Statistics, in fact, go to show that, in many directions, this is true. It appears also that much larger sums are being spent each year for public education. It remains true, however, that Spain, with an area nearly as large as France, and an industrious and vigorous peasantry, now has about one-seventh the foreign trade and about half the population of France. The foreign trade of Spain, in fact, is only slightly greater than that of Sweden, a country with far smaller natural advantages.

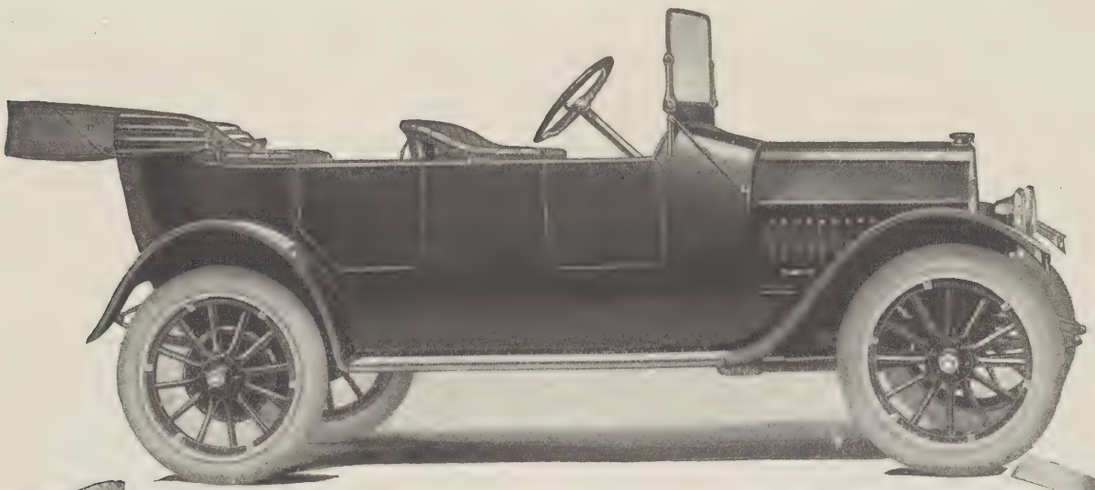
Valuable information as to present conditions in Spain has been obtained in London from British consuls at Madrid, Barcelona, and Bilboa, and is used as the basis of an interesting article on the internal affairs of the country printed recently in *The Economist*, of London. Of all centers Barcelona shows the greatest prosperity. Should her present progress be continued for twenty years more, it is believed by the consul there that "it will not only be the most populous, most important, and wealthiest city on the Mediterranean, but it will become, after the great capitals, one of the most important cities in Europe, vying as a commercial and industrial center with towns like Hamburg and Antwerp." Following are other interesting items compiled by *The Economist* from this and other consular reports.

"The most rapid way of getting to Buenos Aires from any place in Europe—even London—is by taking ship at Barcelona, and the Spanish and Italian boats from the port are large and good. The town exports more than seven million tons of cotton goods yearly, and the steady increase in the imports of raw cotton and coal testifies to the prosperity of the industry. The Barcelona report, of course, includes the most flourishing portion of Spain. The chief towns are Valencia, with 215,000 inhabitants, which is a most important fruit-producing center and a busy port; Zaragoza, with a population of over 100,000, with considerable and increasing manufactures; Alicante, a town of 50,000 inhabitants, which produces great quantities of wine and almonds; Palma, of 68,000 inhabitants, producing almonds and olives; and several small manufacturing towns. Manufactures are widely spread; for example, the little island of Minorca yearly exports several hundred tons of boots and shoes.

"Spain, however, can not be said to be in a satisfactory economic condition as long as the enormous drain of emigration continues. In 1912 the emigrants numbered 194,443, as against 158,377 in 1910. These figures, moreover, do not represent the full loss of Spain, for it is certain that great numbers sail from Marseilles and other neighboring ports; indeed, it is surmised that 70,000 left by Gibraltar alone. The main causes of this phenomenon are stated to be (1) the demand for labor in Argentina, which has absorbed nearly all the extra emigrants this year, owing to the abundant harvest coinciding with the temporary prohibition of Italian emigration to Argentina, and (2) the drain on the Italian male population caused by the war between Italy and Turkey. The emigrants to Argentina numbered 147,640 and to Cuba 29,386; the emigration to Brazil, Uruguay, and Mexico was much smaller, and only a thousand went to the United States. The great proportion of these were from the northwest of Spain, from Galicia and Asturia, and they are men whom the country can least afford to lose—sturdy, hard-working peasants of an unadventurous, home-loving character, who would not emigrate if their condition was supportable at home. It is noteworthy that the comparatively small ports of Vigo and Coruña embarked two and three times as many emigrants as the huge port of Barcelona in prosperous Catalonia.

"Spain's most valuable produce is mineral. Iron, copper, and lead are exported in very large quantities, while a considerable amount of coal is produced for home consumption. The wine industry is, of course, on a great scale; the area under vines is 3,149,000 acres. Far more Spanish wine is sent to France than to England. Cotton goods are largely exported, chiefly to Latin America. Spain does not export grain, and, in fact, receives a considerable amount of wheat from Russia; but she exports a great quantity of foodstuffs—oranges, almonds, onions, sardines, raisins, nuts, and vegetables. The bulk of these articles go to England.

"The country undoubtedly needs a better and more intelligent government. The introduction of modern methods of agriculture and communication, and an improvement in education, would bring about better conditions, and a system of lighter and more equitable taxation and a less centralized form of government are also desirable. Politicians are lacking in public spirit, and the management of affairs is almost entirely in the hands of the executive; the deputies are puppets in its hands, and are without the training necessary to enable them to take an efficient part in public affairs and to frame an intelligent budget. The people are simple and temperate in their habits, and this rich country ought to have no difficulty in supporting its small population in contentment."



Quality in Cars

Satisfaction to Owners is the Foundation of Jackson Success

Eleven years ago the foundation of Jackson success was built on the rocks of high quality and satisfaction.

For 1914 the three new Jackson models herald the biggest values and the biggest success in the eleven years of Jackson growth.

In every inch of their big, comfortable, beautiful bodies, in every part of their long, sturdy chasses, in every detail of their powerful, quiet-running motors, these 1914 models are backed up by eleven years of Jackson experience.

1914 Leader—"Olympic Forty" $1385

This is the model that has taken the heart out of competition. It has created more comment than any other announced for 1914. We do not believe any other car in its price class, or up to fifteen hundred dollars, can compete with the "Olympic Forty" at $1385 in the possession of the most essential elements of a motor car. Others may equal it in specifications, but specifications alone are not so important. Car quality goes further back than mere length of wheel-base or size of tires or bore and stroke of motor.

The chassis of the "Olympic Forty" has 115-inch wheel-base—plus—the right distribution of weight that makes for a balanced, easy-riding car.

It has good materials throughout—plus—the selection of the right kind of metal for the special duty it performs.

It has a big, powerful motor—plus—quiet and freedom from vibration.

It has a roomy, comfortably upholstered body—plus—full elliptic spring suspension both front and rear, with a degree of riding luxury as near to perfection as any road vehicle has ever attained. It has a body of beauty and grace—plus—the strength and dependability of high grade lumber dried in our own kilns.

It has a beautiful finish—plus—nineteen distinct paint shop operations of the good old-fashioned kind. That means painting and rubbing down, painting and rubbing—giving a finish that is as lasting as it is beautiful.

It has full equipment—plus—full electric cranking system, full electric lighting, electric horn, gasoline gauge on dash, extra rim.

It has dependability—plus—for there isn't a rivet in the car, from the radiator cap to the tail light, that isn't fitted with the certainty that comes of building the same product for eleven years and building it on honor.

It has serviceability—plus—the record of eleven years of satisfaction-giving reputation in the hands of thousands of owners in every part of the civilized world.

That is the foundation of Jackson superiority—in its record of service and dependability for eleven years. And for 1914 Jackson cars are better than ever. The "Olympic Forty" at $1385 leaves competition way behind.

The Jackson "Majestic Four" at $1885 is a leader in the standard two-thousand dollar class. There is no handsomer "Four" on the market for 1914. There isn't a better "Four," nor one in which you feel greater assurance of ample power, generous safety of construction, comfort in riding and beauty in finish.

The "Sultanic Six" at $2150 has proved to the motoring world that a Six-Cylinder car possessing every quality and luxury known to motoring, backed by a manufacturer with a known and honored reputation, can be bought for a reasonably moderate price. Wheel-base, 132 inches. Seven-passenger model, wheel-base 138 inches, $2300.

Write for catalog to Factory at Jackson or see your local dealer.

JACKSON AUTOMOBILE COMPANY, 1318 E. Main Street, Jackson, Michigan

CADILLAC ENCLOSED CARS

We do not think it will be possible for you to suggest to yourself any sense in which the beauty and luxury of Cadillac Enclosed Cars could be heightened.

The appointments are rich and dignified. They are executed with a quiet good taste which envelopes mind and body in complete content.

In the rich, soft upholstering, the superb, velvety riding qualities, the quiet, powerful, smooth running engine, the dependable Cadillac Delco electrical cranking device, the electric lights, together with the infinite care manifested in perfecting every minute detail, a degree of luxury is attained which leaves nothing more to be desired—nothing more to be obtained.

They are every day becoming more and more the choice of those discriminating buyers to whom price is not a consideration, but who prefer the Cadillac because they find in it all of those attributes which make for constant and enduring service and complete satisfaction in the highest sense.

The line of enclosed cars comprise three types as follows: Seven passenger Standard Limousine at $3250, Five passenger Inside Drive Limousine at $2800, Three passenger Landaulet Coupe at $2500, all completely equipped. Prices are f. o. b. Detroit.

MOTOR-CARS AND MOTOR-TRUCKS

(*Continued from page* 1281)

preparing to enter the American market in a large way, find themselves with a new price condition to face. Some of them will go forward uninterruptedly with their plans, while others, whose plans were less advanced, are reconsidering the situation before undertaking the creation of any extensive selling organization."

Interesting in connection with this reduction is the annual report of one of the largest makers having a factory at Akron. It appears that its great business, for the fiscal year ending October 31, amounted to $32,500,000 as against $25,232,000 in the previous year. Net earnings, however, in excess of $2,000,000 did not equal the net for the previous year, which were about $3,000,000. Among the causes of this decline in net were reductions in tire prices, a strike among rubber-workers, and the spring floods in Ohio. The net, however, was sufficiently large to permit the company to add a large sum to its surplus, the total assets now standing at $18,885,000, or an increase of $5,040,037. The balance-sheet for the fiscal year showing increases over last year has been printed as follows:

Assets	1913	Increase
Real estate and buildings	$3,493,536	*$362,033
Machinery and fixtures	2,857,714	2,857,714

* Decrease.

MORE CARS USED HERE THAN IN EUROPE

It has long been generally known that in this country are in use more motor-cars than in any other in the world. It appears, however, that, not only is this true, but the number used here is greater than the number used in all European countries combined. An estimate referred to by *The Wall Street Journal* places the number used in England and on the Continent at 250,000, whereas the number used here is believed to be at least 1,000,000. That European makers should continue to dread further increase in the American invasion is not surprizing, in view of all these facts, which mean cheaper and much quicker production here than in Europe. Already they are confronted with the fact that exports of cars from this country have increased in five years about $26,000,000. Commenting on this matter, a writer in *The Wall Street Journal* says:

"England, for instance, the largest of the foreign producers, turns out only about 20,000 cars a year; whereas over here, one concern, the Ford, reports having made and sold 185,000 during the season closed about a month ago. The output for all American concerns has been estimated at 400,000 for the 1913 season.

"Germany, in 1911, produced about 17,087 cars; in 1910, 13,113; and in 1909, 9,444. Italy is credited with having manufactured 7,305 in 1912, and 4,665 in 1911, most of which were made by the Fiat Co. Russia, which turned out 100 machines last year, 65 in 1911, and 13 in 1910, imports about $5,000,000 worth annually.

"Probably in all Europe there are not over 250,000 autos in use, as against more than 1,000,000 in the United States. The figures are incomplete, but France, according to consular reports, had 28,641 motor-cycles in use on January 1 last, most of which came from England, that style of machine having become popular because of the side-car attachment. Germany, at the beginning of the year, had 57,464 autos in use, including the number in government, taxicab, and omnibus service. According to the Consul at Frankfort-on-the-Main, the competition of the American auto is not yet apparent in Germany. The manufacturers of that country have done their best to create a sentiment against American-made cars, and many prospective buyers are afraid of their alleged flimsiness. In 1912, the German tire producers exported about $8,300,000 worth of tires.

"Denmark has about 8,000 machines in service, about one-third of which are of American make. Portugal, with a population of 6,000,000, has only some 2,000 cars, and most of these are of French manufacture.

"Foreign makers have not yet adopted quantity production, and they can not see how the immense output here is going to be absorbed locally, year after year. The fact that our exports have increased from $5,277,847 in 1908 to $31,253,533 in the 1913 fiscal year would appear to furnish some basis for their fears."

TRUCKS HELP CLEVELAND OUT

As with Dayton last spring, so with Cleveland in the recent sudden snow-storm, causing distress in that city—trucks helped people out of their dilemma. The snow-bound city really suffered for want of supplies; indeed, famine was at one time threatened. Food was distributed to centers by means of commercial vehicles. Details of the suffering and relief are given by a correspondent of *The Commercial Vehicle:*

"The storm appeared in Cleveland on Sunday, and by Sunday night practically all rail traffic was at a standstill. Interurban cars were stalled in some cases miles from the nearest station, and many of the passengers were forced to take their choice of tramping through blinding sleet and shoulder-high drifts to near-by farms, or to stay in the unheated car.

"Wires and poles were blown down everywhere, and by Monday morning Cleveland was entirely cut off from outside communication except by wireless. This condition continued until Tuesday. Hundreds were forced to stay in Cleveland for two, and in some cases three, days, because of the tie-up on the railways, some of which were not operated at all on Monday. Travelers arriving in Cleveland Monday, Tuesday, and Wednesday were forced to sleep in the lobbies of hotels, in barber chairs, theaters, and on the tables of restaurants.

"By Tuesday the supply of milk was exhausted, except for what could be brought in on the few interurban lines then running. This was carefully distributed to a few depots, and sold only to families with babies. The severe driftage of snow on the tracks, and its blinding glare, which rendered semaphores invisible, and the danger at grade crossings, caused the railroad to fail until the storm had ceased and the tracks could be cleared.

"In the meantime men on horseback had been sent to dairy-farms to instruct the farmers to haul the milk in on sledges to a central point outside the limits of the city, at which point the motor-trucks took the treasured fluid into the waiting city. Local house-to-house delivery was practically unknown for two days, the trucks of both wholesalers and retailers combining to distribute food to the larger of the neighborhood stores, from which the customers were obliged to carry it home in baskets. The condition of the streets was such that passenger motor-cars were used only in the central districts. Horse wagons were hauled with four- and six-horse teams with light loads, motor-trucks alone running through the drifts as in normal times.

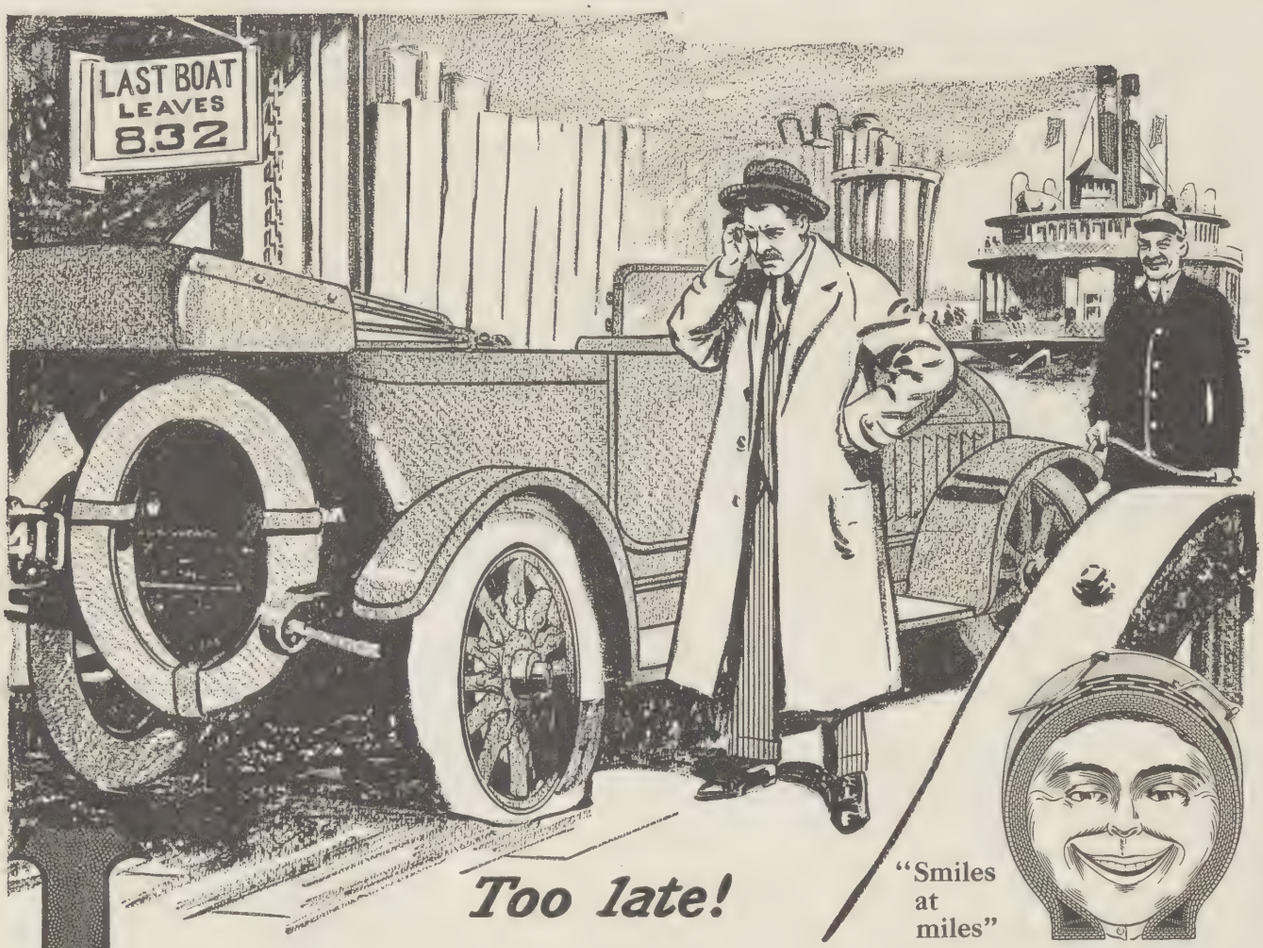
"One of the greatest dangers to which the city was made subject was the fire hazard. The alarm system was put out of commission, telephones all over the city were cut off, fire-hydrants were covered with drifts and well frozen, and only the principal thoroughfares were negotiable. Fortunately equipment with more staying power than that afforded by horse-flesh was available. Five tractors were employed constantly in reaching isolated fires."

THE ECONOMIC SIDE OF THE LINCOLN HIGHWAY

Rollin W. Hutchinson, Jr., a mechanical engineer who is well known as an authority on motor-truck transportation, recently prepared an interesting article on the importance of the Lincoln Highway as "an economic force in road commerce." He pointed out that at present the cost of moving farm products is one of the greatest burdens agriculture has to bear, and some relief from this burden could be secured by better roads and the use of motor-trucks. When the Lincoln Highway is constructed, the line will be of extra value to users of auto-trucks in handling farm products and merchandise. Mr. Hutchinson believes that the Lincoln Highway would prove to be of far more importance to farmers and to tradesmen and manufacturers than to users of it for pleasure purposes. The following are interesting passages from his paper:

"In 1912, the United States produced thirteen and one-half billion dollars' worth of farm products. Of this immense amount of farm products, the railroads probably carried three or four billion tons; horse vehicles transported perhaps three or four times this tonnage. In other words, the highway commerce of the United States, represented by 2,250,000 miles of all kinds of public roadways, transported three or four times the tonnage of the 250,000 miles of railways. Vast, therefore, as is the economical transportation of agricultural products to the railways from points where rails have not, and for many years to come will not be laid, the fullest advantages which rail transportation can give to commerce are not enjoyed in the United States to-day because the common carriers can not secure the tonnage which they can handle so much more cheaply than any other internal transportation agency.

(*Continued on page* 1311)



Are you a success?
What is your time worth?

Can you afford to gamble with punctures—missing important engagements; losing by one such occurrence the cost of puncture-proof insurance for a year?

Play safe! Only one-fifth of a cent a mile has protected others. It will protect *you* against punctures and lost time—against the high expense for inner tubes that punctures invariably cause.

Lee Puncture Proof Pneumatic Tires

must prove absolutely puncture-proof—or you get back every cent you paid for puncture insurance.

Back of that statement stands an absolute guarantee.

Shall we send a copy of the guarantee, and pamphlet "L," with full details on construction and owners' reports of service?

Stop taking chances! Write today for this free booklet.

LEE TIRE & RUBBER CO.
Conshohocken, Pa.

Sold in every leading city

Simply look up "Lee Tires" in your telephone book

Note this construction

Not a troublesome outside cover to kill resiliency—not an inner case to be attached.

3200 steel discs imbedded in a cushion directly under the tread.

Each disc good for a smile—and for more than a mile.

Every disc a guarantee against puncture.

Discs overlapped without touching. Imbedded in rubber—free from all danger of heating or tearing loose.

Made like all Lee Tires, of the finest rubber and best fabric on the market. Cured by latest perfected process which most factories use for but a portion of their product.

Is it any wonder that such letters as this are frequent?

"I find that I have up to the present time bought ten Lee Puncture-Proof Tires for use on my cars. This may serve to show my interest in them. I am very enthusiastic on the subject of the Lee Puncture-Proof Tires, because I have not only obtained mileage exceeding their guarantee, but I have enjoyed a freedom from punctures and blow-outs that is as novel as it is pleasing. Some time ago I removed from one of these tires a long wire nail that had penetrated the tread until stopped by the steel discs, after which the nail was bent double, but without puncturing the tube or injuring the tread in any appreciable degree."

(Name on request.)

MOTOR-CARS AND MOTOR-TRUCKS

(*Continued from page* 1309)

"It would be difficult to calculate how much of the tonnage represented in farm products goes to waste in the United States every year because of the impossibility of getting it in the hands of the common carriers for transportation to the consumer. True, railroads radiate into every section of the United States, but due to lack of sufficient volume of traffic in undeveloped territory, there are millions of square miles of farm country now inaccessible to the railways. This farming territory is not developed because there is no way to get its products in the hands of the common carriers. It does not pay railroads to lay rails to points even where there is an aggregate large tonnage, but so widely scattered that the cost of conveying it will not to-day pay an adequate return upon their investment in trackage to these points.

"The only effective and economical way for the solution of the distribution problems of commerce—distribution being used in the larger sense of transportation, which is the most important factor—is the improvement of highways, and the improvement of highways as a whole must have its inception in the same way in which railroad development first began—namely, the building of great trunk lines to which branch or tributary roads feed. This is the large idea back of the Lincoln Memorial Highway, which is now on the map as the first to be consummated Transcontinental Highway artery.

"In planning the Lincoln Highway, its promoters had in mind this important fact, that no great national roadway could be constructed without inaugurating a great movement for the building of better roads—not only in the States which it traverses, but also in adjoining States. The Lincoln Highway will therefore give a country-wide incentive to good roads which all the agencies that have tended to promote good roads for the last ten years can not equal. It is believed that the practical advantages which the public will be quick to recognize in accruing from the Lincoln Highway will be the greatest possible incentive to the building of permanent good roads in two-thirds of the States of the Union. And the building of permanent good tributary roads to the Lincoln Memorial Highway will mean that what is now impractical—the mechanical transportation of merchandise and farm products over internal roadways—will become practical. If farmers, for example, could get their products to the best marketing points 200 or 300 miles distant in mechanical vehicles in two or three days or less, one of the biggest economic problems will have been solved. At the present day, the expense of moving farm products is one of the greatest burdens upon the agricultural population.

"Permanent highways feeding to the Lincoln Highway will enable the practical employment of motor-trucks in large units and operating on schedules to reach out into the tremendously wealthy country within a five-hundred-mile radius in either direction of the Lincoln Highway, and make available for the maintenance of a greater population the potential resources of the country, which are not half utilized, due to the abominable roads in these communities. In France and England to-day, there are motor-transportation companies which operate over territories of 200 or 300 miles, actually competing with the railways for short-haul freight and even for moderate distance freight transportation. The splendid highways in these countries have made motor transportation practicable, and have actually made it cheaper for the shipper to transport his goods in motor-trucks than over railways."

ELECTRIC MOTOR-TRUCKS

In order to determine how general has become the use of motor-trucks propelled by electricity, *The Commercial Vehicle* has sought by letter information from users of them throughout the country. The result is declared to show "some very unexpected and encouraging facts." Nineteen correspondents were heard from. These were using a total of 1,240 electric trucks. It is stated that these firms were "picked at random from a list of motor-truck users in some of the larger centers." The firms report using at the same time 407 horses, but most firms reported no horses. A brewery had 300, a gas company 35, and an electric company 70. Otherwise the nineteen reported no horses. Among the comments made by the same paper on its figures are these:

"It seems strange that such a far-away country as the Philippine Islands, a country that is regarded by many residents of the United States in the same way that many Europeans a few years ago regarded the United States themselves, should take so many electric commercial vehicles. The Department of Public Instruction, Bureau of Supply, however, finds the service of these vehicles an invaluable one.

"The Denver Gas & Electric Co. writes that its twenty-four trucks are of nearly all types and makes in order that a practical and concrete idea of what each truck will do under working conditions may be obtained. The present horse equipment consists of thirty-five horses, comprizing two two-horse teams and thirty-one single-horse wagons. The horses are being replaced by electric trucks in proportion to the usual substitution when their age or physical disability demands a change. No horses have been purchased in the past four years. This company maintains an electric-vehicle department, owns and operates its own garage and employs a high-class battery man. The electric vehicles are used by linemen in line construction; in the electric department for setting meters, changing burnt-out lamps, line repairs, troublemen, and street arc trimmers, and in the gas department for hauling gas appliances to be set in consumers' residences, setting meters, troublemen, and for freight drayage from the depot to the warehouse, from the warehouse to the salesroom, stations, and gas-works, and also in the delivery of coke.

"Concerning its electric vehicles, the Rochester Railway & Light Co. states that the sixty-four it has in use have displaced sixty horses. When horses were used, sixty-four being in service, a large amount of cartage for this company was done by contracting companies. Great satisfaction is felt with the new arrangement, however, the company doing all its own carting and saving considerable money. In the last six months of 1912, the carting bills were reduced by $12,000.

"The *Evening News* Association states that as the circulation of its newspapers increases it will doubtless be necessary to add more motor-vehicles. Horses are totally inadequate for this service, one of whose prime requisites is speed. The machines cover the entire city of Detroit three times each day, once in the morning and twice in the afternoon. The total mileage of the electric vehicles during 1912 was 105,283 miles."

A Good Bookcase for the price of a good book!

This Combination: 3 Sections, glass doors, top, and base, (SOLID OAK) $7.75 ON APPROVAL

Lundstrom

IT GROWS WITH YOUR LIBRARY

SECTIONAL BOOKCASE

Our new "Universal Style" combines a pleasing, enduring design, with latest practical improvements in construction. Adapted for home or office library; beautifully finished in SOLID OAK with **non-binding, disappearing glass doors**, at $1.75 per section; top and base, $1.25 each. The greatest value we have ever offered. On orders amounting to $10.00 and over **we pay freight**; slight extra charge to extreme Western States. Other styles and grades at correspondingly low prices. Lundstrom Bookcases are **endorsed by over fifty thousand users.** Sold only **direct** from our factory at a **considerable saving** to you. Write for our new catalog No. 23.

The Independent

The Forward-Looking Weekly Magazine

Since The Independent appeared in its new form, with its broadened editorial appeal, the public has had an opportunity to see what the publishers meant when they said in announcing their policy:

"The Independent will, in its new form, be the *forward-looking* weekly magazine — its face to the future, its articles and pictures dealing with the affairs of *today* and *tomorrow*, its topics those in which the new generation is vitally interested."

The Editors are concerned with live issues, with new achievements. ***They are anticipating this week what you are going to be thinking about next week.***

OUR INTERNATIONAL FUTURE

William Howard Taft

Ex-President of the United States, will contribute to early issues of The Independent a series of four articles dealing with the Monroe Doctrine and other great national problems which must be solved by the United States in the near future.

WHAT'S AHEAD FOR BUSINESS?

Beginning with the issue of December 25, The Independent will publish a series of articles in which leading men who know financial, manufacturing, and merchandising conditions from the inside will tell us what in their opinion the year 1914 holds in store for business.

Tear here and see for yourself if The Independent is not "good company."

THE INDEPENDENT
119 West Fortieth Street, New York

LIGHT CARS TO CARRY PARCELS

While the cycle-car movement is being watched with some intentness by makers of pleasure automobiles, the production of a small motor-cycle type of vehicle for use in delivering parcels has awakened corresponding interest among makers of commercial trucks. It is being seen with increasing clearness that if the horse as a truck animal must eventually go, giving way to the motor vehicle, there will be some pressing need for an auto-truck of a kind that can be purchased for approximately the same price as a horse outfit. That need seems in some degree to be met by the motor-cycle truck with three wheels. A writer in *The Commercial Vehicle*, commenting on this subject, says:

"It is a certainty that the corner grocer, operating on a limited capital and compelled to use cheap help, can not afford the large investment needed in a 1,000-pound delivery wagon, which requires a real man to properly run. Then, what will the corner merchant do? He can cling to the horse, but that is not advancing the motor field. If there is a possible field for selling such a machine, then there should be a machine to fill the niche.

"London and many of the European cities have demonstrated that there is a very big field for such types of machines in a hundred or more lines of industrial activity, and that these little vehicles are able to make much better headway through the traffic than larger cars, and that their cost of upkeep in proportion to the work they do is lower than that possible with messenger boys riding on the trams, or work done by horse vehicles.

"These little machines are not costly to purchase, and their maintenance cost is relatively low. Their speeds are limited, which without doubt accounts for the lower maintenance costs, than were possible with the same type of vehicle in America, where the high speeds proved the graveyard of not a few installations. It is absurd to give the speed of the railroad locomotive to little delivery cars of this nature. It is not necessary to equip them with the fleetness of the railroad in order to make them an economic investment to the small-city merchant. This additional speed will unquestionably kill the very object for which the vehicles were created, namely, a cheap form of motor delivery.

"Such a type of machine can often be housed more cheaply than horses, and in cities of 25,000 or less the merchant can, not infrequently, garage them in connection with his store, suitable outbuilding for this work often being found in connection with the corner grocery. If there has to be an expensive garage bill with each of these little machines, then their real field is being curtailed. A vehicle to satisfactorily fill the niche outlined must but be elementary in the sense that its lubrication must be simplicity itself, the parts should be well protected, and everything made as non-adjustable and fool-proof as possible.

"It is not a wide span of the imagination to see the days when these little vehicles will be in quite general use, so general, in fact, that even small cities will have one or two street-repair men, who will make it a business to give attention to such machines, and respond to telephone calls for assistance from any one of two score or a hundred users of such machines. Such a traveling city repairman would be able to give each vehicle any attention that it might need once a week or once in two weeks, in order to keep it running in good shape, at a most nominal cost. The necessity for a non-technical driver would then be

(*Continued on page* 1315)

"Safety First!"

Saved by Good Brakes!

(*Lined With 100% Perfect Thermoid*)

At "Death Crossing" YOU can *trust* Thermoid Brake Lining . . . . . Brakes you cannot rely on —utterly—are a constant menace. Every little emergency becomes a danger. Big, real perils, when brakes betray you, mean destruction of life or limb. If you would guard *yours* well, insist on Thermoid. It is 100% Perfect Brake Lining.

Brake lining, to be 100%, should be brake lining *all through*. Not merely on the outside. Then, it is *still* brake lining as long as any of it remains. Dependable to the last.

Break open a strip of ordinary brake lining. Now *cut* open some Thermoid. You can't break it. It is too *compressed*. It must be cut.

You will *see* the looseness of the inside of ordinary woven brake lining. That it is stringy, straggling. That, when the outside is worn off, its braking power is gone.

Without friction, brake lining is useless. In emergency—demanding reliable brakes—it will fail you.

You will find Thermoid the same inside and out. Line your brakes with it. It has the most uniform gripping power. Use it till worn paper-thin. The gripping power remains the same. It is like the friend you can trust.

Not affected by heat, oil, water, gasoline or dirt

Thermoid HYDRAULIC COMPRESSED Brake Lining—100%

Thermoid is constructed of pure Canadian asbestos. The world offers no equal. This is first interwoven and reinforced with solid brass wire. At a glance, this process would seem to make it woven solid. Yet this process is outdone.

Under giant heated rolls the interwoven asbestos and brass is *impregnated* with a wondrous, secret friction compound. These heavy rolls force the compound clear through every pore of the asbestos body. Then it is compressed and cured on hydraulic presses for one hour at intense heat — under 2000 lbs. pressure.

The result is Thermoid—a single, solid substance—instead of the separate several.

This hydraulic compression is the reason for Thermoid's being brake lining *all through*. It explains why its density is fixed—unvarying. Why it cannot be burned out nor destroyed by any heat generated in service. Why it cannot be affected by oil, water, gasoline, dirt. Why its wearing life is greater. Why it has a seven years' record of success. Why it is used on more high-grade cars than all other linings combined. (And the automobile manufacturer *knows*.)

Thermoid contains *fifty per cent more in actual material*, size for size, than ordinary woven brake lining — because of the hydraulic compression — because that much more material is compressed, forced, crushed into every square inch of it. A comparative test of weight will show you that.

Sixty per cent more labor is required to make this 100% perfect lining. It means seven operations—as against three.

We *could* do away with the extra material—the extra labor—the four extra operations—and still offer you as good brake lining as the ordinary. Such a product we probably could sell cheaper.

But it wouldn't be Thermoid.

If you are an automobile owner, when you have your brakes relined pay yourself dividends in wear, value and dependability by insisting on Thermoid. When you buy a new car demand it.

If you are a supply dealer or garage owner, you will please your customers by giving them the extra value in Thermoid. Your jobber can supply you.

Our Guarantee: Thermoid will make good—or *we* will.

Say Good-by to your chains
when you use the "Columb" tread

Russian engineers first worked out the counter-cross or reverse herringbone pattern *theoretically*, as a tread which *could not skid*. Then it was tried out practically on the steppes of Russia, over the smooth roads of England, in the mountains of Switzerland and Spain.

It was used on every type of car and under the severest conditions imaginable. *It worked; it would not skid.* It is one of the features which quickly made known throughout the world the name of the

PRO-WOD-NIK
Columb Tread Non-Skid Tires

Pro-wod-nik Tires are quality tires, built on the principle that "the best is the safest and the cheapest" in everything pertaining to the running of a car. On the Continent and in Great Britain they are known to and preferred by every owner of a high grade car.

Pro-wod-nik Tires have a resiliency greater than that of any American tire. Every ply of fabric used in their construction is impregnated, by a special process, with pure Para, which gives the core the same elasticity as the tread. A layer of pure rubber compound between each ply of fabric binds the fabric together and further increases the *universal resiliency* of the tire. The side walls are of exceptional thickness and the construction of the bead is such that rim-cuts are unknown in Pro-wod-nik Tires.

Write for Booklet

Whatever make or grade of car you operate, you cannot afford not to know about Pro-wod-nik Tires. For safety and low mileage cost you will find them unequalled. Write for booklet and learn all about them.

MOTOR-CARS AND MOTOR-TRUCKS

(*Continued from page* 1311)

answered; and the buyer of such a vehicle would feel that he has not anything more to do than substitute the little motor for his horse equipment, in contrast with to-day, when if he adds a motor equipment he has to increase and revamp his business accordingly to keep down the added expense."

THE PROBLEM OF BETTER ROADS

Harry W. Perry, writing in *Collier's Weekly*, declares that the problem of better roads resolves itself into an economic problem, exprest in the question, "Can we make and maintain good roads and be better off financially as well as otherwise for having them?" He recalls that under the old system, when most road work was left to local communities, there were many sections in many States that "could not raise the necessary money for any kind of hard-surface roads." Out of these conditions have grown the better plans by which a part of the cost—usually 50 per cent.—is paid by the State. There are twelve States at the present time which have even gone further—having actually taken over the entire work and cost of building the main through roads. Mr. Perry says further on this subject and on other phases of the road problem:

"Conceding that the people want better roads and that the money is or will be forthcoming to build them, the real problem is how to spend the money wisely. This is one that highway commissioners and engineers are wrestling with all over the country, but more particularly in the East, where population is densest and the roads bear the most traffic. Roads that met the traffic needs fairly well a dozen years ago will not sustain the mixed traffic of horse-drawn vehicles, automobiles, and motor-trucks of the present time. The dust which is ground off of the road surface by the iron shoes of the horses and the iron tires of wagon wheels, and which is needed to cement the fragments of stone together, is sucked up by swift automobiles and blown away by the wind. The road surface then quickly ravels and the road goes to pieces. Unless repairs are made promptly, water collects in the holes and softens the base of the road, so that heavy trucks or farm wagons break through and it is not long before the road needs to be rebuilt. The Massachusetts Road Commissioners cite examples of new roads that were built in the most approved manner in sections remote from any large cities and which went to pieces in less than a year and consequently had to be resurfaced at a cost of $1,400 a mile.

"In the New England States and in England and France, where the road systems have already been built, much more money is spent for road maintenance than for construction. It costs more than $500 a mile per year to keep the Massachusetts State roads in repair, according to the highway commissioners. Half a million dollars was spent in 1912 for maintenance in the Bay State, of which $300,000 was paid out of the automobile fund. The average cost of maintenance and repair in the States of Massachusetts, Connecticut, Rhode Island, New York, and New Jersey for the eight years from 1905 to 1912 inclusive is given at $608 a mile per year. The motor-vehicle is generally blamed for the rapid destruction of the roads, and the fees for registration and for drivers' licenses have been increased repeatedly to raise money to be applied to road repairs.

CAN YOU EFFECT BIG BUSINESS ECONOMIES?

What is your road and street transportation costing?

How much can be saved in the cost of moving your goods? Have you investigated?

Are you operating horse-drawn vehicles? If so, do you know what they cost you?

Have you ever had a motor-truck traffic engineer give you an estimate on gasolene or electric vehicles?

A mining company, hauling its ore over rough mountain roads, displaced 32 horses by 5 motor-trucks. The same company reduced the cost of moving the ore by horses $18 per ton to a cost by motor-trucks of $8 per ton.

Which demonstrates that the subject is worth investigating whether you have a retail store delivery, a big factory freightage, or a mining output.

The Motor-Truck Department of The Literary Digest is organized to put you in touch with traffic engineers, who are experienced in the particular line of transportation in which you are interested. All readers of The Literary Digest are invited to avail themselves of the service of the Motor-Truck Department. This service is free to all without any obligation whatever.

In writing to us, do not fail to mention the character of goods which are to be transported by you; the average weight per load; average distance hauled; general character of roads or streets, etc. Your letter will receive our careful and individual attention.

Motor-Truck Department

The Literary Digest

"New York State derives a road fund of $1,235,000 a year from its 130,000 motor-vehicles, Massachusetts about $650,000 a year, Pennsylvania nearly $600,000, New Jersey $470,000, Ohio $400,000, and other States corresponding amounts according to the number of registrations and the size of the individual fees. There are approximately 1,200,000 motor-vehicles registered in all the States of the Union, which, at an average of $10 each in registration and license fees, fines, etc., represent about $12,000,000 paid by their owners yearly to repair the damage they do to the roads. They are the only kinds of vehicles that pay a special road tax.

"However, leading State highway commissioners assert that the sharp calks on horses' shoes and narrow iron tires on heavily loaded wagons are highly destructive of roads. Chairman Sohier, of the Massachusetts commission, tells of particular instances in which roads that stood up well under the traffic of 1,000 automobiles a day were cut to pieces in a few months by wagons hauling coal and ice, and that, after the wagons were replaced by motor-trucks, were soon rolled down again into good condition.

"Whether or not motor-vehicles are more injurious to roads than other kinds of traffic, they must be reckoned with, for, while various State legislatures have passed laws limiting the weights and speeds of motor-trucks, it is unlikely that any progressive American State will attempt for long to restrict the development of motor-trucking to the present inadequate state of the roads and ancient bridges.

"Almost two-thirds of all the traffic on all the State roads of Massachusetts and Connecticut at the present time is motor-driven. This has been ascertained by the State highway commissions by elaborate checking of all passing vehicles and is authentic. As a matter of pure economy, then, it is essential to build roads that will be most durable under mixed motor-vehicle and horse traffic.

"We must save the $500 or $600 a mile that is now being spent on road maintenance every year. If the road engineers are not yet satisfied what kind of materials and methods to use, is it not high time that they appoint an investigating committee to study the different kinds of roads having any claims to permanency and their comparative costs of construction and maintenance?

"The investigation should include the suitability of the different kinds of roads for all classes of traffic, their resistance to wear, to water and frost and to temperature changes; the comparative cost per square yard for putting down the base and wearing surface carefully separated from costs of foundation work, such as grading, drainage, retaining walls, and culverts; and finally the cost of repairs and rebuilding or resurfacing over a long period of years—say a quarter of a century, wherever data are available for roads built so long ago. The findings of such a committee would be invaluable at this time, for they might prevent the wasting of millions of dollars of public-road money during the next decade."

CHEAPER ELECTRIC TRUCKS

It is declared by *Automobile Topics* that "large inducements" await the enterprising person who shall establish stations where he can sell electric energy by "the simple plan of exchanging charged batteries for discharged batteries." Along with this need exists also need for a low-priced electric truck. While difficulties remain to be overcome in both cases, the writer believes both are feasible enough and that they will continue to be a subject of discussion. At a recent talk on the matter by an electric-vehicle association, the following points were brought out by different speakers.

"A great deal of difficulty has been caused the electric-vehicle user because of battery trouble. The electric-vehicle industry has suffered greatly in the past on this account, and also because of poor garage facilities. Conditions are improving however:

"William P. Kennedy proposed the low-priced car. The proposition was advanced with caution and in a limited way. Nevertheless it was a definite suggestion that the electric-vehicle maker might, with profit to himself and to the industry, put forth a cheaper product. He proposed the replacement of the horsed vehicle now used in cities by contractors in hauling between terminals and warehouses with a special type of low-speed electric to sell at $1,000 or under. 'It is quite possible to produce at the present price of horse equipment an electric vehicle that will do the same work that is now being done by horses.' 'The teaming contractors that move this enormous bulk of merchandise between the docks and piers in the great cities and the warehouses handle a five-ton load, moving a total distance of perhaps six miles in the day at the rate of about two miles an hour. Instead of producing a two-ton vehicle capable of covering forty miles a day at an average speed of about eight miles an hour, it would be perfectly possible with its present facilities for the automobile industry to turn out a five-ton truck, to run at an average of two miles an hour and to cover not over ten or twelve miles on a single charge. Such a vehicle, of a rugged and durable type, could be made to sell at a profit for less than $1,000. Perhaps it could even be made in quantities to sell for $500 to $800.'

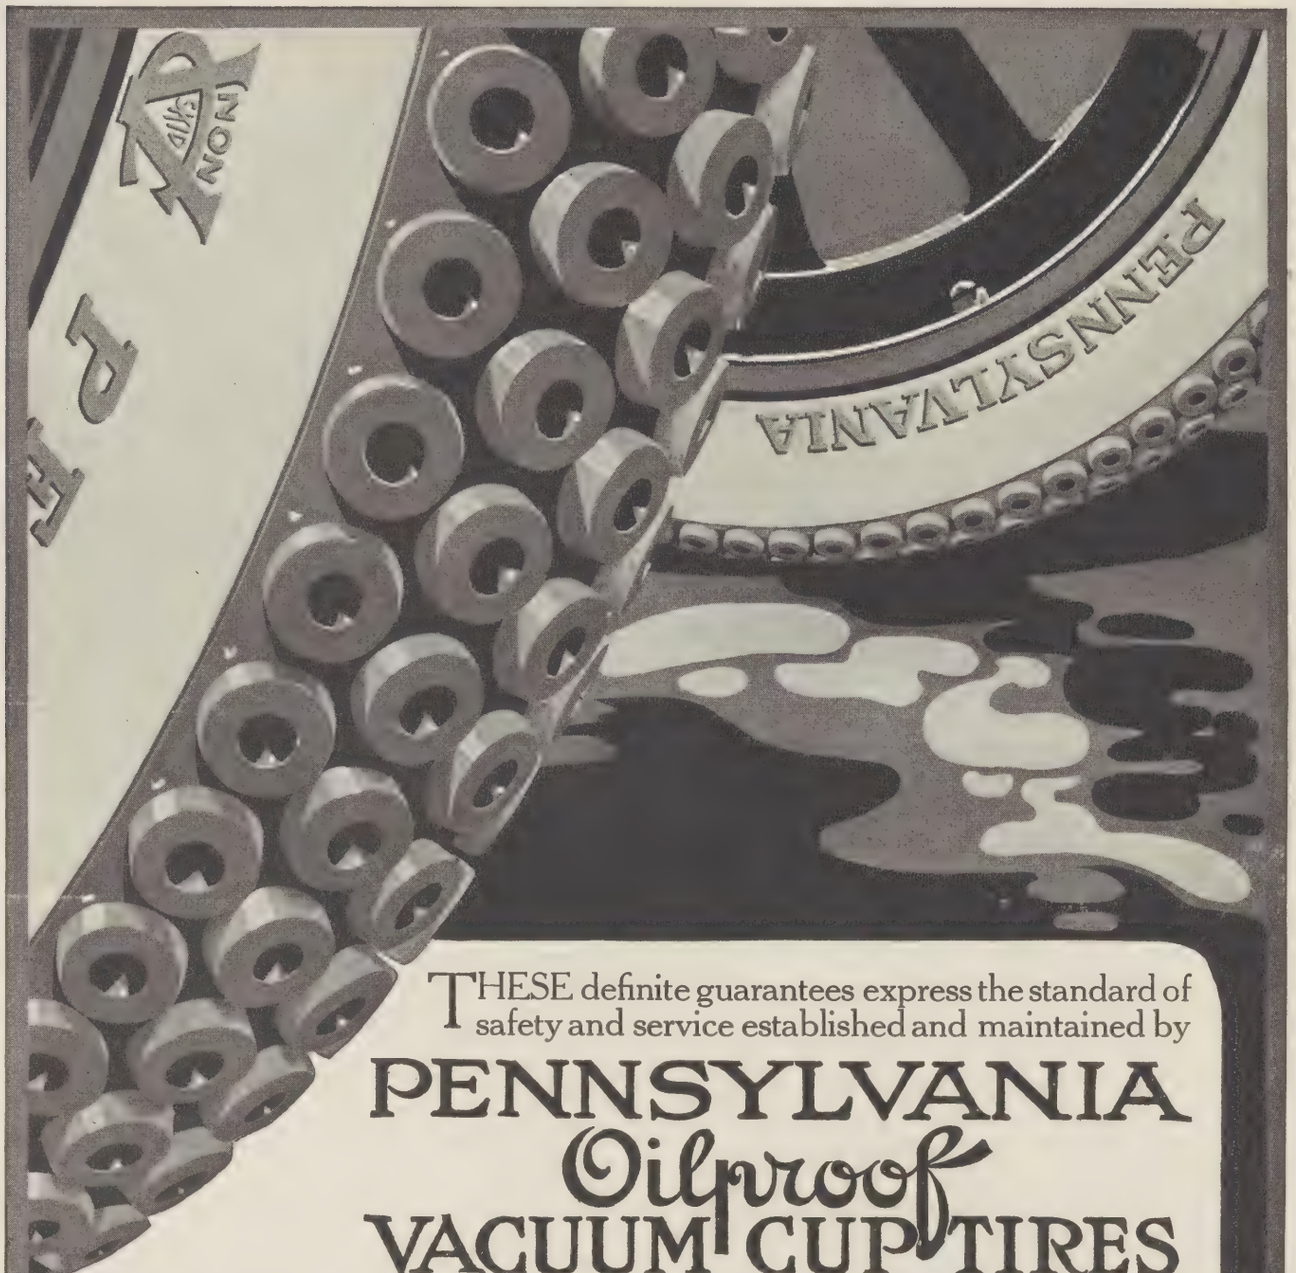
"Mr. Kennedy's suggestion provoked considerable discussion, and was immediately misinterpreted to apply to the vehicle supposed to be required by the small retail tradesman. Such a vehicle, if of the electric type, it was objected, could not be made to sell profitably at so low a price. Whereupon the members of the association were informed that Henry Ford already has made a thorough study of the question and is prepared, when the market is ready, to produce an electric equivalent of his present car suitable for commercial purposes and selling at a correspondingly low price. 'I believe it is now an assured fact,' said one of the speakers.

"Kennedy stifled all objections to the very small and cheap electric delivery wagon, however, by expressing his belief that the average small tradesman who can be persuaded to invest in motor equipment feels he must have a vehicle of somewhat pretentious aspect. He would be unwilling to purchase a vehicle really suited to his needs, because of its necessarily modest appearance, he explained. Therefore, to sell such a machine would be exceedingly expensive, and the market would prove hard to develop. His suggestion applied only to the direct replacement of horses in city trucking with a mechanical equivalent that would do the same work at less cost."

CHEAP AMERICAN CARS IN EUROPE

American consuls in foreign cities continue to report favorably on the market in Europe for cheap cars manufactured here. These reports have been made the basis of a letter printed recently in *Motor Age*. Germany is reported to have been particularly prosperous as to motor-cars. In 1912 she built about 24,000 and imported about

(*Continued on page* 1318)



THESE definite guarantees express the standard of safety and service established and maintained by

PENNSYLVANIA Oilproof VACUUM CUP TIRES

Guaranteed not to skid on wet or greasy pavements, or returnable at full purchase price after reasonable trial period.

Guaranteed against all deterioration due to the action of oil, wherever encountered.

Guaranteed to give 4,500 *actual* miles of service, under liberal and definite conditions printed on tag accompanying each casing.

The unusual qualities and features that have evolved and confirmed these guarantees through long and diversified actual use, have brought Vacuum Cup Tires to the head of the line. After experiencing Vacuum Cup economy and safety no motorist is ever satisfied with lesser service.

On heavy, powerful automobiles the service and safety of Vacuum Cup Tires have become imperative—and this, too, emphasizes their superiority for cars of less severe requirements.

Good dealers everywhere stock Vacuum Cup Tires.

Every Taxpayer

would be delighted and definitely benefited if his city was conducted on a purely economic and strictly business basis. There is a new plan of city government which abolishes a raft of useless offices, sinecures, jobs, and political rewards, and substitutes organization, method, and work. This new plan has taken hold of the country, and over 70 American cities are now saving thousands of dollars yearly by its methods. Read

Government By Commission

by John J. Hamilton, who was largely instrumental in having the plan adopted in Des Moines, Ia., where it has been immensely successful.

Mayor E. H. Crump, of Memphis, Tenn., says: "I believe the book will be a source of great education to the American taxpayers who are anxious for a chance to secure business methods in the administration of municipal affairs."

Funk & Wagnalls Company, Publishers, New York

TRUSTEE'S SALE LANSDEN COMPANY NEWARK, N. J.

Bids are invited for all or any part of the complete manufacturing plant of The Lansden Company, makers of electric commercial cars, at Newark, N. J., before January 21, 1914.

Floor area, 30,000 sq. ft., office additional. Modern machinery for capacity of four cars a day, ready for operation. Room for sixty hands. Independent freight siding.

Repair and replacement parts on hand. Cars have been leaders for ten years, give perfect satisfaction, used all over the world by biggest concerns, including Adams Express Co., department stores, trucking companies, etc. Patents are valuable.

Good location, plenty of skilled labor, room for expansion.

Investors, factory owners, boards of trades, etc., should write immediately for catalog to Harry L. Davisson, 394 Frelinghuysen Ave., Newark, N. J., or Bilder & Bilder, Attorneys of Trustee, 164 Market Street, Newark, N. J.

MOTOR-CARS AND MOTOR-TRUCKS

(*Continued from page* 1316)

3,000. Italy in the same year produced 7,300, and imported 1,005. In Italy American light cars are "increasing in number." Other items are these:

"Denmark is reported as having 8,000 cars in use, one for every 400 of population, one-third of these cars being of American make. The preference is shown for cars of low upkeep. The interest in cycle-cars is very marked, most of these being German three-wheelers, which work admirably on the good Danish roads.

"Portugal, with a population of 6,000,000, has fewer than 2,000 cars in use from the following countries: France, 966; Italy, 384; Belgium, 154; England, 145; Germany, 137; United States, 75; Switzerland, 15; Netherlands, 5; Spain, 1; Denmark, 1; total, 1,883. About 500 cars were imported in 1912 as against 300 the year before, so that interest is increasing. Russia is making almost no motor-cars; tho the imports in 1912 amounted to more than $5,000,000. About 3,500 cars were imported and but 100 made in Russia. The Fiat Company has a branch factory in Russia. Seventeen per cent. of the machines imported were motor-trucks, which showed the greatest gain.

"The report from France mentions briefly the cycle-car and motor-cycle gain, but presents no figures on the motor-car. The report from Spain is given over to publicity on a new spring-tire device to be tested by the military authorities soon.

"The imports to Norway are greatly increasing. Christiania, the main port of entry, received more than double the number of cars in 1912 which came in in 1911. These amounted to $247,364, or more than to the entire country the year before.

"The increasing interest in the American car is worth notice, this being almost entirely in connection with the small types of low prices, a field not catered to by foreign manufacturers, except in England, where the new cycle-car movement has brought out a large number of small cars —but few cycle-cars.

"The competition of American cars in Germany has not as yet been felt, for, says the report, the German buyer prefers and will prefer to pay a little more for his car which he can use for a number of years than to buy a cheap American car which may not render the same service. In direct contradiction to this statement there follows the remark that the upkeep and operating expenses for a car are so important an item that these are likely to be considered rather than the mere question of original cost.

"The main American competition, it follows, will be in the motor-truck field rather than in passenger-cars. Altogether the report so overdoes the arguments proving the American car to be out of the question that one might imply a fear that there was some feeling in the matter after all. The report from Saxony states that there is a distinct field for the American cars if direct agents could be in charge.

"The upholstery of American cars is criticized as being too sloppily done, leaving seams, scratches, and nail-heads exposed. The dark color of the cars consumes much of the space of the criticism, for with the Italian buyer the idea is against the stern, businesslike appearance of the dark colors, and cries for bright colors and better polished accessories which 'give the passer-by the opinion of prosperity.' The metric system also is advised for the measuring and manufacturing of parts, as the inch system is confusing. Also speedometers should read in kilometers, for reasons which are obvious."

Are You Paying For This REO Two-Ton Truck? Then Put It To Work At Once

THIS is a message that no thinking business man can afford to pass by without close investigation. We show here, beyond a question, that any firm with enough hauling to keep this truck reasonably busy, cannot afford to do without it. We show even more—you are probably paying for this truck, whether you are using it or not.

As a careful business man, you have learned to distrust exaggerated or careless statements.

Perhaps you have looked at the motor truck that way in the past—as something risky, for which too much had been claimed.

Therefore, we will cut out idle claims and general statements. We will reduce our case to cold figures.

Then we will ask you to decide, on no other basis than your own profit.

Once you have cast your vote for motor trucks, and weigh the facts we place before you at their face value, there can be no doubt as to the truck you will select for your work.

Let us decide upon a proper basis of comparison between the REO Two-Ton Truck, and ordinary horse-drawn delivery.

We generally find that the REO Model J Truck will take the place of three horse-drawn trucks and teams, but, to be on the safe side, let us compare it to only two teams.

We will compare the REO hauling a two-ton load 30 miles daily, with two teams hauling the same load 15 miles each daily, for one month of 25 working days.

108 gals. gasoline, 20c	$21.60	Feed 4 horses, $15 mo.	$ 60.00
2 gals. engine oil, 50c	1.00	Shoe 4 horses, $1 mo.	4.00
2 pounds grease	.20	Veterinary and medicine, $10 yr. each	3.35
Tires 750 miles, 2c	15.00	Interest, 6%	8.45
Depreciation, 20%	27.10	Depreciation, 15%	21.13
Overhauling ($100 year)	8.35	Insurance	2.00
Interest, 6%	9.00	Paint and overhaul	5.00
Insurance	2.33	Two drivers	125.00
Driver	62.50		
Monthly operating and overhead cost	$147.08	Monthly operating and overhead cost	$228.93

The above is figured on investment basis as follows:

1 REO Model J Chassis	$1650.00	Two teams, $500	$1000.00
1 Body	150.00	Four harnesses, $40	160.00
Total investment	$1800.00	Four blankets, $7.50	30.00
		Two trucks, $250	500.00
		Total investment	$1690.00

This example is figured on a mileage and load that is certainly not more than 40% of the working capacity of the truck for ten hours, every day; while the mileage and load of the two teams is all they could be expected to accomplish each and every day—not taking into consideration that they could do no night work, as the truck can.

Even at these figures you can see the truck saving $81.85 per month—enough in eighteen months to buy a truck outright.

The Reason for the Reo

When we tell business men that we charge only $1650 for this big REO Two-Ton Truck, body extra, they cannot understand how we are able to build it at that remarkable figure. For an analysis of the situation shows 54 competing trucks average in price $2701.

Only a great and thoroughly experienced organization like the REO could possibly accomplish this result. Because of our unusually large and time-proven output, we have been able to reduce costs to a point impossible with a smaller organization, no matter how efficient.

If you do not find one of our 1500 dealers near you, write us and let us help you. We have, in the course of our wide experience, accumulated a wealth of interesting and valuable information on haulage costs which is at your service. Tell us your problems, and we will give you our unbiased help in arriving at the right answer. Full information will also be sent about REO Motor Trucks.

REO MOTOR TRUCK COMPANY, 1916 South Washington Avenue, Lansing, Mich.

Price in Canada $2200, chassis including drivers' cab; body extra. Reo Sales Co., St. Catharines, Ont.

Talk with the man who rides on TIMKENS

YOU can't know too much about the motor-car—the one you own or the one you expect to buy. Timken advertisements have told you about the foundations of the car—the axles and bearings. They have told you how two great Timken organizations are devoting themselves solely to the tasks and ideals of building the axles and bearings that will give the best possible service in motor-cars, pleasure and commercial.

And you know that it is not what the *maker* says about his products but what *users* say about the *performance* of those products that makes or breaks their reputation.

Sincere advertising pays. We believe in it and in the big definite objects of Timken advertising. Have you wondered what those objects are?

Timken Axles and Bearings are not in any sense "accessories." They are important *integral parts* of the car and can be sold only to car manufacturers. There exist in the United States not more than 150 car makers who can be possible Timken customers.

ONE great object of Timken advertising is to emphasize the obvious fact that cars which are to give lasting satisfactory service *must be built of the right parts*. Right foundations—axles and bearings; right motor, steering mechanism, springs—right every part.

And these right parts must be rightly "engineered" into the car by the combined efforts of the engineers who design the car and the engineers who design the integral parts.

Emphasizing these facts helps the whole motor-car industry.

We believe the public will reward all of us makers of axles, of bearings, of other parts and of complete cars who are sincerely striving to put the utmost use-service-value into our products.

ANOTHER object is to so *widen* the existing good reputation of Timken Axles and Bearings that they will have, in addition to their service value to the car owner, a distinct selling value to the car manufacturer. Knowing, as you and we do, that a *lasting* selling value can exist only where the truth is told and can be proved.

Widening the good reputation of Timken Bearings and Axles will, we believe, render a real service to car buyers—because Timken Axles and Bearings are standing up to the test of every-day use; a real service to dealers and manufacturers—because selling *real* values is their problem; and a real service to ourselves—because our future business success depends on the success of users, dealers and makers of Timken-equipped motor-cars.

THUS you have the main objects beneath all Timken advertising. And to accomplish those underlying objects each individual advertisement aims to induce you to talk with the man—there are thousands of him, everywhere—the man who rides on Timkens.

Those of you who ride on Timken Bearings and Axles know what service they render. Tell it, we urge you, tell it to others—for their benefit.

And you who are going to buy cars, ask about the day-after-day and year-after-year service Timken Axles and Bearings are giving. Ask, for your own benefit.

WHILE earnestly trying to build the axles and the bearings that will give the best account of themselves in use we recognize you, the car owners, as the court of final appeal. Our whole future success depends upon your verdict. If now or in the future you find that other axles or other bearings are giving better service than Timkens we not only expect, but advise, you to give them your support.

It is only because of our supreme faith in our ideals and our products, axles and bearings, that we dare ask you—for your own information and benefit, to talk with the man who rides on Timkens.

The reasons back of our confidence in your verdict are given in the Timken Primers, C-1 "On the Care and Character of Bearings" and C-2 "On the Anatomy of Automobile Axles." Sent free, postpaid, on request to either company.

PERSONAL GLIMPSES

(*Continued from page* 1296)

of thousands additional cubic yards of dirt, he regarded the extra labor as a mere incident, in no wise affecting the ultimate accomplishment of the task to which he was set. He unemotionally shoveled the clay objections out of the way, much as the householder shovels a snowslide from his sidewalk, and went about his business of cutting the backbone of Culebra.

David Du Bose Gaillard was born in Fulton, Sumter County, S. C., September 4, 1859, the son of Samuel Isaac and Susan Richardson (Du Bose) Gaillard. His education began in the South Carolina private schools, and was academically finished at West Point, where he was graduated in 1884. Then followed two and a half years at the Engineer School of Application. From there he went as assistant on river and harbor and fortification work in the Florida district for over four years. From February, 1892, to December, 1894, he was a commissioner on the Mexican boundary survey. In 1895 he was on fortification work at Fort Monroe, Va.

He was assistant to the Engineer Commissioner of the District of Columbia for a time. Later he took charge of river and harbor work on Lake Superior, remaining there until June, 1903. He was then detailed with the general staff of the army in May, 1903, and with the exception of a few months he remained on duty with the general staff until March, 1907.

He was serving in Cuba on the general staff as chief of the military information division at the time of the disturbance there in 1906, and was appointed to duty on the Isthmus of Panama while still on the island in February, 1907. He was promoted to the rank of lieutenant-colonel April 11, 1909.

TRAFFIC IN NAMES

WHEN a man in Tampa, Florida, or Cheyenne, Wyoming, receives a courteous business letter from a St. Louis or Baltimore business house about which he has never heard, he may wonder how in the world his name ever became known to such a concern. It probably does not occur to him that by buying something by mail he has made his name a commodity in itself and become a target for commercial correspondents as long as he lives and probably long after a tombstone has been erected to him on some grassy hillside. His name and address may be used by perfectly respectable enterprises or by fakers, depending usually upon the kind of a concern he first tries to do business with. Some particulars are furnished by the Kansas City *Star:*

If you have ever answered the advertisement of a medical concern your name and address is worth anywhere from two cents to ten cents. But if you have actually bought medicine by mail it is worth more.

If you have ever been so unwise as to buy treatment from any of the hundreds of quacks that advertise, your name is worth anywhere from twenty-five cents to $5. It all depends, in that case, on how susceptible a "sucker" you have been. Quack doctors have been known to pay as high as $5 a name for men who were good "producers," that is, who have paid money for long periods for medical treatment.

The names and addresses of those who buy whisky by mail have a very live value. A brisk trade is carried on in those lists of names, the theory being that a man who has the habit of buying liquors by mail is a steady drinker and that he may be induced to give his patronage to another house.

Some idea of the value placed by a whisky house upon the lists of names of its customers who order by mail may be had from an incident that occurred in this city a year or so ago. An employee of a whisky house that did a large mail-order business was induced to leave the employ of that house and enter that of another in the same business in this city. One of the considerations was that he was to bring with him the lists of mail customers of the house he was leaving. He secretly copied the lists and took them with him to his new employers. The firm he had left learned of this and it employed a very shrewd lawyer to get them back. The lawyer applied to the circuit court for a writ of replevin, and armed with this he and an officer went to the office of the rival concern and entered. The plan of recovery had been carefully laid out in advance. On the sidewalk below the window of the offices a man was stationed. Then the lawyer and the officer with him grabbed the lists of names and threw them out the window before the man in the office realized what was going on. The man on the street picked up the lists and rushed away with them and concealed them.

The house that had lost its lists in this way raised a great legal hubbub about it. Suits and counter-suits were brought, but the lists of names had effectually disappeared; no one could be found who would admit that he knew where they were, and they were never recovered.

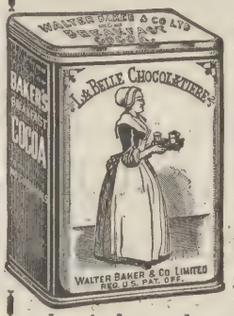
There are firms that make a business of dealing in names of mail-order customers. They are principally in the East. This firm writes to a house in the mail-order business and offers a price for the list of names of live customers. If they buy a list for one cent a name they sell the list for a little more and thus make a profit. Recently a business house in this city decided to try out the experiment of advertising a book it published. Within two weeks it received circular letters from several firms in the East, principally in New York, offering to sell lists of names of persons who were in the habit of buying books by mail.

The mail-order departments of the big dry-goods stores are constantly receiving offers of lists of names.

The clerks in the tax office of the different counties in the West often write to mail-order houses and departments offering to sell lists of the names of every man who is a taxpayer in the county. These names are copied from the tax rolls. They are supposed to be valuable because a man who pays taxes in the country is in a position to buy goods and pay for them. Other clerks in the county offices in the country make a business "on the side" of making lists of live-stock men only, as that class of men are known to have money.

BAKER'S COCOA

Is Good Cocoa



Of fine quality, made from carefully selected high-grade cocoa beans, skilfully blended, prepared by a perfect mechanical process, without the use of chemicals or dyes. It contains no added potash, possesses a delicious natural flavor, and is of great food value.

THE SPICE OF LIFE

Grief.—Man never realizes what mutual sorrow really is until he reads an editor's regrets.—*Puck.*

Wins Either Way.—"They say that a man who has cold feet is pretty sure to have an active brain."

"Yes, either that or a well-filled purse."—*Chicago Record-Herald.*

Not So Many After All.—There are about 200 brands of religion. But that isn't so many when you remember that there are about 78,962,354 brands of cussedness.—*Cincinnati Enquirer.*

Near.—"He is one of those near-vegetarians."

"What is a near-vegetarian?"

"He never eats meat except when he is invited out."—*Houston Post.*

Easy to Find.—"And did you ever seek the man," we asked the Office.

"Once or twice," replied the Office. "But I found him waiting outside my door."—*Cincinnati Enquirer.*

Fortunate.—"Did your husband have any luck on his hunting trip?"

"Splendid! Didn't you hear?"

"No, what was it?"

"He got back alive."—*Houston Post.*

He Should Fret.—"You can't fool all the people all the time," announced the Investigator.

"I know it," replied the Trust Magnate. "There is plenty of profit in fooling half of them half the time."—*Cincinnati Enquirer.*

Nick's Disguises.—SMALL BOY—"Mamma, is it really true that the devil has horns and a club foot?"

MOTHER—"Ah, my dear, sometimes the devil appears in the shape of a very handsome and charming young man."

BOY (pityingly)—"Oh, mummy! You're thinking of Cupid."—*Punch.*

Staying with Them.—"Some of your constituents are disagreeing with you," said the trusted lieutenant.

"Well, keep tab on them," replied Senator Sorghum; "when enough disagree with me to constitute a reliable majority, I'm going to turn around and agree with them."—*Washington Star.*

A Suggestion.—SIR—In the November *Scribner's* Theodore Roosevelt writes:

"I was informed by entirely trustworthy people that in swimming cattle across a river savage hippos had been known to assail and kill them."

Why do the hippos swim their cattle across a river? And why do they destroy their own property?

A colleague of mine writes, in an account of a shipwreck: "Being swept from stem to stern by tremendous waves the captain abandoned the ship."

Wouldn't it be feasible for the American colleges to institute a course leading to, say the degree of D.P.C., that is, Doctor of Participial Constructions?—*Corr. of the New York Evening Post.*

Weakest Cog.—"What's most liable to get broke about your automobile?"

"The owner," replied Mr. Chuggins.—*Washington Star.*

Anguish.—"Do you ever weep over a story?"

"Sometimes when I get it back from the publishers."—*Houston Post.*

Consolation.—Another good thing about being a vegetarian is that when the price of hen eggs is prohibitive one can eat the nests.—*Dallas News.*

Surprized.—COUNSEL FOR THE DEFENSE (to client who has been dozing during the verdict)—"Wake up and get out. You're acquitted!"

THE ACCUSED—"Lor' lumme. Wot! Not guilty?"—*Sydney Bulletin.*

Perfectly Satisfied.—A large, slouchy colored man went shuffling down the road whistling like a lark. His clothes were ragged and his shoes were out at toes and heels, and he appeared to be in the depths of poverty for all his mirth.

As he passed a prosperous-looking house a man stept from the doorway and hailed him. "Hey, Jim! I got a job for you. Do you want to make a quarter?"

"No, sah," said the ragged one. "I done got a quarter."—*Everybody's Magazine.*

No Change.—The young men or the town had bought the vacant lot opposite Miss Martha Billingsby's "fashionable school for young ladies," purposing to build a club-house thereon.

"I am sorry for you," said one of Miss Martha's friends; "I fear having those young men opposite you instead of that empty lot will seriously injure your school."

"Oh, never fear," answered Miss Martha promptly; "I can assure you that it will still be an empty lot."—*Neale's Monthly.*

Busy Days.—"Where's the president of this railroad?" asked the man who called at the general offices.

"He's down in Washington, attendin' th' session o' some kind uv an investigatin' committee," replied the office boy.

"Where is the general manager?"

"He's appearin' before th' Interstate Commerce Commission."

"Well, where's the general superintendent?"

"He's at th' meetin' of th' legislature, fightin' some bum new law."

"Where is the head of the legal department?"

"He's in court, tryin' a suit."

"Then where is the general passenger agent?"

"He's explainin' t' th' commercial travelers why we can't reduce th' fare."

"Where is the general freight agent?"

"He's gone out in th' country t' attend a meeting o' th' grange an' tell th' farmers why we ain't got no freight-cars."

"Who's running the blame railroad, anyway?"

"The newspapers and th' legislatures."—*Pittsburg Press.*

As sure as the Whirl of the World

A *Capable* Starting Motor

SO rugged and powerful that it will spin a big six-cylinder automobile engine faster than 100 revolutions per minute with the ease of a Hercules and on less than 100 amperes of current, the Auto-Lite Starting motor can be relied upon to perform its function faithfully and fully—compelling positive starting day in and day out, winter or summer.

Strong — compact — *capable* — fully enclosed — protected from the deteriorating effect of water, dirt and grease, it is built for hard, continuous service and should last longer than the car to which it is attached.

Look for this efficient starter on your 1914 car.

The manufacturing and financial facilities of the Electric Auto-Lite Company are adequate to handle contracts of any size, not only for starters but for complete electric lighting and ignition systems as well.

An Explanation to Owners

While the complete Auto-Lite electric lighting system may be attached easily to the average car, it is more difficult to install a starting motor because space and structural limitations sometimes necessitate material alterations and considerable machine work before a satisfactory application can be made—hence orders from individual owners for *starting motors* are not solicited.

You *can* have the complete Auto-Lite equipment on your *new* car however.

Manufacturers can furnish it if you so specify.

The Electric Auto-Lite Company

"The Pioneer Makers of the 6-Volt Electric System" **Toledo, Ohio**

Every Motorist should have a copy of the Auto-Lite Handbook on Automobile Electric Systems.

Explains in detail, functions of the various parts—how to locate and remedy troubles of all kinds—embraces all electrical automobile systems. The large operation chart which it contains is alone worth the price.

Regular price, 50c.

Will be sent to you for 10c in stamps if you use the coupon.

Johns-Manville Service Branches in 49 Cities assure satisfactory service to Jones Speedometer owners

Circles on map indicate J-M Service Branches Dots indicate location of direct representatives

WITH its five millions of capital and its tremendous resources in sales methods and service the H.W. Johns-Manville Company will hereafter control the selling, and, in connection with the inventor, Mr. Joseph W. Jones, the manufacturing policies of the

Jones Speedometer

Centrifugal Principle

This means that Jones Speedometer owners are assured efficient Johns-Manville service wherever they may be. It means that a Jones Speedometer is as conveniently kept in repair as a watch.

Forty-nine established Service Branches and 589 direct representatives throughout the country offer unrivalled repair and replacement facilities. No other speedometer manufacturer can honestly claim such far-reaching, efficient service.

And the H. W. Johns-Manville Company alone has the advantage of being able to distribute the great cost of this service over an extensive line of high-grade Automobile Accessories—rather than a single article.

That the centrifugal principle of the Jones Speedometer is absolutely accurate at all speeds—unaffected by temperature, vibration or magnetic influence—has been proved again and again by road and laboratory tests.

And now to the unrivalled qualities of the Jones Speedometer is added the unrivalled Johns-Manville Service.

The H. W. Johns-Manville Tag attached to every Jones Speedometer is a positive guarantee of mechanical perfection and sincerity of service.

You can have the Jones Speedometer installed in any car if you specify it.

Send for booklet describing why the centrifugal principle insures accuracy in Jones Speedometers — and learn more about the efficiency of the H. W. Johns-Manville Service.

H.W.JOHNS-MANVILLE COMPANY

Manufacturers and Marketers of Brake Lining, Spark Plugs, Electric Lamps, Speedometers, Horns, Fire Extinguishers, Dry Batteries, Vaporizers, Auto Locks, Fuses, Tapes, Packings, Roofings, Pipe Covering, etc.

CURRENT EVENTS

Foreign

December 11.—More than 250 natives perish in a terrific tornado on the coast of Sierra Leone.

The Euphrates dam, the first step in the reclamation of Mesopotamia, is completed.

Col. Arthur Homan, of St. Gall, is elected President of the Swiss Confederation.

December 12.—The Russian Government proposes to the Powers the withdrawal of all foreign troops, including even legation guards, from China proper.

Da Vinci's "Mona Lisa," the celebrated painting stolen from the Louvre in August, 1911, is discovered in Florence, Italy.

December 14.—The German Crown Prince is recalled from Danzig to Berlin to join the general staff of the Army, thus ending his exile from the capital since 1911.

The Japanese battle cruiser *Haruna* is launched at Kobe, Japan.

The island of Crete is formally annexed to Greece, King Constantine running up the Hellenic flag over the fort at Canea.

December 15.—The strongest earthquake in several years is experienced at Tokyo and Yokohama, Japan.

The British battle cruiser *Tiger*, whose engines are designed to give the hitherto unattempted horse-power of 100,000, is launched at Clydebank, Scotland.

Cardinal Rampolla, one time Papal Secretary of State, dies in Rome.

December 16.—The Italian Foreign Minister announces that the Triple Alliance compact has been renewed without modifications.

The French Government withdraws the measures authorizing an income tax and a loan of $260,000,000.

Domestic

WASHINGTON

December 11.—Secretary Bryan issues a statement defending United States Minister Sullivan from charges in connection with Dominican concessions.

Secretary of War Garrison announces that Major-General Wood will not be reappointed Chief of Staff.

December 15.—Secretary Bryan and Chevalier Van Rappard, the Netherlands Minister, agree upon peace-treaty terms.

The United States Department of Agriculture estimates the country's fourteen principal farm products to be worth $4,940,301,000, exceeding the 1912 value by $182,772,000. The total value of all products of the soil, including animal products, is placed at $9,000,000,000.

December 16.—A corps of statisticians in the Post-office Department, working under the direction of Representative Lewis, of Maryland, complete a plan for taking over the American Telephone and Telegraph Company's properties at an estimated cost of $250,000,000.

The annual report of the Collector of Internal Revenue says the corporation tax for the year ending June 30 last was $35,006,299.

By a vote of 35 to 14 the Republican National Committee kills a resolution calling for a special convention of the party.

December 17.—Postmaster-General Burleson, in a report to Congress, advocates Government ownership of telephone and telegraph lines.

The Republican National Committee makes a reduction of 93 in the number of delegates to be chosen for the next national convention, the Southern States and the Territories losing 82. The committee recognizes the primary-election system in the States and decides to abandon the custom of passing upon the credentials of delegates thus chosen. It also appoints a committee to ascertain the advisability of adopting the reform ideas of the progressive leaders at the 1916 convention.

To meet the criticisms of Senator Root, made on December 13, the Senate Democratic caucus strengthens the reserve clause in the Currency Bill and makes other changes.

GENERAL

December 12.—Mayor Harrison, of Chicago, accepts the resignations of five members of the Board of Education, all of whom were leaders in the fight against Mrs. Ella Flagg Young as Superintendent of Schools.

December 16.—Thirty-eight miners are killed by a dust explosion in a coal-mine at Newcastle, Colo.

John D. Shoop, who defeated Mrs. Ella Flagg Young for Superintendent of Schools in Chicago, is asked by a committee of Mrs. Young's friends to resign and let her continue in office.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"C. D. B.," Bangor, Me.—"Which of the following questions is correct, and why? 'Yet, of the two, which would you be *quickest* to choose?' or 'Yet, of the two, which would you be quicker to choose?'"

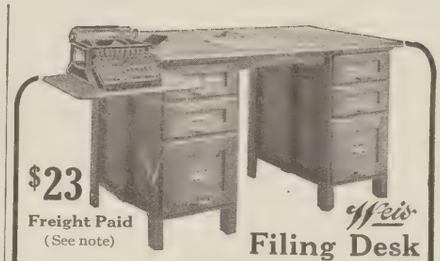
The common assertion of grammarians that the superlative degree may not be applied to two objects is not supported by usage and is flatly contradicted by almost every one who affirms it. If you care to follow the subject further, consult Goold Brown's "Grammar of English Grammars" (p. 282), which you will, no doubt, find in the Public Library at Bangor.

"L. E. B.," New York, N. Y.—"(1) Kindly explain in a concise way the use and abuse of the auxiliary 'have' so that a foreigner could grasp it; as, for instance, in the sentence 'We have sent you already a week ago.' (2) Is it better English to omit 'have' in the sentence 'We have elected this procedure, as by so doing we can give you a more advantageous rate of exchange'? (3) Are the following incorrect? 'Owing to the generally unsatisfactory market conditions, we are unable to place the bonds in question.' 'The unsatisfactory market conditions generally have precluded,' etc. 'The generally unsatisfactory market conditions have precluded,' etc. (4) Can the word 'avail' be used without the reflexive pronoun, as 'We are unable to avail of the opportunity,' etc.?"

(1) The distinction in English between the *preterit* (or *past*) tense—that formed in "regular" verbs by adding *-ed*, *-d*, or *-t*—and the *present perfect* (or *perfect*)—that formed with the auxiliary *to have* and the *perfect* (or *past* or *passive*) participle of the verb undergoing inflection, is in the main this: (1) The *preterit* tense refers merely to a past moment at which an action was done. It does not refer to the time prior to that past moment, nor to the time between that past moment and the present. The *present perfect* tense refers to the past time extending up to the present moment. Indeed, the reference is rather to the *present* state of an action done in the past than to a past performance of it; the action is spoken of as at the *present* moment *perfect*, completed, done. To illustrate by the first sentence that you quote: "We have sent you *already a week ago*," etc., here *already* refers to the present moment; the action is *already*—at the present moment—*done*. "We *have sent* you *already*" or "*have already sent* you" is exactly right in the choice of tense. But *a week ago* refers to a *past* moment, and so suggests not so distinctly that the action is at this moment *done, completed*, as that it took place at a past moment. "We *sent* you *a week ago*" expresses that idea properly. When you use both adverbs of time, *already* and *a week ago*, one of them must be subordinate in influence—must be a sort of added, explanatory phrase, meant to give more precise information than the other. In the present case, *a week ago* is the explanatory adverb; *already* is the controlling adverb. Consequently the phrase *a week ago* should be sufficiently detached from the other elements of the sentence, by punctuation or position, to make clear that it is an added, explanatory phrase and does not influence the tense of the verb. This is effected by writing: "We have *already* sent you, *a week ago*, . . ." If *a week ago* is allowed to influence the tense, and *already* is also retained, one must write: "We HAD already sent you a week ago," etc.

(2) With regard to the second sentence you quote, "We *have elected* this procedure,' etc., whether to say *have elected* or *elected* depends upon how the writer (or speaker) wishes to put the matter. Does the writer refer to the choosing as action occurring at a past moment or as a present accomplished fact? In the former case he should say, "We *elected*"; in the latter, "We *have elected*."

(3) "Owing to the generally unsatisfactory market conditions" is an expression correct in grammar and clear in meaning. So also is "The



$23 Freight Paid (See note)

Weis Filing Desk

Increases Office Efficiency

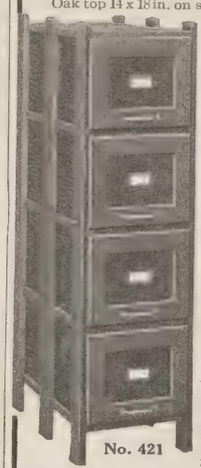
There are 10 kinds of drawers for filing Letters, Index Cards, Blanks—all business papers. *Your choice* of these drawers arranged to suit *your* needs.

The files you want are always at your finger tips—within reach from office chair. Drawers on Roller Bearings. Solid Oak Desks. Top 28 x 52. Handsomely finished Golden, Natural or Weathered. Let us tell you more about this Efficient "Office on Legs."

Weis Swinging Desk Stand

for Typewriter, Reference Books, etc. May be attached to either side of any style desk.

Oak top 14 x 18 in. on strong metal frame. *Locks* where you want to use it. *Swings* out of way when not in use. Metal Parts Black Enamel. By Parcel Post anywhere in U. S. $3.50



No. 421

This Solid Oak File holds 20,000 Letters on edge for instant reference.

This is as serviceable and practical a cabinet as any at any price. The elimination of superfluous parts—*not cheapness* in material or workmanship, makes the price low.

Built of solid, seasoned Oak, as strong as glue, screws and interlocked joints can make them. Golden, Natural or Weathered finish—Freight paid (see note) $13.25

Drawers on Roller Bearings, operate easily under heavy load. Dust proof and fitted with follow blocks.

A low priced file which serves all practical purposes.

Two Drawer $8.00 — Three Drawer $11.25.

Get Catalog "F." It shows full line.

Helpful Booklet "Filing Suggestions"

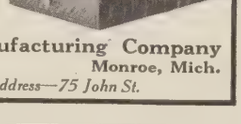
will be sent on request. Assists in solving filing problems.

Catalog "F"—96 pages Time and Trouble Saving Office Devices. Catalog "H" shows two lines of Sectional Bookcases. Write now for either or both.

NOTE:—Freight paid on Desk or Cabinet to any Railway Station in Eastern and Central States. Consistently low prices in West and South.

Weis Stationery Cabinets

provide accessible space for Stationery for current use. Neat and handy. Has a lid which raises and recedes.



All Quartered handsomely finished Oak $3.00 — by Parcel Post anywhere in U. S.

See Dealer or Write.

The Weis Manufacturing Company

WM. H. JACKSON CO.

2 West 47th St. N.Y.

generally unsatisfactory market conditions have precluded," etc. But "The unsatisfactory market conditions *generally* have precluded" is ambiguous because the position of *generally* makes it uncertain which was general—the unsatisfactory conditions or the preclusion. If the latter, say ". . . have *generally* precluded," etc.

(4) It is colloquial to use *avail of* without a reflexive pronoun as object; say, "We are unable to avail ourselves of the opportunity."

"F. M. C.," Nunn, Colo.—"Is the following sentence correct? 'These truths are of vital interest to parents and all who hope to be.'"

The word "parents" being understood, the sentence is correct. The implied ambiguity is based on specious reasoning, for the remark could not apply to persons who hope to *be*, that is, literally, to come to life.

"M. S.," Montreal, Canada.—"'A' says that to lift one's hat to a person or to a national flag indicates worship; 'B' says it indicates honor. Who is right? Kindly give the definition of *worship*."

Worship is primarily "the act or feeling of adoration or homage *toward a deity*, especially toward God; the paying of religious reverence and divine honors such as adoration, thanksgiving, prayer, praise, and offerings." A secondary meaning is "the act or feeling of deference, respect, or honor toward worthiness or toward a position deemed worthy or high."

To raise one's hat to a national flag is to *salute* it, and by saluting it one honors it [illegible] way prescribed by etiquette, social or m[illegible] as the case may be. Therefore, "B" is ri[illegible]

"O. A. C.," Toronto, Canada.—"Whi[illegible] correct, 'He left the mail-bag *setting* on [illegible] sidewalk,' or 'He left the mail-bag *sitting* on [illegible] sidewalk'?"

Neither is correct. Either "He *set* the ma[illegible] bag *down* on the sidewalk" or "He left the ma[illegible] bag on the sidewalk" is correct. *Set* is the ver[illegible] to use, not *sit;* but *set down*, not merely *set*.

"H. L.," Youngstown, Ohio.—"Kindly info[illegible] me as to whether *alright* is correctly spelled with one or two l's."

All right (two words) is the correct form and spelling. *Alright* and *allright* are incorrect forms.

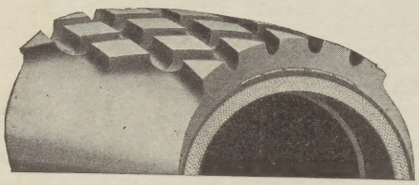
EAGER TOURS, 308 N. Charles St., Baltimore

Four Features

Found in No-Rim-Cut Tires Alone

They Have Made These Tires—by Long Odds—the Largest-Selling Tires in the World



All-Weather Treads

The latest Goodyear invention. As smooth as a plain tread on dry roads, a resistless grip on wet. A tread for all wheels at all seasons.

A double-thick tread made of very tough rubber. The grips are deep and enduring. They last for thousands of miles. The edges stay sharp. They face the skidding direction, which is 45 degrees.

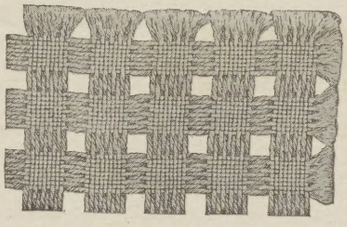
The blocks widen out to distribute the strains, just as with plain tread tires. They are flat, broad and regular, giving the smoothness of plain treads. Yet they supply, when needed, a tenacious grip.

Rim-Cutting Ended

The tire base embodies six flat bands of 126 braided wires. These make the tire base unstretchable. So No-Rim-Cut tires do not hook to the rim. You set your rim flanges to curve outward, not inward.

This makes rim-cutting impossible. It gets rid of the greatest tire ruin. Statistics show that with old-type tires almost one tire in three is discarded for rim-cuts only.

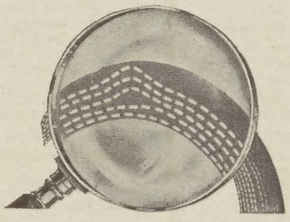
This braided wire feature, which we control, is the only feasible way which has ever been found to make a tire of this wanted type.



Saves Loose Treads

This patent open fabric forms our breaker strip. In other tires, this breaker strip—at the base of the tread—is rather closely woven. It is near this point that tread separation comes.

We force the tread rubber down through these openings, forming hundreds of large rubber rivets. Then the whole tire is vulcanized en masse. This adds sixty per cent, by actual test, to resistance against loose treads.



No Wrinkled Fabric

Countless blow-outs are caused by wrinkled fabric, due to vulcanizing under pressure on an iron core alone. The picture shows the result of this, and why these weak spots blow out.

To eliminate this, we final-cure each tire on air bags shaped like inner tubes. This stretches the fabric and adapts it to actual road conditions. This extra process, to save you blow-outs, adds to our tire cost $1,500 daily. And no other maker does it.

Thus we combat the four greatest troubles found with modern tires. By these exclusive, costly features we have saved motor car owners many millions of dollars.

By them we also won the topmost place in Tiredom. No-Rim-Cut tires are now by far the most popular tires in existence.

GOODYEAR
AKRON, OHIO

No-Rim-Cut Tires
With All-Weather Treads

They cost no more than other standard tires. This is due to our matchless output. Men used to pay for them, when our output was smaller, one-fifth over other prices.

You will buy these tires when you know them. No other tire offers one of these features. No-Rim-Cut tires offer them all.

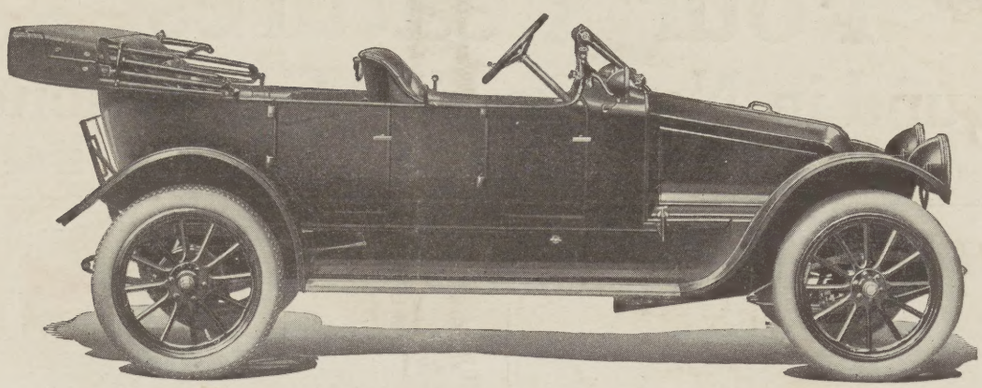
The Franklin Six-Thirty



Engine and vehicle patented July 2, 1908

Franklin Six-Thirty Five-Passenger Touring, $2300

LIGHT weight is the foundation for economy. Gasoline mileage, tire mileage and comfort are all intimately connected to weight. Scientific heat treatment of materials makes it possible to secure great strength from comparatively light weight, so that light weight with strength, which means greater ability and greater economy, is largely a matter of design.

Automobile economy is a modern idea. From an expensive luxury to an economical convenience is a big step.

The most economical engine made can never give low cost of operation, if, to move a certain number of passengers, it also has to move a body and chassis of excessive weight. But an economical engine in a light car, designed to absorb road shocks, will give a low operating cost and comfort that results in the highest total satisfaction.

Tire trouble as it goes today is not an accident; it is a logical result. Anything overloaded is over-strained and gives out. Tires have an elastic limit beyond which it is not safe to work them. The Franklin is so designed that the tires give the same factor of reliability as the other parts of the car. The car, light and resilient, is equipped with large tires. Not only are the tires not overloaded, but they are not pounded, because the resilient construction of the car takes up the road shocks.

Leaving out the question of operating cost, a light car is best because it is safe, comfortable and easy to drive.

The Franklin Six-Thirty (6 cylinders, 30 horsepower) is a light-weight, medium-sized car. Anyone who can afford to buy a good car can afford to run the Six-Thirty. The weight of the five-passenger touring car is 2725 pounds with full equipment. The tires are 4½ inches; wheel base, 120 inches. The wood chassis frame, lighter and stronger than steel, and full-elliptic springs in the front and in the rear, give easy balanced riding and save the car and tires. The direct-cooled engine is unaffected by weather conditions. There is no freezing in winter nor overheating in summer. The car is ready to use 365 days in the year.

The Six-Thirty is made with six body styles, all interchangeable on the same chassis. All bodies are aluminum. Prices and weights, fully equipped, are as follows:

Type	Price	Weight
Touring car -	$2300	2725 pounds
Roadster -	2300	2630 "
Coupe - -	2950	2788 "
Sedan - -	3200	2924 "
Limousine -	3300	2927 "
Berlin - -	3400	3121 "

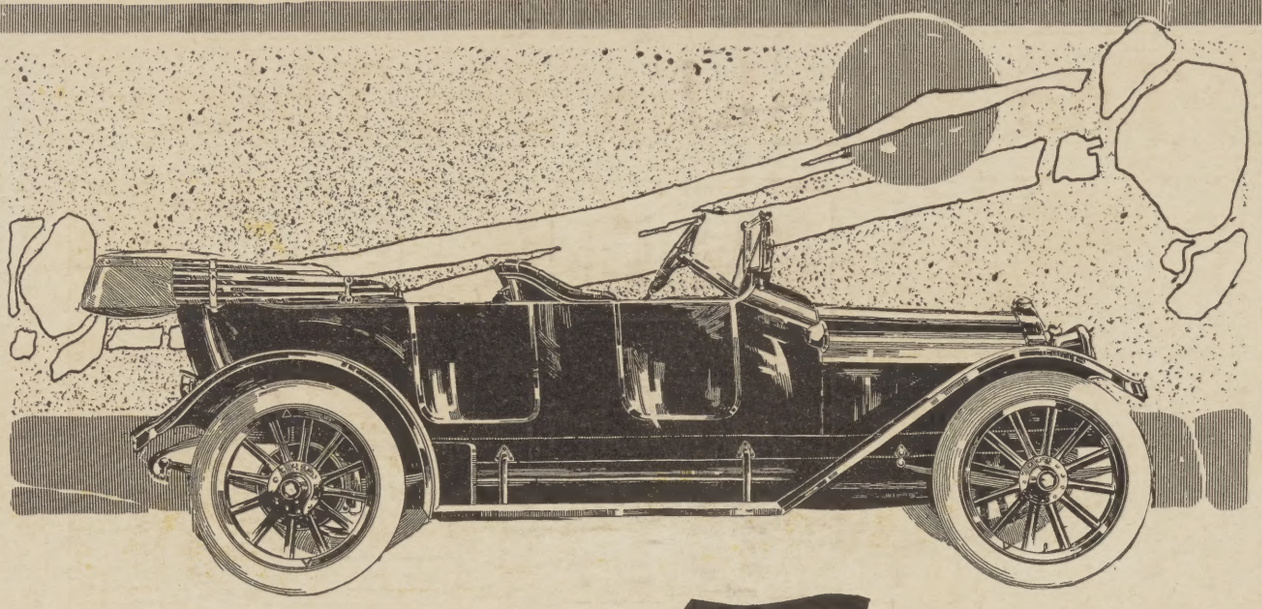
Prices are f. o. b. Syracuse, N. Y.

Simplicity in construction and operation are the things to look for in automobile electric starting and lighting systems. The Six-Thirty is equipped with the Entz system. This system consists of a motor-generator, storage battery, switch and wiring, all simple in themselves. The motor-generator is direct driven by a silent chain from the engine crank shaft. Starting the engine is simplicity itself—just throw the switch. There are no gears, pedals or buttons to work and no automatic device of any kind to look after. The switch that controls the starting also controls the magneto. While the switch is "on" the motor cannot stall.

Franklin dealers everywhere are showing the car.

Catalogue sent to any address.

FRANKLIN AUTOMOBILE COMPANY Syracuse New York



Overland $950

Completely Equipped

With electric starter and generator—$1075. Prices f. o. b. Toledo

A Revision of Prices Downward

FOUR years ago we marketed a much smaller car, than our 1914 model, for $1250. And this was a bare car—with no equipment.

Today we offer you a much *larger* car in every respect, refined right-up-to-date and completely equipped, for only $950—25% less than our price four years ago.

Four years ago the wheel base was shorter, the tires smaller, the motor smaller, in fact every essential part of the car represented less value. In addition to that, you had to pay extra for all of the equipment.

Today every individual unit is larger than heretofore. Yet the price is 25% under the market of four years ago; is 30% under the present market and has fully 200% greater value.

All of which is accounted for by our gigantic production which has been increased each succeeding season. For 1914 we will build 50,000 cars. And a production of this size is the sole explanation, for it makes possible the numerous economies which *increase* values and *decrease* prices.

Check our price reductions and car enlargements and refinements during the last four years. The facts will astonish you!

Then call on the nearest Overland dealer and minutely examine the 1914 Overland.

And, most advantageous of all, the Overland is the most economical car on tires, gasoline and oil.

There is an Overland dealer near you. 'Phone him for a demonstration today.
